Interactive catalog CA 01 - Drive Technology Configurator

The **Drive Technology Configurator** (DT Configurator) is available in conjunction with the electronic catalog CA 01 on DVD.

In addition, the DT Configurator can be used on the Internet without requiring any installation.

The DT Configurator can be found in the Industry Mall at the following address:

www.siemens.com/dt-configurator

The Drive Technology Configurator for gear units, motors, mechanical components, converters, connection systems, control and licenses and system configuration can be found in the CA 01 main menu, under drive systems, selection and engineering tools.

- Data sheets in up to 7 languages in PDF or RTF format
- 2D/3D dimensional drawings in various formats
- Terminal box drawing and terminal connection diagram
- Operating instructions
- Certificates
- Start-up calculation for SIMOTICS motors
- EPLAN macros

System requirements for CA 01 installation with Drive Technology Configurator

- PC with 2 GHz CPU or faster
- 2 GB RAM
- Windows 7 / Windows 8.1 / Windows 10
- Screen resolution 1024 x 768 pixels or higher (1280 x 1024 recommended)
- 8.5 GB of free hard disk space (full installation)
- 2.0 GB of free hard disk space for each additional data package (optional)

Installation

The CA 01 catalog can be directly installed on the hard disk or in the network from the DVD as a partial or full version.

Copper surcharges

The metal factors that are applicable for the copper surcharges are specified in the headers of the current Price List D 81.1 P. Further information about "Metal surcharges" can be found in the appendix to this catalog.

Digital Enterprise

The building blocks that ensure everything works together perfectly in the digital enterprise

Digitalization is already changing all areas of life and existing business models. It is placing greater pressure on industry while at the same time creating new business opportunities. Today, thanks to scalable solutions from Siemens, companies can already become a digital enterprise and ensure their competitiveness.

Industry faces tremendous challenges

Reduce time-to-market

Today manufacturers have to bring products to market at an ever-increasing pace despite the growing complexity of these products. In the past, a major manufacturer would push aside a small one, but now it is a fast manufacturer that overtakes a slow one.

Boost flexibility

Consumers want customized products, but at a price they would pay for a mass-produced item. That only works if production is more flexible than ever before.

Improve quality

To ensure a high level of quality while meeting legal requirements, companies have to establish closed quality loops and enable the traceability of products.

Boost efficiency

Today the product itself needs to be sustainable and environmentally friendly, while energy efficiency in production has become a competitive advantage.

Increase security

Increasing networking escalates the threat to production facilities of cyberattacks. Today more than ever, companies need suitable security measures.

The digital enterprise has already become a reality

To fully benefit from all the advantages of digitalization, companies first have to achieve complete consistency of their data. Fully digitally integrated business processes, including those of suppliers, can help to create a digital representation of the entire value chain. This requires

- the integration of industrial software and automation,
- expansion of the communication networks,
- security in automation,
- and the use of business-specific industrial services.

MindSphere

The cloud-based open IoT operating system from Siemens

With MindSphere, Siemens offers a cost-effective and scalable cloud platform as a service (PaaS) for the development of applications. The platform, designed as an open operating system for the Internet of Things, makes it possible to improve the efficiency of plants by collecting and analyzing large volumes of production data.

Totally Integrated Automation (TIA)

Where digitalization becomes reality

Totally Integrated Automation (TIA) ensures the seamless transition from the virtual to the real world. It already encompasses all the necessary conditions for transforming the benefits of digitalization into true added value. The data that will form the digital twin for actual production is generated from a common base.

Integrated Drive Systems

Faster on the market and in the black with Integrated Drive Systems

Integrated Drive Systems are Siemens' trendsetting answer to the high degree of complexity that characterizes drive and automation technology today. The world's only true one-stop solution for entire drive systems is characterized in particular by its threefold integration: Horizontal, vertical, and lifecycle integration ensure that every drive system component fits seamlessly into the whole system, into any automation environment, and even into the entire lifecycle of a plant.

The outcome is an optimal workflow – from engineering all the way to service that entails more productivity, increased efficiency, and better availability. That's how Integrated Drive Systems reduce time to market and time to profit.

Horizontal integration

Integrated drive portfolio: The core elements of a fully integrated drive portfolio are frequency converters, motors, couplings, and gear units. At Siemens, they're all available from a single source. Perfectly integrated, perfectly interacting. For all power and performance classes. As standard solutions or fully customized. No other player in the market can offer a comparable portfolio. Moreover, all Siemens drive components are perfectly matched, so they are optimally interacting.

You can boost the availability of your application or plant to up to

99%*
*e.g., conveyor application

Vertical integration

Thanks to **vertical integration**, the complete drive train is seamlessly integrated in the entire automation environment – an important prerequisite for production with maximum value added. Integrated Drive Systems are part of Totally Integrated Automation (TIA), which means that they are perfectly embedded into the system architecture of the entire industrial production process. This enables optimal processes through maximum communication and control.

With TIA Portal you can cut your engineering time by up to

30%

Lifecycle integration

Lifecycle integration adds the factor of time: Software and service are available for the entire lifecycle of an Integrated Drive System. That way, important optimization potential for maximum productivity, increased efficiency, and highest availability can be leveraged throughout the system's lifecycle – from planning, design, and engineering to operation, maintenance, and all the way even to modernization.

With Integrated Drive Systems, assets become important success factors. They ensure shorter time to market, maximum productivity and efficiency in operation, and shorter time to profit.

With Integrated Drive Systems you can reduce your maintenance costs by up to

15%

SIMOTICS motors

With SIMOTICS, Siemens has the most comprehensive portfolio of electric motors worldwide. From energy-efficient, low-voltage motors through servomotors with high dynamic performance up to well-proven DC motors and powerful high-voltage motors. Innovative drive technology for all industries, applications and power classes.

Outstanding performance, quality, efficiency, and compactness.

The SIMOTICS motor portfolio:

- SIMOTICS low-voltage motors for line and converter operation:
For standard applications with low to high motor power ratings
- SIMOTICS Motion Control motors:
For highly dynamic and extremely precise applications in mechanical engineering
- SIMOTICS DC motors:
For DC applications
- SIMOTICS high-voltage motors:
For line and converter operation in standard applications with high to very high motor power ratings

SIMOTICS low-voltage motors for line and converter operation

SIMOTICS low-voltage motors are the right choice for solving drive tasks efficiently and reliably. In contrast to Motion Control motors, which are additionally characterized by very high dynamic response and precision, the more favorably priced low-voltage motors are predestined for continuous or periodic, as well as powerful motions with fixed or variable speed, such as in pumps, fans, compressors, conveyor belts, lifts, hoisting and traversing gear, winders, mixers, kneaders and centrifuges.

SIMOTICS low-voltage motors are characterized by very high reliability, ruggedness, and efficiency in operation.

They are available in diverse series and versions, which means that the appropriate motor can always be found for any application in an industrial or commercial environment, as well as in building management systems, shipbuilding and infrastructure.

SIMOTICS low-voltage motors comply with the most important relevant standards and guidelines and are available in IEC, NEMA, and APAC versions. They can be used all over the world, and have a global long-term spare parts service. For these reasons, they provide a sustainable basis for export-oriented, globally operating companies to enable them to conduct their international business efficiently.

Overview (continued)

SIMOTICS GP – General Purpose motors are the most economical solution for use under standard environmental conditions. Typically, these motors have an aluminum housing and are characterized by their low weight. SIMOTICS GP motors are available in the power range from 0.09 to 45 kW.

Available motor variants:

- Induction motors, optimized for line operation
 - in efficiency classes IE4, IE3, IE2, IE1
 - as a standards-compliant version or compact version with increased power (IE3, IE2, IE1)
 - as a 2, 4, 6, 8-pole version
 - as pole-changing motors
 - as an APAC version for use in the ASEAN Pacific region (IE3, IE2)
 - as a NEMA version for use in the NAFTA area
 - electrically (mechanically acc. to IEC): Eagle Line
 - electrically and mechanically
 - can optionally be run on a converter
- Motors optimized for operation on frequency converters
 - as a SIMOTICS GP – VSD10 line induction motor
 - as a SIMOTICS GP – VSD4000 line synchronous reluctance motor for particularly efficient operation in conjunction with SINAMICS converters.
- Different types of construction, voltage versions, and a wide variety of options/add-ons for precise adaptation of the motors to application and customer-specific requirements.

SIMOTICS SD – Severe Duty motors have a rugged cast-iron housing, which means they are also suitable for use in harsh to very harsh environments. With a wide power range from 0.09 to 500 kW, SIMOTICS SD motors are the basis for machine and plant builders and owners who require a universal motor for flexible requirements and conditions of use.

Available motor variants:

- Induction motors, optimized for line operation
 - in efficiency classes IE4, IE3, IE2, IE1
 - standards-compliant version or compact version with increased power (IE3, IE2, IE1)
 - as a 2, 4, 6, 8-pole version
 - as an APAC version for use in the ASEAN Pacific region (IE3, IE2)
 - as a NEMA version for use in the NAFTA area
 - electrically (mechanically acc. to IEC): Eagle Line
 - electrically and mechanically
 - can optionally be run on a converter
- Motors optimized for operation on frequency converters
 - as a SIMOTICS SD – VSD10 line induction motor
 - as a SIMOTICS SD – VSD4000 line synchronous reluctance motor for particularly efficient operation in conjunction with SINAMICS converters.
- Basic Line and particularly rugged Performance Line
- Different types of construction, voltage versions, and a very wide variety of options/add-ons for precise adaptation of the motors to application and customer-specific requirements.

SIMOTICS – next generation is the next innovation step in low-voltage motors. In particular, these motors offer the following advantages for customers:

- More efficiency in the engineering process due to the Digital Twin Concept.
- Further increase in availability due to the Smart Motor Concept.

SIMOTICS XP – Explosion Proof motors are designed for use in hazardous environments. For all conditions of use and hazard zones, e.g. in explosive gas atmospheres of the chemical/petrochemical sector or in explosive dust atmospheres in the mining or food and beverage sectors, there are suitable motor versions in aluminum and cast iron that ensure maximum safety and satisfy the relevant standards and regulations.

SIMOTICS XP motors are available in the power range from 0.09 to 200 kW.

Available motor variants:

- Motors for use in Zones 2, 21, and 22.
- Induction motors optimized for line operation
 - in efficiency classes IE3, IE2, IE1
 - as a 2, 4, 6, 8-pole version
 - as a NEMA version for use in the NAFTA area
- Motors suitable for line and converter operation
- Basic Line and particularly rugged Performance Line in a cast-iron housing
- Different types of construction, voltage versions, and a wide variety of options/add-ons for precise adaptation of the motors to application and customer-specific requirements.

SIMOTICS DP – Definite Purpose motors are low-voltage motors for application-specific, customized and industry-specific use.

They have the required respective industry-specific properties and certificates.

SIMOTICS DP motors:

- Crane motors for use in cranes (primarily for hoisting gear)
- Marine motors for use on ships
- Steel plant motors for use in the steel industry
- Roller table motors for roller table applications in the steel industry
- Smoke extraction motors for use in smoke extraction applications

SIMOTICS FD – Flexible Duty motors have been optimized for converter operation to flexibly address applications in power ranges extending from 200 to over 1600 kW. These are available with various cooling methods (air cooling, water cooling).

SIMOTICS TN – Transnorm motors are low-voltage motors for line and converter operation in a cast-iron housing with higher power ratings up to 5000 kW from shaft height 315. In non-standard (Transnorm) motors, the assignment of the power rating and shaft extensions to frame size is not standardized.

SIMOTICS HT – High Torque motors are permanent magnet synchronous motors and are used in applications that require extremely powerful drives without gear units, even at low speeds.

SIMOTICS Digital Data App

Overview

The SIMOTICS Digital Data App provides access to technical data, spare part information, and operating instructions for SIMOTICS GP/SD motors any time any place. This gives our customers quick access to important contents of the digital twin, which simplifies and optimizes the customer's processes. By scanning the data matrix code on the additional rating plate of the motor, the relevant electrical and mechanical data can be displayed for this motor.

- Electronic and mechanical rating plate data
- Additional motor data
- Service information, e.g. display of the spare part list
- Display of the ordering options installed
- Documentation and manuals

The SIMOTICS Digital Data App is available for Apple and Android devices and can be installed from the respective stores. To do this, please scan the appropriate QR code.

Benefits

- Shorter commissioning and service times
- Fast access to relevant service information
- Online availability of the motor data for integration into ERP systems

Scan the QR code
for the SIMOTICS
Digital Data App.

AGMA

Overview

Harmonization of the efficiency classes

Various energy efficiency standards exist worldwide for induction motors. To promote global standardization, the international standard IEC 60034-30-1:2014 (Rotating electrical machines – Part 30-1: Efficiency classes of single-speed, three-phase, cage-induction motors (IE code) were defined and are used as the basis for local standards in most countries. Only the NAFTA countries USA, Canada, and Mexico use the differing standards of NEMA MG1. Standard IEC 60034-30-1:2014 divides low-voltage induction motors into new efficiency classes IE1 to IE4, which supersede the efficiency classes EFF2 and EFF1 previously valid in the EU.

Applicability (excerpt)

- Low-voltage motors up to 1000 V (50/60 Hz in line operation)
- Power rating: 0.12 to 1000 kW; with 2, 4, 6, or 8-poles
- Operating mode: S1

The efficiencies in IEC 60034-30-1 are based on the method for determining losses according to IEC 60034-2-1:2014.

IE efficiency classes

The efficiency classes are grouped according to the following nomenclature (IE = International Efficiency):

- IE1 (Standard Efficiency)
- IE2 (High Efficiency)
- IE3 (Premium Efficiency)
- IE4 (Super Premium Efficiency)

IEC 60034-30-1 EU and other countries	NEMA MG1 NAFTA (USA, Canada, Mexico)	GB 18613-2012 China
IE4 ¹⁾		Grade 1 (IE4)
IE3	Premium Efficient (60 Hz)	Grade 2 (IE3)
IE2	Energy Efficient (60 Hz)	Grade 3 (IE2)

Comparison of IE efficiency classes

Note:

All efficiency classes are stated with reference to 50 Hz data (unless specified otherwise).

Measuring method according to IEC 60034-2-1:2014 for determining the efficiency

With this measuring method, motor losses are no longer applied as a percentage, but are determined by standard methods. The nominal efficiencies are therefore reduced from EFF1 to IE2 and from EFF2 to IE1, even though there have been no technical or physical changes to the motors.

Previously: $P_{LL} = 0.5 \% \text{ of } P_1$ (power drawn; IEC 60034-2)

Now: $P_{LL} = \text{individual measurement (IEC 60034-1)}$

$P_{LL} = \text{additional load losses}$

IE1-IE4 efficiencies, 4-pole 50 Hz, depending on the power

Minimum efficiencies according to IEC 60034-30-1:2014

¹⁾ Defined in IEC/TS 60034-31.

Introduction

Information regarding efficiency in accordance with International Efficiency

Efficiency classes and efficiencies according to IEC 60034-30-1

Overview (continued)

Background information

Comprehensive laws have been introduced in the European Union with the objective of reducing energy consumption and therefore CO₂ emissions. EU Directive 640/2009 concerns the energy consumption or efficiency of induction motors in the industrial environment. This Directive is now in force in every country of the European Economic Area.

For further details on internationally applicable standards and legal requirements, visit:

www.siemens.com/international-efficiency

Exceptions to the EU Directive

- Motors that are designed to be operated totally submerged in a liquid;
- Motors fully integrated into a product (e.g. a gear unit, pump, fan or compressor) whose energy efficiency cannot be measured independently of the product;
- Motors that are specially designed for operation under the following conditions:
 - At altitudes greater than 4000 meters above sea level;
 - At ambient temperatures above 60 °C;
 - At maximum operating temperatures above 400 °C;
 - At ambient temperatures below -30 °C
 - With cooling liquid temperatures at the product intake of below 0 °C or above 32 °C;
 - In hazardous areas in the context of Directive 94/9/EU of the European Parliament and Council;
- Brake motors

The following motors are not involved:

- Pole-changing motors
- Synchronous motors
- Motors for intermittent duty S2 to S9
- Single-phase motors
- Motors specially developed for converter operation in accordance with IEC 60034-25

The following changes came into effect on the dates below:

From January 1, 2015:

Compliance with the legally required minimum efficiency class IE3 for power ratings from 7.5 to 375 kW or, as an alternative, IE2 motor plus frequency converter.

From January 1, 2017:

Compliance with the legally required minimum efficiency class IE3 for power ratings from 0.75 to 375 kW or, as an alternative, IE2 motor plus frequency converter.

Changes according to EU motor regulation 640/2009

Low-voltage motors with a power rating of 0.75 kW to < 7.5 kW, from January 1, 2017, and low-voltage motors with a power ranging from 7.5 kW to 375 kW with efficiency class IE2, have been labeled as follows since January 1, 2015:

IE2 EU REGULATION 640 / 2009
USE WITH VARIABLE
SPEED DRIVE ONLY!

This obligation applies only within the European Economic Area. Correct application is the sole responsibility of the customer.

Other potential restrictions as described in the technical documentation may apply to converter operation and must be taken into account!

The following are generally recommended for converter operation:

- Motor temperature detection by embedded temperature sensor
- Bearing insulation with frame size 225 and larger

Motor series SIMOTICS VSD10 (1LE1092/1LE1592), VSD4000 (1FP10/1FP15) and SIMOTICS FD (1LH1) are the preferred motor types for converter operation.

Note:

Different minimum efficiency class requirements apply in China, Korea, and Australia. Other countries will be available soon.

Motors for the North American market

The Energy Policy Act (EPAAct) was superseded in December 2010 by the Energy Independence Security Act (EISA).

The following motors must fulfill the NEMA Premium Efficient Level:

- 1 hp (0.75 kW) ... 500 hp (373 kW): 2, 4-pole
- 1 hp (0.75 kW) ... 350 hp (261 kW): 6-pole
- 1 hp (0.75 kW) ... 250 hp (186 kW): 8-pole
- 2, 4, 6 and 8-pole
- ≤ 600 V
- NEMA Design A, B, or C. IEC Design N or H

For details, see NEMA MG1, Table 12-11 and Table 12-12.

Abbreviations

NEMA: National Electrical Manufacturers Association

IEC: International Electrotechnical Commission

EEA: European Economic Area

Overview

Steps for drive selection

Step 1	Orientation and general technical information		
Technical requirements for the motor	Rated frequency and rated voltage	3 AC 50/60 Hz, 400, 500 or 690 V	
	Operating mode	Standard duty (continuous duty S1 according to EN 60034-1)	
	Degree of protection or type of explosion protection required	IP..	
	Rated speed (No. of poles)	$n = \dots\dots\dots$ rpm	
	Rated power	$P = \dots\dots\dots$ kW	
	Rated torque	$T = P \cdot 9550/n = \dots\dots\dots$ Nm	
	Type of construction	IM..	
Step 2	Preselection in accordance with the application		
Determination of the installation conditions and definition of the application, if necessary	Ambient temperature	$\leq 40\text{ }^{\circ}\text{C}$	$> 40\text{ }^{\circ}\text{C}$
	Installation altitude	$\leq 1000\text{ m}$	$> 1000\text{ m}$
	Factors for derating	None	Determine the factor for derating (for reduction factor, see "Coolant temperature and installation altitude" on Page 1/35)
Cross-reference to other motors	These can be LOHER motors for special requirements in the area of explosion protection and applications or motors to the NEMA standard		
Step 3	Preliminary selection of the motor		
Determination of the range of possible motors	Select the frame size and therefore the possible motors on the basis of the following parameters: cooling method, degree of protection, rated power, rated speed and rated torque range.		
	Note: The standard temperature range of the motors is from -20 to +40 °C.		

Layout of the selection and ordering tables and description of the columns of the table headers

Power, frame size, temperature class			Operating values at rated power														Article No., add. data			
Table header – Meaning																				
P_{rated} , 50 Hz	P_{rated} , 60 Hz	P_{rated} , 60 Hz	Frame size	n_{rated} , 50 Hz	T_{rated} , 50 Hz	Differ- ent IE class	CC No. CC032A	η_{rated} , 50 Hz, 4/4	η_{rated} , 50 Hz, 3/4	η_{rated} , 50 Hz, 2/4	COS- φ_{rated} , 50 Hz, 4/4	I_{rated} , 50 Hz, 400 V	$T_{\text{LR}}/$ T_{rated}	$I_{\text{LR}}/$ I_{rated}	$T_{\text{B}}/$ T_{rated}	L_{pA} , 50 Hz	L_{WA} , 50 Hz	Article No.	m IM B3	J
kW	kW	hp	FS	rpm	Nm			%	%	%		A				dB (A)	dB (A)		kg	kgm ²
Rated power at 50 Hz	Rated power at 60 Hz	Rated power at 60 Hz	Frame size	Rated speed at 50 Hz	Rated torque at 50 Hz	Efficiency class according to IEC 60034-30-1	CC No. CC032A	Efficiency at 50 Hz, 4/4-load	Efficiency at 50 Hz, 3/4-load	Efficiency at 50 Hz, 2/4-load	Power factor at 50 Hz, 4/4-load	Rated current at 400 V, 50 Hz	Locked-rotor torque on direct switch-on as a multiple of the rated torque	Locked-rotor current on direct switch-on as a multiple of the rated current	Breakdown torque on direct switch-on as a multiple of the rated torque	Measuring-surface sound pressure level at 50 Hz	Sound power level at 50 Hz	Article number	Weight for type of construction IM B3, approx.	Moment of inertia

Legend:

Primary key
Standard values for all motors
Specially for NEMA Energy Efficient MG1 motors, Table 12-11 or NEMA Premium Efficient MG1 motors, Table 12-12

Note on pole-changing motors:

The operating values are specified here for the rated power for the two different pole numbers.

Step 4	Detailed selection of the motor in the selection and ordering data tables	
Determination of the basic Article No. of the motor	Determine the motor Article No. according to the following parameters: rated power, rated speed, rated torque and rated current from the "Selection and ordering data" for the motors that have already been identified as possibilities.	
Step 5	Selection of the special versions or options	
Completing the motor Article No.	Determine special versions and the associated order codes (e.g. special voltages and types of construction, motor protection and degrees of protection, windings and insulation, colors and paint finish, mountings and mounting technology, etc.).	
Step 6	Additional information for motor selection	
Checking the required dimensions	The dimensions are specified in each catalog section under the heading of "Dimensions".	
Selection of the frequency converter, if required	Article No. of the converter as well as its selection, see Catalogs D 11, D 18.1, D 21.3, D 31, and DA 51.2.

Introduction

Guide to selecting and ordering the motors

Special versions

Overview

The following table contains a list of all available special versions according to category and availability in the catalog sections where you will find them. The order codes are listed here according to the function. An alphanumerical listing of all special versions can be found in the Appendix in the Index of order codes.

Note:

Options cannot always be freely combined. It is not possible to describe every single impermissible option combination in the catalog. Incompatibility between options may result in rejection of an order when multiple options are ordered, see also in the DT Configurator:

www.siemens.com/dt-configurator

Special versions	Additional identification code -Z with order code and plain text if required	For further information, see page	Catalog section – page								
			2 Standard motors		3	4 VSD motors for converter operation		5 Explosion-proof motors		6 Smoke extraction motors	
			Alumi-num series 1LE10	Cast-iron series 1LE15 1LE16	Cast-iron series 1LE5	Alumi-num series 1FP10.4 1LE1092	Cast-iron series 1FP15.4 1LE1592	Alumi-num series 1MB10	Cast-iron series 1MB15 1MB16	Alumi-num series 1PC1300 1PC1303	Cast-iron series 1PC1301 1PC1304
Version for converter operation											
Version for converter operation in basic version with operating data SINAMICS G120 with PM240-2.	B40	5/7						5/38	5/42		
Version for converter operation in basic version with operating data SINAMICS S150.	B41	5/7						5/38	5/42		
Operating data such as order code B40 with alternative SINAMICS converters on the rating plate • G120 with PM230 • G120 with PM240 • G120C • G120P with PM230 • G120P with PM240-2 • G120P with PM240P-2 • G120P with PM330 • G130, G150, G180 • S120 (BLM/SLM) • V20 Operating data such as the B41 order code with alternative SINAMICS converter on the rating plate • S120 (ALM)	Y68 and converter type	5/7						5/38	5/42		
Version in accordance with standards and specifications											
VIK version	C02	1/28	2/105	2/113							
CCC China Compulsory Certification	D01	1/27	2/105	2/113		6/21					
Motor without CE marking for export outside EEA (see EU Directive 640/2009)	D22		2/105	2/113	3/25						
Motor exclusively for use in transportation equipment for passengers and freight transport corresponding to EVPG §1 dated February 27, 2008	D23				3/25						
Electrical according to NEMA MG1-12	D30	1/26	2/105	2/113	3/25						
Design according to UL with "Recognition Mark"	D31	1/26	2/105	2/113	3/25						
Ex certification for China	D32	New!						5/44			
KEMCO Korea Energy Efficiency Label	D33	1/27	2/105	2/113							
China Energy Efficiency Label	D34	1/27	2/105	2/113				5/44			
Ex certificate EAC for the Eurasian customs union	D35	5/14					5/39	5/44			
IEC Ex certification	D37						5/39	5/44			
Version according to UL and CSA (Canadian regulation)	D39					4/43 4/99	4/47 4/103				
Canadian regulations (CSA)	D40		2/105	2/113	3/25						
TR CU product safety certificate EAC for Eurasian customs union	D47	1/28	2/105	2/113	3/25	4/99	4/103				
Version suitable for railways IC 411, EN IEC 60349, without EN 45545, with external fan and fan cover in plastic	L90	1/28	2/105								
Version suitable for railways IC 411, EN IEC 60349, with EN 45545, with external fan and fan cover in metal	L91	1/28	2/105								
Version suitable for railways IC 418, EN IEC 60349, without EN 45545, without external fan and fan cover	L92		2/105								

Introduction

Guide to selecting and ordering the motors

Special versions

1

Special versions	Additional identification code -Z with order code and plain text if required	For further information, see page	Catalog section – page								
			2 Standard motors		3	4 VSD motors for converter operation		5 Explosion-proof motors		6 Smoke extraction motors	
			Alumi-num series 1LE10	Cast-iron series 1LE15 1LE16	Cast-iron series 1LE5	Alumi-num series 1FP10.4 1LE1092	Cast-iron series 1FP15.4 1LE1592	Alumi-num series 1MB10	Cast-iron series 1MB15 1MB16	Alumi-num series 1PC1300 1PC1303	Cast-iron series 1PC1301 1PC1304
Balance and vibration severity											
Vibration severity grade B	L00	1/56	2/106	2/114	3/25			5/40	5/44	6/21	6/23
Balancing without feather key	L01	1/56	2/106	2/114	3/25	4/43	4/47	5/40	5/44	6/21	6/23
Full-key balancing	L02	1/56	2/106	2/114	3/25	4/43 4/99	4/47 4/103	5/40	5/44	6/21	6/23
Explosion-proof version											
Version (IP55) for Zones 2 or 22, for non-conductive dust	B30	5/6						5/38	5/42		
Design for Zone 2 in Ex ec IIB T3 Gc	B31	5/6						5/38	5/42		
VIK version	C02	1/28						5/38	5/42		
Colors and paint finish											
Unpainted (only cast-iron parts primed)	S00	1/21	2/104	2/111	3/23	4/42 4/98	4/46 4/102	5/39	5/43	6/21	6/23
Unpainted, only primed	S01	1/21	2/104	2/111	3/23	4/42 4/98	4/46 4/102	5/39	5/43	6/21	6/23
Special paint finish C3	S02	1/21	2/104	2/111	3/23	4/42 4/98	4/46 4/102	5/39	5/43		6/23
Special paint finish sea air resistant C4	S03	1/21	2/104	2/111	3/23	4/42 4/98	4/46 4/102	5/39	5/43	6/21	6/23
Special paint finish for offshore C5	S04	1/21		2/111	3/23		4/46 4/102		5/43		
Internal coating	S05	1/21	2/104	2/111	3/23	4/42 4/98	4/46 4/102				6/23
Top coat polyurethane	S06	1/21	2/104	2/111	3/23			5/39	5/43	6/21	6/23
Paint finish in other standard RAL colors: RAL 1002, 1013, 1015, 1019, 2003, 2004, 3000, 3007, 5002, 5007, 5009, 5010, 5012, 5015, 5017, 5018, 5019, 6011, 6019, 6021, 7000, 7001, 7004, 7011, 7016, 7022, 7031, 7032, 7033, 7035, 9001, 9002, 9005	Y53 and paint finish RAL....	1/23	2/104	2/111	3/23	4/98	4/46 4/102	5/39	5/43	6/21	6/23
Paint finish in special RAL colors: For RAL colors, see "Special paint finish in special RAL colors"	Y56 and paint finish RAL....	1/23	2/104	2/111	3/23	4/42 4/98	4/46 4/102	5/39	5/43	6/21	6/23
Heating and ventilation											
Sheet metal fan cover	F74	1/36	2/106	2/115	3/26	4/43 4/99	4/48 4/104				
Fan cover for textile industry	F75	1/36	2/106			4/43 4/99					
Metal external fan	F76	1/36	2/106	2/115		4/43 4/99	4/48 4/104	5/40	5/45		
Without external fan and without fan cover	F90	1/36	2/106	2/115	3/26	4/43 4/99				6/22	6/24
Anti-condensation heating for 230 V (2 terminals)	Q02	1/36	2/106	2/115	3/26	4/43 4/99	4/48 4/104	5/40	5/45		
Anti-condensation heating for 115 V (2 terminals)	Q03	1/36	2/106	2/115	3/26	4/43 4/99	4/48 4/104	5/40	5/45		
Anti-condensation heating for 400 V (2 terminals)	Q06	New!			3/26						
Separately driven fan with non-standard voltage and/or frequency	Y81 and customer specifications	1/80		2/115	3/26		4/104				
Coolant temperature and installation altitude											
Coolant temperature –50 to +40 °C	D02			2/113	3/25		4/47 4/103				
Coolant temperature –40 to +40 °C	D03	1/35	2/105	2/113	3/25	4/42 4/98	4/47 4/103	5/39	5/44		
Coolant temperature –30 to +40 °C	D04	1/35	2/105	2/113	3/25	4/42 4/98	4/47 4/103			6/21	6/23
Bearings and lubrication											
Regreasing device with M10 x 1 grease nipple according to DIN 71412-A	L19	1/59	2/105	2/114	3/25				5/44		6/23
Located bearing DE	L20	1/58	2/105	2/114	3/25	4/43 4/99	4/47 4/103	5/40	5/44		
Located bearing NDE	L21	1/58	2/105	2/114		4/43 4/99	4/47 4/103	5/40	5/44		
Bearing design for increased cantilever forces	L22	1/58	2/105	2/114	3/25	4/43 4/99	4/47 4/103	5/40	5/44	6/21	6/23
Regreasing device	L23	1/59	2/105	2/114		4/43 4/99	4/47 4/103	5/40	5/44	6/21	6/23

Introduction

Guide to selecting and ordering the motors

Special versions

Special versions	Additional identification code -Z with order code and plain text if required	For further information, see page	Catalog section – page									
			2 Standard motors		3	4 VSD motors for converter operation		5 Explosion-proof motors		6 Smoke extraction motors		
			Alumi-num series 1LE10	Cast-iron series 1LE15 1LE16	Cast-iron series 1LE5	Alumi-num series 1FP10.4 1LE1092	Cast-iron series 1FP15.4 1LE1592	Alumi-num series 1MB10	Cast-iron series 1MB15 1MB16	Alumi-num series 1PC1300 1PC1303	Cast-iron series 1PC1301 1PC1304	
Bearings and lubrication (continued)												
Hot bearing grease	L24	New!			3/25							
Bearings reinforced at both ends for DE and NDE, bearing size 63	L25		1/58	2/105	2/114		4/43 4/99	4/47 4/103	5/40	5/44		
Bearings reinforced at both DE and NDE, DE bearings for increased cantilever forces	L28				2/114			4/47 4/103				
Drainage for used grease	L30	New!			3/25							
Special version with higher speeds	L37	New!			3/25							
Bearing insulation DE	L50		1/58		2/114	3/25		4/103			6/21 6/23	
Bearing insulation NDE	L51		1/58		2/114	3/25		4/103		5/44	6/21 6/23	
Measuring nipple for SPM shock pulse measurement for bearing inspection	Q01		1/58	2/105	2/114	3/25	4/43 4/99	4/47 4/103	5/40	5/44	6/21 6/23	
Rating plate and additional rating plates												
Additional rating plate for voltage tolerance	B07		1/30	2/106	2/115	3/26					6/22 6/24	
Second rating plate, loose	M10		1/30	2/106	2/115	3/26	4/43 4/99	4/48 4/104	5/40	5/45	6/22 6/24	
Rating plate, stainless steel	M11		1/30	2/106	2/115	3/26	4/43 4/99	4/48 4/104	5/40	5/45		
Additional rating plate with deviating rating plate data	Y80 and customer specifications		1/30	2/106	2/115	3/26			5/40	5/45	6/22 6/24	
Additional rating plate with customer specifications	Y82 and customer specifications		1/30	2/106	2/115	3/26	4/43 4/99	4/48 4/104	5/40	5/45	6/22 6/24	
Additional information on rating plate and on package label (max.20 characters)	Y84 and customer specifications		1/30	2/106	2/115	3/26	4/43 4/99	4/48 4/104	5/40	5/45	6/22 6/24	
Adhesive label, supplied loose (printed with: Article No., Serial No.; 2 lines of text)	Y85 and customer specifications		1/30	2/106	2/115	3/26	4/43 4/99	4/48 4/104				
Mechanical version and degrees of protection												
Low-noise version for 2-pole motors with clockwise direction of rotation	F77		1/57	2/104	2/113	3/24			5/39	5/44		
Low-noise version for 2-pole motors with counterclockwise direction of rotation	F78		1/57	2/104	2/113	3/24			5/39	5/44		
Prepared for mountings, centering hole only	G40		1/79	2/104	2/113		4/42 4/98	4/47 4/103				
Prepared for mountings with D12 shaft	G41		1/79	2/104	2/113	3/24	4/42 4/98	4/47 4/103				
Prepared for mountings with D16 shaft	G42		1/79	2/104	2/113	3/24	4/42 4/98	4/47 4/103				
Mechanical protection for encoder	G43		1/79	2/104	2/113	3/24	4/42 4/98	4/47 4/103	5/39	5/44		
Protective cover	H00		1/50	2/105	2/113	3/24	4/42 4/98	4/47 4/103	5/39	5/44	6/21	
Screwed-on (instead of cast) feet	H01		1/41	2/105	2/113		4/42 4/98	4/47 4/103			6/21 6/23	
Vibration-proof version; vibration resistance to Class 3M4 according to IEC 60721-3-3:1994	H02		1/77	2/105	2/113	3/24	4/42 4/98	4/47 4/103	5/39	5/44		
Condensation drainage holes	H03		1/50	2/105	2/113	3/24	4/42 4/98		5/39	5/44		
Rust-resistant screws (externally)	H07		1/77	2/105	2/113	3/24	4/42 4/98	4/47 4/103	5/39	5/44	6/21 6/23	
Housing with screw mounting	H10		1/41	2/105			4/42	4/47				
IP65 degree of protection	H20		1/50	2/105	2/113	3/24	4/42 4/98	4/47 4/103	5/39	5/44	6/21 6/23	
IP54 degree of protection	H21				2/113	3/24		4/47 4/103				
IP56 degree of protection	H22		1/50	2/105	2/113	3/24	4/42 4/98	4/47 4/103	5/39	5/44	6/21 6/23	
Drive-end seal for flange-mounted motors, oil-tight to 0.1 bar	H23		1/55	2/105	2/113	3/24	4/42 4/98	4/47 4/103	5/39	5/44		
Viton sealing ring	H25	New!				3/24						
Grounding brush for converter operation	L52		1/79		2/113	3/24		4/103				

Introduction

Guide to selecting and ordering the motors

Special versions

1

Special versions		Additional identification code -Z with order code and plain text if required	For further information, see page	Catalog section – page								
				2		3	4		5		6	
				Standard motors			VSD motors for converter operation		Explosion-proof motors		Smoke extraction motors	
			Aluminum series 1LE10	Cast-iron series 1LE15 1LE16	Cast-iron series 1LE5	Aluminum series 1FP10.4 1LE1092	Cast-iron series 1FP15.4 1LE1592	Aluminum series 1MB10	Cast-iron series 1MB15 1MB16	Aluminum series 1PC1300 1PC1303	Cast-iron series 1PC1301 1PC1304	
Modular technology – Basic versions												
Mounting of holding brake (standard assignment)	F01	1/81	2/104	2/112	3/23	4/42 4/98	4/46 4/102					
Mounting of brake for higher switching frequency (operating brake)	F02	1/81	2/104			4/42 4/98						
Mounting of PRECIMA brake	F04	1/93		2/112								
Mounted separately driven fan	F70	1/80	2/104	2/112	3/23	4/42 4/98	4/46 4/102	5/39	5/43			
Mounting of 1XP8012-10 (HTL) rotary pulse encoder	G01	1/98	2/104	2/112	3/23	4/42 4/98	4/46 4/102					
Mounting of 1XP8012-20 (TTL) rotary pulse encoder	G02	1/98	2/104	2/112	3/23	4/42 4/98	4/46 4/102					
Mounting of Kübler Sendix 5020 HTL, 1024 I rotary pulse encoder	G11	1/104	2/104	2/112	3/23							
Mounting of Kübler Sendix 5020 TTL, 1024 I rotary pulse encoder	G12	1/104	2/104	2/112	3/23							
Modular technology – Additional versions												
Brake supply voltage 24 V DC	F10	1/82	2/104	2/112	3/23	4/42 4/98	4/46 4/102					
Brake supply voltage 230 V AC, 50/60 Hz	F11	1/82	2/104	2/112	3/23	4/42 4/98	4/46 4/102					
Brake supply voltage 400 V AC, 50/60 Hz	F12	1/82	2/104	2/112	3/23	4/42 4/98	4/46 4/102					
Backstop, counterclockwise motion blocked, clockwise direction of rotation	F40	1/105		2/112	3/23		4/46					
Backstop, clockwise motion blocked, counterclockwise direction of rotation	F41	1/105		2/112	3/23		4/46					
Mechanical manual brake release with lever (no locking)	F50	1/86	2/104	2/112		4/42 4/98	4/46 4/102					
Motor connection and terminal box												
External grounding	H04	1/41	2/102	2/109		4/41 4/97	4/45 4/101			6/21		
Terminal box on NDE	H08	1/41	2/102	2/109	3/21	4/41 4/97	4/45 4/101			6/21	6/23	
Second external grounding	H70	1/41		2/109	3/21		4/45 4/101					
Terminal box rotated through 90°, entry from DE	R10	1/42	2/102	2/109	3/21	4/41 4/97	4/45 4/101	5/38	5/42			
Terminal box rotated through 90°, entry from NDE	R11	1/42	2/102	2/109	3/21	4/41 4/97	4/45 4/101	5/38	5/42			
Terminal box rotated through 180°	R12	1/42	2/102	2/110	3/22	4/41 4/97	4/45 4/101	5/38	5/42	6/21	6/23	
Terminal box in position 0°; connection from right	R13	1/42	2/102			4/41 4/97				6/21	6/23	
One EMC cable gland	R14			2/110	3/22		4/45 4/101					
One metal cable gland	R15	1/43	2/102	2/110	3/22	4/41 4/97	4/45 4/101					
EMC cable gland, maximum configuration	R16			2/110	3/22		4/45 4/101					
Stud terminal for cable connection, accessories pack (3 items)	R17			2/110	3/22		4/101		5/42			
Metal cable gland, maximum configuration	R18		2/102	2/110	3/22	4/41		5/38	5/42			
Saddle terminal for connection without cable lug, accessories pack	R19			2/110	3/22		4/101		5/42			
3 cables protruding, 0.5 m long	R20	1/43	2/102	2/110		4/41 4/97						
3 cables protruding, 1.5 m long	R21	1/43	2/102	2/110	3/22	4/41						
6 cables protruding, 0.5 m long	R22	1/43	2/102	2/110		4/41 4/97						
6 cables protruding, 1.5 m long	R23	1/43	2/102	2/110	3/22	4/41						
6 cables protruding, 3 m long	R24	1/43	2/103	2/110	3/22	4/41						
Reduction piece for M cable gland in accordance with British Standard, both cable entries mounted	R30	1/43	2/103	2/110

Overview

To protect the drives against corrosion and external influences, high-quality paint systems are available in various colors.

Standard version	Additional identification code –Z with order code						
	S00	S01	S02	S03	S04	S05	S06
Paint finish, suitability of paint finish for climate group in accordance with IEC 60721-2-1							
Standard paint finish C2	Unpainted, but unfinished cast-iron surfaces are primed	Unpainted, motor primed	Special paint finish C3	Special paint finish system "sea air resistant" C4	Special paint finish system "offshore" C5	Interior paint finish, all bare internal components primed with rust inhibitor ¹⁾	Polyurethane-based top coat, can only be ordered with S03 or S04
Use							
Moderate (extended) for indoor and outdoor installation under a roof not directly exposed to weather conditions.	The motors can be supplied unpainted on request.	The motors can be supplied with just a primer coat on request.	Worldwide (global) for outdoor installation in direct sunlight and/or exposed to weather conditions.	Recommended for indoor or outdoor installation directly exposed to weather conditions, industrial climate with moderate SO ₂ exposure, VIK requirements, inshore maritime climate, but not offshore maritime climate, e.g. for crane drives and in the paper industry.	Recommended for outdoor installations exposed to direct weather conditions, industrial climate with moderate SO ₂ exposure, and offshore maritime climate, e.g. for crane drives.	The motors can be supplied with internal paint finish on request. Recommended when there is a risk of heavy condensate formation.	Exposure to direct sunlight (UV light) may cause a change in color. When color stability is a requirement, a polyurethane-based paint system is recommended for the top coat (RAL 7030). Colors other than RAL 7030 are available on request.
Test requirements according to EN ISO 12944-2 Corrosivity Category							
C2	–	–	C3	C4	C5	–	–
Total film thickness – nominal film thickness in µm ^{2) 3)}							
Motors in aluminum version							
2-K epoxy resin 30 ^{4) 5)}	–	30	60	120	–	–	–
Polyurethane/S06	–	–	–	120	–	–	Film thickness similar to S03/S04
Motors in cast-iron version							
2-K epoxy resin 60	30	60	90	150	170 ⁶⁾	–	–
Polyurethane/S06	–	–	–	150	170 ⁶⁾	–	Film thickness similar to S03/S04
Resistance							
			For corrosive atmospheres up to 1 % acid and alkali concentration or permanent dampness in sheltered rooms.	Chemical exposure up to 5 % acid and alkali concentration.	Chemical exposure up to 5 % acid and alkali concentration.		Sunlight
Temperature range							
Up to 120 °C for brief periods	–	–	Up to 140 °C for brief periods	–40 ... 140 °C	–40 ... 140 °C		
Up to 100 °C continuously			Up to 120 °C continuously				
Rel. air humidity at (temperature)							
60 % (40 °C)	–	–	100 % (40 °C)	75 % (50 °C)	75 % (60 °C)		

Table continues on the next page.

Introduction

General information

Colors and paint finish

Overview (continued)

	Additional identification code –Z with order code						
Standard version	S00	S01	S02	S03	S04	S05	S06
Suitability for recoating ⁷⁾	Can be recoated within 1 week						
Pre-treatment of parts	All parts cleaned and degreased, steel and cast-iron parts sandblasted						
Drying	All layers oven-dried						
Top coat colors							
Standard version	RAL 7030 (stone gray)						
Available colors	Alternative standard and special RAL colors must be ordered with order code Y53 or Y56 and specification in plain text of the required RAL number (see tables for order codes Y53 and Y56 on the following page for selection of available RAL numbers/RAL colors). S06 is available only in standard RAL 7030						
Treatment of bare metal areas of shaft extensions and flanges	Coated with anti-corrosion agent that repels water and palm sweat						

Note:

For transport, the bare parts are coated with anti-corrosion paint which will last for a limited amount of time.

¹⁾ Machined laminated rotor core, shaft, inner diameter of cast-iron housing, interior surfaces of cast-iron bearing plates.

²⁾ Total film thickness:

- The specified film thickness represents average values for the external motor surfaces
- Unpainted or one layer of paint (30 µm) less beneath the fan cover
- The film thickness may differ at inaccessible locations (pockets/recesses or bases of ribs)

The film thickness specified for aluminum/cast-iron versions refers not only to motors, but also to components such as the bearing plate and housing. Motors are also available in an aluminum/cast-iron composite design.

³⁾ The paint coat can become electrostatically charged where there is a thick film. Electrostatic discharges can occur. There is a risk of explosion if potentially explosive mixtures are also present at this moment. This can result in death, serious injury or material damage. When painted surfaces are recoated, one of the following conditions must be fulfilled:

- Limit the total paint film thickness according to the explosion protection group:
 - IIA, IIB: Total paint film thickness ≤ 2 mm
 - IIC: Total paint film thickness ≤ 0.2 mm for motors of group II (gas)
- Limit the surface resistance of the paint used:
 - Surface resistance ≤ 1 GΩ for motors of groups II and III (gas and dust)
- Charge transfer limit:
 - 60 nC for Group I or Group IIA devices
 - 25 nC for Group IIB devices
 - 10 nC for Group IIC devices
 - 200 nC for Group III devices
- Breakdown voltage ≤ 4 kV for explosion group III (dust only)

Note:

Paints for IIC with film thickness exceeding 200 µm are optionally available. Paints with film thickness exceeding 200 µm have been tested for electrostatic charging. Motors with a coating thickness exceeding 200 µm may only be painted over if the conditions mentioned above are complied with.

- Order code **S06** (polyurethane-based top coat) is not admissible for motors with type of protection Ex tb and Ex tc. Product has not yet been tested for electrostatic discharge in environments with explosive dusts.

⁴⁾ Aluminum motors/components without a paint finish already meet the requirements for corrosivity class C2. It is not therefore necessary to apply paint to components that are not visible. Paint is therefore applied only for the purpose of coloring.

⁵⁾ Aluminum motors with cast-iron components (e.g. DE bearing plate) have a film thickness of > 30 µm on cast-iron components.

⁶⁾ 50 µm zinc galvanized layer + 120 µm paint film thickness.

⁷⁾ Primers, water-based 2-K epoxy resin paints and polyurethane-based paints can be overpainted with paints of the same kind if the motors are in the original packaging and are still covered by the warranty. A suitability test should be conducted before any recoating work is undertaken if the customer intends to use a coating of a different kind to overpaint the motor. Alternatively, a test in accordance with EN ISO 16927 "Determination of the overcoatability and recoatability of a coating" can be requested and ordered.

Overview (continued)

**Paint finish in other standard RAL colors –
Order code Y53
(RAL number is required in plain text)**

RAL No.	Color name	RAL No.	Color name

Data apply for individual packaging. Wire-lattice pallets can be used, order code **B99**.

Safety notes

Printed German and English Operating Instructions (compact), enclosed in each wire-lattice pallet – Order code **B04**

Documentation

Printed German and English Operating Instructions enclosed with the motor are available as an option (standard documentation in PDF format can be obtained using the Drive Technology Configurator) – Order code **B04**

Test certificates

Acceptance test certificate 3.1 in accordance with **EN 10204** – Order code **B02**

An acceptance test certificate 3.1 in accordance with EN 10204 can be supplied for most motors.

Type test with temperature-rise run for horizontal motors

- **With acceptance** – Order code **B83**
- **Without acceptance** – Order code **B82**

During the type test, a temperature-rise test is performed; no-load, short-circuit, and load characteristics are recorded; the iron losses and friction losses are determined and the efficiency is calculated from the summed losses. This option is only applicable to motors with a horizontal type of construction. Acceptance testing is performed by an external representative (e.g. customer, classification society). No acceptance test is performed when order code **B82** is stated.

Extension of the liability for defects for SIMOTICS 1LE15 and 1MB15 Low-Voltage Motors

For SIMOTICS 1LE15 and 1MB15 Low-Voltage Motors, it is possible to obtain an extension of the liability for defects beyond the standard liability period.

The standard warranty period is quoted in the standard conditions of supply and delivery and is 12 months. The standard warranty period for SIMOTICS 1LE16 and 1MB16 Low-Voltage Motors is 36 months.

For the case of a new product order

With the following optional order suffixes listed in the table, extension of the liability for defects beyond the standard liability period is possible in conjunction with a new order for a product.

The markup on the product price is graded according to the duration of the extension.

Extension of the liability for defects for 1LE15 and 1MB15 motors	
Additional identification code –Z with order code	Description
Q80	Extension of liability for defects, by 12 months to a total of 24 months (2 years) from delivery
Q82	Extension of liability for defects, by 24 months to a total of 36 months (3 years) from delivery

Overview

Applicable standards and specifications

The 1LE motors comply with the IEC 60034 series of international product standards for rotating electrical machines and, in particular, those parts that are listed in the table below.

Title	IEC/EN	DIN EN
General specifications for rotating electrical machines	IEC 60034-1, IEC 60085	EN 60034-1
Specification of the losses and efficiency of rotating electrical machines	IEC 60034-2-1	EN 60034-2-1
General-purpose three-phase induction motors having standard dimensions and powers	IEC 60072 Mounting dimensions and power series only (no assignment of frame size to power)	EN 50347 Mounting dimensions according to IEC 60072 and power assignment for Europe
Starting performance of rotating electrical machines	IEC 60034-12	EN 60034-12
Terminal designations and direction of rotation for electrical machines	IEC 60034-8	EN 60034-8
Designation for types of construction, mounting, and terminal box position (IM code)	IEC 60034-7	EN 60034-7
Terminal box cable entries	–	DIN 42925
Built-in thermal protection	IEC 60034-11	EN 60034-11
Noise limits of rotating electrical machines	IEC 60034-9	EN 60034-9
IEC standard voltages	IEC 60038	IEC 60038
Methods of cooling of rotating electrical machines (IC code)	IEC 60034-6	EN 60034-6
Vibration severity of rotating electrical machines	IEC 60034-14	EN 60034-14
Vibration limits	–	ISO 10816
Degrees of protection for rotating electrical machines (IP code)	IEC 60034-5	EN 60034-5
International efficiency classes for rotating electrical machines (IE code)	IEC 60034-30-1	EN 60034-30
In addition, the following applies to Ex motors:		
General provisions	IEC/EN 60079-0	EN 60079-0
Type of protection "n" (non-sparking)	IEC/EN 60079-15	EN 60079-15
Areas containing flammable dust	IEC/EN 60079-31	EN 60079-31

The following applies to explosion-proof motors:

Since the requirements of explosion-proof motors comply with the European standards EN 60079-0, EN 60079-15, EN 60079-31 and Directive 2014/34/EU (ATEX 95), the certificates issued by authorized testing agencies (PTB, FTZU, etc.) are accepted by all member states of the EU. The remaining members of CENELEC, Switzerland in particular, also accept the certificates.

Tolerances for electrical data

According to EN 60034, the following tolerances are permitted: Motors that comply with EN 60034-1 must have a voltage tolerance of $\pm 5\%$ /frequency tolerance of $\pm 2\%$ (Design A). If this is fully utilized, the admissible limit temperature of the temperature class may be exceeded by 10 K.

Efficiency η at

$$P_{\text{rated}} \leq 150 \text{ kW: } -0.15 \cdot (1 - \eta)$$

$$P_{\text{rated}} > 150 \text{ kW: } -0.1 \cdot (1 - \eta)$$

Where η is a decimal number.

$$\text{Power factor} = \frac{1 - \cos \phi}{6}$$

- Minimum absolute value: 0.02
- Maximum absolute value: 0.07

Slip $\pm 20\%$ (for motors $< 1 \text{ kW}$ $\pm 30\%$ is admissible)

Locked-rotor current $+20\%$

Locked-rotor torque -15% to $+25\%$

Breakdown torque -10%

Moment of inertia $\pm 10\%$

Certifications

Product certifications are differentiated in terms of safety-related certificates and efficiency certificates.

Since 2011, it has been obligatory for low-voltage motors with power ratings in the range of 0.75 to 375 kW (2, 4, and 6-pole) to be classified in accordance with the IEC 60034-30-1 efficiency standard and to be marked with the corresponding IE code (International Efficiency IE1, IE2, or IE3). The efficiency is determined using the summed losses method in accordance with IEC 60034-2-1.

Introduction

General information

1

Versions in accordance with standards and specifications

Overview (continued)

Energy-saving motors for the European Economic Area in accordance with EU Directive 640/2009

Since January 2017, all low-voltage motors that fall within the scope of the EU directive must fulfill the specifications of international efficiency class IE3.

- Line voltage ≤ 1000 V
- Line frequency 50 or 50/60 Hz
- Power range 0.75 to 375 kW
- Pole number 2, 4 and 6-pole
- Continuous duty S1

IE2 motors are only admissible if they are speed-controlled via converters.

Energy-saving motors for the North-American economic area in accordance with EISA

In accordance with EISA, modified conditions have been in effect since June 1, 2016.

This law stipulates that all motors must comply with the requirements stated in NEMA MG1 Table 12-12 (NPE = Nema Premium Efficient).

From this date onwards, therefore, motors previously covered by the EPA must also comply with NPE. The NPE requirements apply to motors with the following characteristics / operating conditions:

- Line voltage ≤ 600 V
- Line frequency 60 Hz
- Power range 1 hp to 500 hp
- Number of poles: 2, 4, 6, 8-pole motors and geared motors
- Continuous duty S1

Explosion-proof motors are also included.

Exclusions from the EISA efficiency requirements:

- Brake motors
- Converter motors

Note:

Option **D30**: el. acc. to NEMA

Option **D31**: UL version

These options can be ordered for motors that are not subject to the EISA specifications (e.g. for use outside North America).

Options **D30** and **D31** do not authorize operation within North America.

The logo NEMA Premium is a registered trademark. It is only permitted to be used by companies that voluntarily submit to the control of the NEMA organization.

Approval for the USA: UL safety and DoE listing

For the USA, the motor series **1LE1.21** (NEE) and **1LE1.23** (NPE) are listed at the Department of Energy (DoE) and marked with the certification number **CC032A**.

Additional specifications to NEMA MG1: Nominal efficiency acc. to NEMA MG1 Table 12-11 or Table 12-12, design letter, code letter, CONT, CC No. CC 032A (Siemens) and service factor SF 1.15.

Motor series 1LE1.21 and 1LE1.23 remain certified up to a rated voltage of 600 V from Underwriters Laboratories Inc. and are marked accordingly ("Recognition Mark" = R/C).

CC032A

UL approval does not apply to motors for Zones 2, 21, 22 or marine motors.

Approval for Canada: CSA safety and CSA Energy Efficiency Verification

In April 2012, the EISA requirements were implemented in Canada; in this case, all powers are subject to certification without the restrictions applicable to the NEMA frame sizes. Motor series 1LE1.21 and 1LE1.23 are certified for Canada through the Canadian Standard Association (CSA), listed by the Office of Energy Efficiency (OEE) and marked with both the CSA safety logo and the CSA efficiency label. These motors comply with the efficiency requirements of the new CSA standard C390-10.

The efficiency is determined in the same manner as with IEC 60034-2-1.

Externally or internally mounted components which are used are listed by CSA or are used by manufacturers in accordance with regulations. It may have to be decided whether the motor is suitable for the application. Approval does not apply to 1MB1 motors for Zones 2, 21, 22 or marine motors.

Approval for Mexico:

The EISA regulations are applicable for Mexico.

Korea certification – Order code D33

Minimum efficiencies required by law

According to a legislative amendment with reference to the MKE-2015-28 (Ministry of Knowledge Economy Korea) dated February 12, 2015, Minimum Efficiency IE3 shall become obligatory in Korea by the following dates:

- October 1, 2015 for motors ranging from 37 to 200 kW
- October 1, 2016 for motors ranging from 200 to 375 kW
- October 1, 2018 for motors ranging from 0.75 to 37 kW

For this reason, we shall be launching the SIMOTICS GP/SD APAC series (Asia/Pacific) with efficiency class IE3, which complies with the IE3 energy efficiency requirements for line frequencies 50 Hz and 60 Hz (P50) onto this market:

- SIMOTICS GP, 2, 4, and 6-pole motors of the 1LE1043 motor series
- SIMOTICS SD, 2, 4, and 6-pole motors of the 1LE1543 and 1LE1643 motor series

Scope of Korean standard KS C 60034-2-1

This Korean standard is applicable to three-phase asynchronous motors with the following parameters:

- Voltage: ≤ 600 V
- Power supply: 60 Hz three-phase
- Rated power: 0.75 ... 375 kW
- Number of poles: 2, 4, 6 and 8
- Speed: Constant
- Coolant temperature: ≤ 40 °C
- Mounting method: Foot or flange-mounted

Overview (continued)

Korea Energy Label

Option **D33** KEMCO (Korea Energy Management Cooperation KEMCO) Korea Energy Efficiency Label can be ordered only for those motors which comply with Korean efficiency requirements. Confirmation that the motor efficiency and power factor comply with KS C 60034-2-1 is provided by certification.

The Korea Energy Label includes the following information:

- Full-load efficiency
- Motor Type (MT)
- Rated output power
- No. of poles
- CO₂ emissions per hour
- Energy costs per annum

Rating plate

KEMCO-certified motors with option code **D33** are fitted with a modified rating plate that indicates the admissible minimum energy efficiency value (P50 for 60 Hz) in accordance with the Korean Energy Efficiency Ordinance with reference to Korean Standard KS C 60034-2-1.

The energy efficiency values stipulated by KS C 60034 are identical to the international efficiency values IE (IEC 60034-30).

460 Δ	60	240	160	0.87	96.2	1791	IE3						

You will find a complete list of KEMCO-certified motors (APAC Line) on the selection tables in Chapter 2.

1PC3 motors: 1PC3 motors are also covered by certification provided that the electrical design complies with local requirements as stipulated in standard KS C 60034-2-1. Please contact QC for further clarification if required.

Motors from the APAC Line can be ordered with or without option **D33** depending on the final destination region.

Energy-saving motors for China: China Energy Label

In 2012, the directive for the China Energy Label was redefined. Applicability was extended to explosion-proof motors.

- Line voltage ≤ 1000 V
- Line frequency 50 Hz
- Power range 0.75 kW to 375 kW
- Number of poles: 2, 4, 6-pole
- Continuous duty S1

The minimum requirements for the efficiency classes previously defined in the Chinese standard GB 18613-2006 were classified in the new standard GB 18613-2012 (Minimum Allowable Values of Energy Efficiency and Energy Efficiency Grades for Small and Medium Three-Phase Asynchronous Motors) in accordance with International Efficiency IE2-4.

IEC IE class	GB 18613-2012
IE4	Grade 1
IE3	Grade 2
IE2	Grade 3
IE1	

The 1LE1 motor series for IE2 and IE3, plus order code **D34** were previously certified for China Energy Label 2012.

CCC safety certification is also required for motors with lower powers.

CCC – China Compulsory Certification – Order code **D01**

Motors with small powers (small power motors) that are exported to China must be certified up to a rated power of:

- 2-pole: ≤ 2.2 kW
- 4-pole: ≤ 1.1 kW
- 6-pole: ≤ 0.75 kW
- 8-pole: ≤ 0.55 kW

Notes:

Chinese customs checks the need for certification of imported products by means of the commodity code.

The following do not need to be certified:

- Explosion-proof motors
- Multi-voltage motors
- Multi-speed motors with powers higher than those listed above
- Repair parts

Introduction

General information

Versions in accordance with standards and specifications

Overview (continued)

VIK version

VIK = Verband der Industriellen Energie- und Kraftwirtschaft e.V.
(German Association of the Energy and Power Supply Industry)

- **VIK standard version** – 1LE1 + order code **C02**
"VIK" identification on rating plate.
→ Product range in catalog section 2.
- **VIK-Ex ec version** – 1MB1.3 + order code **C02**
"VIK" and "Ex ec IIC T3 Gc" marking on the rating plate
according to Directive 94/9/EC (ATEX).
→ Product range in catalog section 5.

Both versions include technology for Zone 2 to type of protection Ex ec IIC T3 Gc. Motors up to frame size 355 can be supplied in accordance with the technical requirements of the VIK recommendation.

Minimum efficiency class:

- VIK standard version:
IE3 in accordance with legal specifications.
- VIK Ex ec version:
At least IE3 in accordance with the final draft of the VIK recommendation dated February 2017.

Notes:

- 8-pole motors or all motors < 0.75 kW are still possible as these motors are outside the power range specified for IE stamping.
- Motors in VIK version with mounted technology (brake, rotary pulse encoder and separately driven fan) are not compatible with Zone 2.
Versions for Zone 21/22 are not possible.

TR CU product safety certificate EAC for the Eurasian customs union (Russia, Belarus, Kazakhstan)

TR CU = Technical Regulation Customs Union
EAC = Eurasian Conformity

The TR CU product safety certificate is required in order to import motors into the Eurasian customs union area.

"TR CU product safety certificate EAC for Eurasian customs union" – order code **D47**

When motors are ordered with order code **D47**, the motor rating plate and packaging are marked with the logo "EAC".

The motor must have a "TR CU product safety certificate EAC", although the certificate does not generally have to be shipped with the motor. The customs authorities use the motor article number to check the motor certification.

The following are available in the SIOS (Siemens Industry Online Support) and the Drive Technology Configurator:

- TR CU product safety certificate in accordance with the Low-Voltage Directive
- Additional TR CU product certificate in accordance with the EMC Directive.

Train-compatible version

Train-compatible version IC418, EN IEC 60349, acc. to EN 45545, without external fan and without fan cover (1LE10 aluminum motors in frame sizes 80 to 200)

- Electrical design in accordance with EN IEC 60349;
 $U_{rated} \leq 500$ V AC.
- DC-link voltage: $U_{dc} \leq 700$ V; $du/dt \leq 5$ kV/μs
- Vibration resistance to Class 3M4 according to IEC 60721-3-3
- Metal cable gland
- Including external grounding depending on construction type (corresponds to order code **H04**).
- Standard paint finish certified according to EN 45545 (polyurethane-based paint without test certificate – corresponds to order code **S06**)

Train-compatible version IC411, EN IEC 60349, with EN 45545, with external fan and fan cover in metal – order code **L91** for cooling method IC411

- 1LE10 aluminum motors in frame sizes 80 to 200
- Electrical design in accordance with EN IEC 60349;
 $U_{rated} \leq 500$ V AC
- DC-link voltage: $U_{dc} \leq 700$ V; $du/dt \leq 5$ kV/μs
- Vibration resistance to Class 3M4 according to IEC 60721-3-3
- Metal cable gland
- Including external grounding depending on construction type (corresponds to order code **H04**)
- Standard paint finish certified according to EN 45545 (polyurethane-based paint without test certificate – corresponds to order code **S06**)
- Incl. metal fan cover

Train-compatible version IC411, EN IEC 60349, without EN 45545, with external fan and fan cover in plastic – Order code **L90** for cooling method IC411

- 1LE10 aluminum motors in frame sizes 80 to 200
- Electrical design in accordance with EN IEC 60349;
 $U_{rated} \leq 500$ V AC
- DC-link voltage: $U_{dc} \leq 700$ V; $du/dt \leq 5$ kV/μs
- Vibration resistance to Class 3M4 according to IEC 60721-3-3
- Metal cable gland
- Including external grounding depending on construction type (corresponds to order code **H04**)
- Standard paint finish, without EN 45545 (polyurethane-based paint without test certificate – corresponds to order code **S06**)
- Incl. plastic fan cover

Recommended supplementary options:

- Located bearing DE (order code **L20**)
- Temperature class 155 (F), utilized according to 130 (B), coolant temperature 55 °C, derating approx. 13 % (order code **N07**)
- Coolant temperature –30 to +40 °C (order code **D04**)
- Coolant temperature –40 to +40 °C (order code **D03**)

Overview

Voltages, currents and frequencies

Standard voltages

EN 60034-1 differentiates between Category A (combination of voltage deviation $\pm 5\%$ and frequency deviation $\pm 2\%$) and Category B (combination of voltage deviation $\pm 10\%$ and frequency deviation $+3/-5\%$) for voltage and frequency fluctuations. The motors can supply their rated torque in both Category A and Category B. In Category A, the temperature rise is approx. 10 K higher than during rated operation.

Standard	Category	Category
IEC 60034-1	A	B
Voltage deviation	$\pm 5\%$	$\pm 10\%$
Frequency deviation	$\pm 2\%$	$+3\%/-5\%$
Rating plate data stamped with rated voltage a (e.g. 230 V)	a $\pm 5\%$ (e.g. 230 V $\pm 5\%$)	a $\pm 10\%$ (e.g. 230 $\pm 10\%$)
Rating plate data stamped with rated voltage ranges b to c (e.g. 220 to 240 V)	b -5% to c $+5\%$ (e.g. 220 -5% to 240 $+5\%$)	b -10% to c $+10\%$ (e.g. 220 -10% to 240 $+10\%$)

For further details, see EN 60034-1.

In Category B, the standard does not recommend extended operation, so it is not permissible for explosion-proof motors. See "Rating plates and additional rating plates" for details of the rating plate inscriptions and corresponding examples. The selection and ordering data give the rated current at 460 V, 60 Hz. The IEC 60038 standard specifies a tolerance of $\pm 10\%$ for line voltages of 230 V, 400 V, and 690 V.

Line voltages	Voltage code
1LE1 motors	
230 V Δ /400 VY, 50 Hz	22
460 VY, 60 Hz	
400 V Δ /690 VY, 50 Hz	34
460 V Δ , 60 Hz	
500 VY, 50 Hz	27
575 VY, 60 Hz	
500 V Δ , 50 Hz	40
575 V Δ , 60 Hz	

Y-axis: Voltage tolerance
X-axis: Frequency tolerance

Non-standard voltages and/or frequencies

The tolerance laid down by EN 60034-1 applies to all non-standard voltages.

For some non-standard voltages at 50 or 60 Hz, order codes are specified. They are ordered by specifying the code digit **9** for voltage in the 12th position of the Article No. as well as the code digit **0** in the 13th position of the Article No. and the corresponding order code.

M1Y Non-standard rated voltage between 200 V and 690 V (voltages outside this range are available on request), frequency, circuit, for 60 Hz additionally required rated power in kW.

Motor series	Frame size	Rated voltages that can be supplied for M1Y	
		Lowest/highest voltage for	
		Delta	Star
1LE1, 1MB1	63 ... 315	200/690 V	250/690 V

Order codes for other rated voltages are listed under "Order suffixes" in the "Selection and ordering data" as well as "Special versions" under "Voltages".

Line voltages according to NEMA

Assignment of rated voltage of the motor to that of the line

Line voltage	Motor voltage
208 V	200 V
240 V	230 V
480 V	460 V
600 V	575 V

Powers

The powers or rated powers are listed in the selection tables for both 50 Hz and 60 Hz. For 60 Hz, the rated power values must, in some cases, be increased, e.g. for pole-changing motors.

Assignment of standard powers kW-hp and vice versa, in accordance with IEC

$$\text{kW} \cdot 1.341 = \text{hp}$$

$$\text{hp} \cdot 0.746 = \text{kW}$$

P_{rated} kW	P_{rated} hp	P_{rated} kW	P_{rated} hp	P_{rated} kW	P_{rated} hp	P_{rated} kW	P_{rated} hp	P_{rated} kW	P_{rated} hp	P_{rated} kW	P_{rated} hp

Introduction

Electrical design

Rating plate and additional rating plates

Overview

In accordance with EN 60034-1, the approximate total weight is specified on the rating plate for all motors.

Supplementary data (maximum of 20 characters) can be indicated on the rating plate or additional rating plate and on the packaging label, order code **Y84**.

An adhesive label can also be supplied loose, order code **Y85**.

An additional rating plate for customer specifications is also possible, additional text: 9 lines of 40 characters each, order code **Y82**.

An additional rating plate with deviating rating plate data can also be ordered (only for ratings such as voltage, power, speed), order code **Y80**.

An "additional rating plate for voltage tolerance" can also be ordered.

Can be ordered for 230 VΔ/400 VY or 400 VΔ/690 VY (voltage code "22" or "34"). Not possible for pole-changing motors, naturally cooled 1PC1 motors, 8-pole motors and in combination with order code D34.

Order code **B07**

(voltage range plate is always provided in the form of an adhesive label)

The number of rating plates and/or the material quality of the rating plate including additional rating plates can be ordered using order codes Y82, Y84 and Y80. Does not apply to order code B07, rotational direction arrows, PTC thermistor plates, other notices.

- Additional (rating) plate(s)
Order code **M10**.
- Plate(s) with resistance to scratches, heat, cold and acid
Order code **M11**.

In the standard version, the rating plate is available in international format or in the German/English language. The language for the rating plate can be ordered by specifying in plain text. An overview of the languages that can be ordered is provided by the table below.

Overview of languages on the rating plate

Motor type	Frame size	Rating plate German (de)	English (en)
1LE10	63 ... 200	□	○
1LE15/6	71 ... 315	□	○
1LE5	315 ... 355	□	○
1MB1	80 ... 315	□	○
1PC1	100 ... 315	□	○

- Standard version
- Without additional charge

Explanation of the standard rating plate

Efficiency, power factor, rated speed, direction of rotation, rated torque

Overview

Efficiency and power factor

The efficiency η for 4/4, 3/4 and 1/2 load and the power factor $\cos \varphi$ for each rated power are listed in the selection tables in the individual sections of this catalog.
See page 1/5 for minimum efficiencies.

Rated speed and direction of rotation

The rated speeds are applicable for the rated data. The synchronous speed changes proportionally with the line frequency. The motors are suitable for clockwise and counterclockwise rotation.

When U1, V1, W1 are connected to L1, L2, L3 the motor rotates clockwise when viewing the drive shaft extension. Counterclockwise rotation is achieved by swapping two phases (see also "Heating and ventilation" on page 1/36).

Rated torque

The rated torque in Nm delivered at the motor shaft is

$$T = \frac{9.55 \cdot P \cdot 1000}{n}$$

P Rated power in kW
 n Speed in rpm

Note:

If the voltage deviates from its rated value within the admissible limits, the locked-rotor torque, the pull-up torque and the break-down torque vary with the approximate square of the value, but the locked-rotor current varies approximately linearly.

In the case of squirrel-cage motors, the locked-rotor torque and breakdown torque are listed in the selection tables as multiples of the rated torque.

Preferred practice is to start squirrel-cage motors directly on line. The torque class indicates that with direct-on-line starting, even if there is an undervoltage of -5 %, it is possible to start up the motor against a load torque of

- 160 % for CL 16
- 130 % for CL 13
- 100 % for CL 10
- 70 % for CL 7
- 50 % for CL 5

of the rated torque.

Introduction

Electrical design

Converter operation

Overview

All motors in the SIMOTICS generation are equipped with innovative insulation systems, consisting of high-quality enamel wires and insulating sheet materials in conjunction with highly temperature-resistant impregnations.

The motors can be operated with SINAMICS G and SINAMICS S converters (controlled and uncontrolled infeed) while adhering to the admissible voltage peaks in accordance with the adjacent table.

Continuous operation while fully utilizing the admissible voltage tolerances must be avoided and is not recommended in accordance with IEC 60034-1 2011 Chapter 7.3.

The preferred supply system configurations are TT systems and TN systems with neutral-point grounding. We do not recommend operation in TN systems because of the higher voltage load.

Operation on non-grounded IT systems is also possible. However, in a ground fault, the insulation is excessively stressed. In the case of a ground fault, the process should be terminated as quickly as possible ($t < 2$ h), and the fault resolved.

For motors with protruding connection cables (order codes **R20**, **R21**, **R22**, **R23**, and **R24**), please inquire in the case of converter operation.

Impulse Voltage Insulation Class (IVIC) – category C (strong)

The insulation system of SIMOTICS motors significantly exceeds the requirements of stress category C (IVIC C = high stress). If voltage peaks higher than those specified according to IVIC C can occur, observe the data in the following table.

- For a line voltage (converter input voltage) up to max. 500 V and operation connected to a SINAMICS G/SINAMICS S converter with uncontrolled infeed (BLM, SLM), the relevant guidelines for the motor and converter configuration must be observed.
- For a line voltage (converter input voltage) up to max. 480 V and operation connected to a SINAMICS S converter with controlled infeed (ALM), the relevant guidelines for the motor and converter configuration must be observed.
- For line voltages (converter input voltages) higher than those stated above (max. 690 V), motors that are ordered for converter operation must have a suitable insulation system.
- For operation of a converter of another manufacturer, the permissible voltage peaks according to IEC 60034-18-41 in accordance with stress category C (see table below) must be observed, depending on the particular line voltage (converter input voltage) and the motor insulation system.

		Line voltage U_{rated}					
		400 V		480 V		500 V	
Standard		IVIC C	Siemens	IVIC C	Siemens	IVIC C	Siemens
U_{phase}	$V_{pk/pk}$	1680	2200	2016	2200	2100	2200
$U_{phase-to-ground}$	V_{pk}	840	1100	1008	1100	1050	1100
$U_{phase-to-phase}$	$V_{pk/pk}$	2360	3000	2832	3000	2950	3000
$U_{phase-to-phase}$	V_{pk}	1180	1500	1416	1500	1475	1500

The following applies for the voltage rise time: $T_a > 0.3$ μ s.

The voltages according to EN 60034-18-41/IVIC CC are specified as peak-to-peak values ($V_{pk/pk}$). For information, the conventional peak values (V_{pk}) are also stated.

Insulation systems for converter operation > 480 V/500 V

The SIMOTICS motors can be operated in their standard version on SINAMICS converters without an additional filter up to a maximum converter input voltage of 500 V 3 AC on uncontrolled infeeds (SINAMICS G/S/V, BLM/SLM) and up to 480 V 3 AC on controlled infeeds (SINAMICS S, ALM). The specific configuration guidelines for motors and converters must be observed.

For higher converter input voltages, > 480 V/500 V 3 AC, a special insulation system of the motor (PREMIUM) is required. This is available for converter motors, such as SIMOTICS GP/SD VSD10, SIMOTICS DP crane motors, SIMOTICS FD, and the converter-capable SIMOTICS SD Pro motors.

For IE3 standard motors as of frame size 225, the PREMIUM insulation system can be obtained on request.

Bearing insulation/shaft grounding brushes

To avoid damage to bearings due to bearing currents, we recommend bearing insulation at the non-drive end (NDE) for frame size 225 and larger (order code **L51**).

For frame size 315 and larger, bearing insulation at the non-drive end (NDE) is always provided (order code **L51**).

When rotary encoders are used, it must be ensured that these do not bypass the bearing insulation. The rotary encoders in this catalog meet this requirement except for type 1XP8.

In most cases, NDE bearing insulation provides sufficient protection against damage to bearings due to bearing currents.

In rare cases, depending on the application and system, it may be necessary to take further measures on the converter or motor. On the motor side, bearing insulation is provided on the drive end (DE) (order code **L50** on frame size 225 and larger) and shaft grounding brushes (order code **L52** as of frame size 280).

When NDE bearing insulation is used together with DE bearing insulation, the option "shaft grounding brush" must additionally be selected to keep the shaft at a defined potential. In this constellation, to avoid damage to the bearings of the driven machine due to bearing currents, it is also necessary to insulate the coupling between the motor and the driven machine.

The EMC guidelines must always be complied with when the drive system is installed.

Thermal utilization of the motor

When motors are operated on a converter, additional losses occur due to the harmonics in the motor currents, which, depending on the permissible winding temperature, can make it necessary to reduce the torque. For operation on SINAMICS converters, the permissible torque values can be obtained from the SIZER engineering tool.

For operation on SINAMICS converters with the power ratings specified in the catalog, the motors are used according to temperature class 155 (F), i.e. in this case neither a service factor > 1 nor an increased coolant temperature is possible (order codes **N01**, **N02** and **N03** cannot be ordered).

Explosion-proof motors

For converter operation of Ex motors, special measures must be considered, see Chapter 5.

Overview***DURIGNIT IR 2000 insulation system***

The DURIGNIT IR 2000 insulation system consists of high-quality enamel wires and insulating sheet materials in conjunction with temperature-resistant resin impregnation. This ensures that these motors will have a high mechanical and electrical strength, high service value, and a long lifetime. The insulation system protects the winding to a large degree against aggressive gases, vapors, dust, oil and increased air humidity. It can withstand the usual vibration stressing. The insulation is suitable up to an absolute air humidity of 30 g water per m³ of air. Moisture condensation should be prevented from forming on the winding. For higher values, the **N30** and **N31** options are available – see page 1/34.

Please inquire about extreme applications.

Restarting against residual field and opposite phase

All motors can be restarted against 100 % residual field after a line voltage failure.

Winding and insulation version with regard to temperature class

All motors are designed for temperature class 155 (F). At rated power with line operation, the motors can be used in temperature class 130 (B).

Temperature class 155 (F), utilized according to 155 (F), with service factor (SF)

According to the selection table, at rated power and rated voltage, all 1LE1/1PC1 motors in line operation have a service factor of 1.15. An exception to this are IE1 motors, which have a service factor of 1.1.

Order code **N01**

Temperature class 155 (F), utilized according to 155 (F), for higher power

When utilized according to temperature class 155 (F), the rated power specified in the selection and ordering data can be increased by 15 %. Exception for IE1 motors – can be increased by 10 %.

Order code **N02**

Temperature class 155 (F), utilized acc. to 155 (F), with increased coolant temperature

With power as defined in the catalog and line operation, coolant temperature is permitted to rise to 55 °C.

Order code **N03**

The service factor (SF) is not indicated on the rating plate for order codes **N02** and **N03**. For converter operation at the power specified in the catalog, the motors are utilized according to temperature class 155 (F). Order codes **N01**, **N02**, and **N03** are not possible.

Temperature class 155 (F), utilized acc. to 130 (B), coolant temperature 45 °C, derating approx. 4 %

Motor series 1LE1 and 1MB1 can be ordered according to temperature class 155 (F) for utilization according to temperature class 130 (B) and a maximum coolant temperature of 45 °C with derating of 4 %.

Order code **N05**

Temperature class 155 (F), utilized acc. to 130 (B), coolant temperature 50 °C, derating approx. 8 %

Motor series 1LE1 and 1MB1 can be ordered according to temperature class 155 (F) for utilization according to temperature class 130 (B) and a maximum coolant temperature of 50 °C with derating of 8 %.

Order code **N06**

Temperature class 155 (F), utilized acc. to 130 (B), coolant temperature 55 °C, derating approx. 13 %

Motor series 1LE1 and 1MB1 can be ordered according to temperature class 155 (F) for utilization according to temperature class 130 (B) and a maximum coolant temperature of 55 °C with derating of 13 %.

Order code **N07**

Temperature class 155 (F), utilized acc. to 130 (B), coolant temperature 60 °C, derating approx. 18 %

Motor series 1LE1 and 1MB1 can be ordered according to temperature class 155 (F) for utilization according to temperature class 130 (B) and a maximum coolant temperature of 60 °C with derating of 18 %.

Order code **N08**

Temperature class 180 (H)

With motor series 1LE1, and 1PC1, utilization according to temperature class 180 (H) is permitted.

Order code **N10**

Temperature class 180 (H) at rated power and max. CT 60 °C

With motor series 1LE1, and 1PC1, utilization according to temperature class 180 (H) is permitted at rated power and a maximum coolant temperature of 60 °C.

Order code **N11** (not possible for 1LE15 and 1LE16 motors with increased power).

The grease lifetime specified is valid for a coolant temperature of 40 °C. If the coolant temperature is increased by 10 K, the grease lifetime and regreasing interval are halved.

Temperature class 155 (F), utilized acc. to 130 (B), with higher coolant temperature and/or installation altitude

The motors can be ordered according to temperature class 155 (F) for utilization according to temperature class 130 (B) with other customized requirements if they are specified in plain text in the order.

Order code **Y50**

Temperature class 155 (F), utilized according to 155 (F), other requirements

The motors can be ordered according to temperature class 155 (F) for utilization according to temperature class 155 (F) with other customized requirements if they are specified in plain text in the order.

Order code **Y52**

Temperature class 180 (H), utilized according to 155 (F)

The motors can be ordered according to temperature class 180 (H) for utilization according to temperature class 155 (F) with other customized requirements if they are specified in plain text in the order.

Order code **Y75**

Introduction

Electrical design

Windings and insulation

Overview (continued)

Increased air humidity/temperature with 30 to 60 g water per m³ of air

With motor series 1LE1, 1MB1 and 1PC1, motors are available in a version designed for increased air humidity in the range of 30 to 60 g water per m³ of air, depending on the temperature, as shown in the table below. This version has condensation drainage holes (sealed).

Order code **N30** (includes order code **H03**, **M11**, stainless bolts in the terminal box cover, and **S02** standard/special paint finish for Performance Line cast-iron motors).

You must contact us if order code **N30** is to be combined with mountings (e.g. rotary pulse encoders or brakes).

Increased air humidity/temperature with over 60 to 100 g water per m³ air

With motor series 1LE1, 1MB1 and 1PC1, motors are available in a version designed for increased air humidity of over 60 to 100 g water per m³ of air, depending on the temperature, as shown in the table below. This version has condensation drainage holes.

Order code **N31** (includes order code **H03**, **M11**, stainless bolts in the terminal box cover, and either the **S02** special paint finish or the **S03** "sea air resistant" special paint finish for Performance Line cast-iron motors).

Please inquire before combining order code **N31** with mountings (e.g. rotary pulse encoder, brakes)!

Absolute/relative conversion of air humidity

Relative humidity	Temperature							
	up to 20 °C	up to 30 °C	up to 40 °C	up to 50 °C	up to 60 °C	up to 70 °C	up to 80 °C	up to 90 °C
10 %	2	3	5	8	13	20	29	42
15 %	3	5	8	12	19	30	44	63

95 %	16	29	49	79	123	187	276	398
100 %	17	30	51	83	130	197	291	419

The values in the table with a blue background are covered by the standard version (up to < 30 g water per m³ of air).

The values in the table with a light gray background are covered by order code **N30** (30 to < 60 g of water per m³ of air).

The values in the table with a dark gray background are covered by order code **N31** (60 to < 100 g of water per m³ of air).

Please get in contact regarding requirements exceeding 100 g water per m³ of air.

Note:

- The coolant temperature and installation altitude can be found from page 1/35 onwards!
- The metal fan cover is available in combination with order code **F74** (not standard). Metal fan cover is always standard for cast-iron Performance Line motors (1LE16).
- In case of increased thermal stress, please combine with the order codes **N05** to **N08**.
- In conjunction with more stringent requirements for the paint finish or corrosion protection stress (offshore, sea air, etc.), the corresponding order codes **S02**, **S03**, **S04**, and potentially **H07**, must be combined.
- Order code **N31** requires additional specifications for the ambient temperature CT 50 °C to CT 90 °C.

Overview

The specified rated power is applicable for continuous duty in accordance with IEC 60034-1 at the frequency of 50 Hz, a coolant temperature (CT) or ambient temperature of 40 °C and an installation altitude (IA) up to 1000 m above sea level. 1LE1, 1MB1 and 1PC1 motors for ambient temperatures exceeding 40 °C are equipped with various types of seal. Mountings such as brake, terminal box at NDE, type of construction IM V1, type of construction IM V3 can sometimes exceed utilization in accordance with temperature class 130 (B).

For higher coolant temperatures and/or installation altitudes greater than 1000 m above sea level, the specified motor power must be reduced using the factor k_{HT} .

Depending on the frame size of the motor or the number of poles, special windings may be added to the motors for the different operating conditions.

This results in an admissible motor power of:

$$P_{adm} = P_{rated} \cdot k_{HT}$$

If the admissible motor power is no longer adequate for the drive, it should be checked whether the motor with the next higher rated power fulfills the requirements.

Abbreviation	Description	Unit
P_{adm}	Admissible motor power	kW
P_{rated}	Rated power	kW
k_{HT}	Factor for abnormal coolant temperature and/or installation altitude	

The motors are designed for temperature class 155 (F) and utilized in temperature class 130 (B). Under non-standard operating conditions, if they are to be used in this class, the admissible power rating must be determined from the table below.

Reduction factor k_{HT} for different installation altitudes and/or coolant temperatures

Installation altitude above sea level m	Coolant temperature < 30 °C	30 ... 40 °C	45 °C	50 °C	55 °C	60 °C
1000	1.07	1.00	0.96	0.92	0.87	0.82
1500	1.04	0.97	0.93	0.89	0.84	0.79
2000	1.00	0.94	0.90	0.86	0.82	0.77
2500	0.96	0.90	0.86	0.83	0.78	0.74
3000	0.92	0.86	0.82	0.79	0.75	0.70
3500	0.88	0.82	0.79	0.75	0.71	0.67
4000	0.82	0.77	0.74	0.71	0.67	0.63

Coolant temperature and installation altitude are rounded to 5 °C and 500 m respectively.

For details of derating for utilization in temperature class 155 (F), see "DURIGNIT IR 2000 insulation system".

Motors for coolant temperatures other than 40 °C or installation altitudes higher than 1000 m above sea level for utilization in temperature class 130 (B) must always be ordered with the additional identification code "-Z" and plain text. In the case of extreme derating, the operating data for the motors, i.e. efficiency and power factor, will also be less favorable due to partial utilization.

The following special versions are possible for 1LE1 and 1PC1 motors:

- Motors for coolant temperatures from –40 to +40 °C order code **D03**
- Motors for coolant temperatures from –30 to +40 °C order code **D04**

When ordering with order codes **D03** or **D04** in combination with mountings, the respective technical specifications have to be observed and it is necessary to inquire.

For details of order codes for use in temperature class 155 (F), see "DURIGNIT IR 2000 insulation system" under "Windings and insulation" on page 1/33.

Ambient temperature:

All motors can be used in the standard version at ambient temperatures between –20 and +40 °C. Exposure to direct sunlight can result in uncontrollable rises in motor temperature. To prevent this, appropriate shading measures such as a sun protective cover are recommended.

Motors can be utilized in temperature class 155 (F)

- at 40 °C with service factor 1.1, i.e. the motor can be continuously overloaded with 10 % of the rated power in the case of IE1 motors
- at 40 °C with service factor 1.15, i.e. the motor can be continuously overloaded with 15 % of the rated power in the case of IE2 motors and higher efficiency classes
- above 40 °C at rated power.

When motors are used in temperature class 130 (B) for higher ambient temperatures and/or installation altitudes, derating occurs in accordance with the Table "Reduction factor k_{HT} for different installation altitudes and/or coolant temperatures". For motors ex stock, the service factor is indicated on the rating plate.

For other temperatures, special measures are necessary. When brakes are to be mounted on motors intended for operation at temperatures below freezing, please inquire.

Introduction

Electrical design

Heating and ventilation

Overview

Anti-condensation heating

Supply voltage 230 V (1AC)
Order code **Q02**

Supply voltage 115 V (1AC)
Order code **Q03**

For motors with windings at risk of condensation due to the climatic conditions, e.g. inactive motors in humid atmospheres or motors that are subjected to widely fluctuating temperatures, anti-condensation heaters must be used.

An additional cable entry is provided for the connecting cable in the terminal box.

Motor series	Frame size	Cable entry
Aluminum motors (GP)	≤ 200	1 × M16 × 1.5
Cast-iron motors (SD)	≤ 180	1 × M16 × 1.5
	200	1 × M20 × 1.5
	225 ... 315	2 × M20 × 1.5
	355	2 × M20 × 1.5

Anti-condensation heating must not be switched on during operation.

Frame size	Heat power of the anti-condensation heating	
	Supply voltage at 230 V Order code Q02 W	115 V (110 V) Order code Q03 W
1LE1/1LE5/1PC1 motors		
63 ... 80	12.5	12.5
90 ... 112	25	25
132 ... 200	50	50
225 ... 250	92	92
280 ... 315	109	109
315 ... 355	218	218
1MB1 motors		
80 ... 112	7	7
132 ... 160	12	12
180 ... 200	57	57
225 ... 250	92	92
280 ... 315	109	109

Instead of an anti-condensation heater, another possibility is to connect a voltage that is approximately 4 to 10 % of the rated motor voltage to stator terminals U1 and V1; 20 to 30 % of rated motor current is sufficient to heat the motor.

Fans/separately driven fans

1LE1 and 1MB1 motors of frame size 71 to 315 have radial-flow fans in the standard version (with the exception of 1LE1, 1MB1 with option **F90** – version "Forced-air cooled motors without external fan and fan cover") that cool regardless of the direction of rotation of the motor (cooling method IC411 acc. to EN 60034-6). The air flow is forced from the non-drive-end (NDE) to the drive end (DE).

For details of separately driven fans for frame size 100 to 315, see also "Separately driven fans" on page 1/80.

Supply voltage of separately driven fan for 1LE1 motors:
The supply voltage tolerance of the separately driven fan is ±5 %. For voltage ranges, see page 1/80.

In confined spaces, it must be ensured that the minimum spacing is maintained between the fan cover and the wall. This also applies to adjacent parts, such as large handwheels and flywheels on the second shaft extension.

Clearance from wall/fan grilles

Frame size	mm
63, 71	15
80, 90, 100	20
112	25
132	30
160	40
180, 200	90
225, 250	100
280, 315	110
355	140

For version of the fan and the fan cover, see the table below.

Motor series	Frame size	Fan material	Fan cover material
1LE10	63 ... 71	Plastic	Metal
	80 ... 200	Plastic	Plastic ¹⁾
1LE15	71 ... 90	Plastic	Metal
	100 ... 315	Plastic	Plastic
1LE16	100 ... 315	Plastic	Metal
1LE55	315	Metal	Plastic
1LE56	315 ... 355	Metal	Metal
1MB1.3	71 ... 90	Metal	Metal
1MB1.3	100 ... 315	Plastic	Metal
1MB1.1, 1MB1.2	71 ... 315	Metal	Metal

Metal external fan impeller

The standard fan impeller made of plastic can be replaced with a fan impeller made of metal. This version is available for motor series 1LE1 (with the exception of 1LE1 with option **F90** – version "Forced-air cooled motors without external fan and fan cover"). A metal external fan is already included for the low-noise version. Up to frame size 160, the metal external fan impeller is manufactured from aluminum.

Order code **F76**

Fan cover for textile industry

For 1LE1 motors (with the exception of 1LE1 with option **F90** – version "Forced-air cooled motors without external fan and fan cover") the standard version of the fan cover cannot be used in the textile industry.

For the motor series 1LE1 (with the exception of 1LE1 with option **F90** – version "Forced-air cooled motors without external fan and fan cover") a special version of the fan cover is available for the textile industry. This has a protective cover and is made of non-corrosive sheet steel.

The motor length increases when the fan cover for the textile industry is mounted, see page 1/111 Fig. 12

Order code **F75**

Sheet metal fan cover

In place of the plastic fan cover, a sheet metal fan cover can be ordered for motor series 1LE1 (with the exception of 1LE1 with option **F90** – version "Forced-air cooled motors without external fan and fan cover").

Order code **F74**

The sheet metal fan cover is supplied as standard with 1LE16 motors (Performance Line).

¹⁾ For the frame size codes **A, D, F, H, J, K, L, N, T, U**, and **V**, a screwed-on cover (plastic or metal) is used in conjunction with the option **H03** (condensation drainage holes). Mounted separately driven fans or brakes are only available in sheet metal version.

Overview (continued)

Necessary minimum cooling air flow for forced-air cooled motors in standard duty

The cooling air flow specified in the selection table applies to continuous duty according to EN 60034-1 at a coolant temperature (CT) or ambient temperature of 40 °C respectively and an installation altitude (IA) up to 1000 m above sea level.

In the 1LE1/1LE5 motor version without external fan and fan cover, order code **F90**, the motor is located in the air flow of the

driven fan that must drive the minimum cooling air flow over the motor housing. The minimum air flow must pass closely over the housing (comparable to self-ventilation of the motor). Otherwise higher air flows are required to comply with admissible motor heating levels.

Introduction

Electrical design

Motor protection

Overview

The order variants for motor protection are coded with letters in the 15th position of the Article No. and, if necessary, using order codes.

In the standard version, the motor is designed without motor protection.

15th position of the Article No. letter **A**.

A distinction is made between current-dependent and motor-temperature-dependent protection devices.

The following applies to all motors:

The motors can withstand 1.5 times the rated current at rated voltage and frequency for two minutes (EN 60034).

Current dependent protection devices

Fuses are only used to protect power cables in the event of a short-circuit. They are not suitable for overload protection of the motor.

The motors are usually protected by thermally delayed overload protection devices (circuit breakers for motor protection or overload relays), for example with SIRIUS switching and protective devices. For further details, see Catalog IC 10.

This protection is current-dependent and is particularly effective in the case of a locked rotor.

For standard duty with short start-up times and starting currents not too excessive and for low numbers of switching operations, motor protection switches provide adequate protection. Motor protection switches are not suitable for heavy starting duty or large numbers of switching operations. Differences in the thermal time constants for the protection equipment and the motor result in unnecessary early tripping when the protection switch is set to rated current.

Motor-temperature-dependent protective devices and motor temperature detection with converter operation

Depending on the specific requirements, various different components can be built into the motor winding for switching off the motor before it overheats and for monitoring the winding temperature and motor temperature.

Temperature detectors – Bimetal switches

Bimetal switches operate on the principle of mechanical deformation as a result of long-term heating. Bimetal strips bent as a result of such heating have a spring action that results in sudden reversal of the curvature (concave to convex or vice-versa).

When a limit temperature is reached, these temperature detectors (NC contacts) can deactivate an auxiliary circuit. The circuit can only be reclosed following a considerable fall in temperature. Bimetal switches are suitable protection devices in the case of slowly rising motor temperatures. When the motor current rises quickly (e.g. with a locked rotor), these switches are not suitable due to their large thermal time constants.

Temperature detectors for tripping:

15th position of the Article No. letter **Z** and order code **Q3A**.

The temperature detectors have the following current-carrying capacity and switching capacity:

230 V, AC: 2.5 A

24 V, DC: 1.6 A

PTC thermistors – Thermistor motor protection

PTC thermistors provide the most comprehensive protection against thermal overloading of the motor. A rise in the winding temperature over the admissible value can be accurately detected thanks to the low heat capacity of these PTC (Positive Temperature Coefficient) thermistors and their excellent heat contact with the winding. When the limit temperature is reached (rated tripping temperature), the PTC thermistors undergo a sudden change in resistance. This is evaluated by tripping units and can be used to open auxiliary circuits. PTC thermistors can-

not themselves be subjected to high currents and voltages. This results in the destruction of the semiconductor. The switching hysteresis of the PTC thermistor and tripping unit is low, which supports fast restarting of the drive. Motor protection of this type is recommended for heavy duty starting, switching duty, extreme changes in load, high ambient temperatures or fluctuating supply systems.

Motor protection with PTC thermistor for tripping. In the terminal box, two auxiliary terminals are required.

15th position of the Article No. letter **B**.

Two temperature sensor circuits are used if a warning is required before the motor is shut down (tripped).

The warning is normally set to 10 K below the tripping temperature.

Motor protection with PTC thermistor for alarm and tripping.

In the terminal box, 4 auxiliary terminals are required.

15th position of the Article No. letter **C**.

Motor protection for frame sizes 80 and 90 is implemented with the 15th position of the Article No. letter **B**, and with the order code **Q11** with a PTC thermistor.

Motor protection for frame sizes 80 and 90 is implemented with the 15th position of the Article No. letter **C**, and with the order code **Q12** with two PTC thermistors.

In order to achieve full thermal protection, it is necessary to combine a thermally delayed overcurrent release and a PTC thermistor. For full motor protection implemented only with PTC thermistors, please inquire.

The SIRIUS 3RN2 thermistor motor protection device for protecting motors against overheating by means of direct temperature measurement, also for a hazardous area with ATEX approval, can be ordered separately. For further details, see Catalog IC 10 or www.siemens.com/product?3RN2.

PTC sensor characteristic

The PTC thermistor is a temperature-dependent component. At the smallest changes in temperature in the region of the rated shutdown temperature, the resistance of the PTC increases steeply.

PTC sensor characteristic

Overview (continued)NTC thermistor

NTC thermistors have a negative temperature coefficient and conduct current at higher temperatures better than at lower temperatures.

NTC thermistors are typically used for temperature compensation of electronic circuits, or to limit inrush currents, to achieve the soft starting of electrical machines, for example.

Motor temperature monitoring and shutdown using NTC thermistors is unusual, but it is technically possible. The tripping temperature can be set when using suitable tripping devices of this type.

NTC thermistors for tripping: 15th position of the Article No. letter **Z** and order code **Q2A**.

For line operation, the SIRIUS temperature monitoring relays 3RS1, 3RS2, components of the protective device, can be ordered separately.

For further details, see Catalog IC 10 or www.siemens.com/product?3RS1.

NTC thermistor characteristicKTY 84-130 temperature sensor

This temperature sensor is a semiconductor which, in a similar manner to a PTC thermistor, changes its resistance as a function of its temperature at a defined rate. Within the measuring range, however, the KTY 84-130 characteristic rises almost linearly. The temperature sensor is embedded in the winding overhang of the motor in the same way as the components mentioned above. It is characterized by its outstanding precision, high reliability, and temperature stability, as well as a fast response time. Thanks to these properties, which permit the almost analog monitoring of winding temperature, the KTY 84-130 is preferred for converter operation.

Motor temperature detection with embedded KTY 84-130 temperature sensor: In the terminal box, two auxiliary terminals are required.

15th position of the Article No. letter **F**.

Temperatures for alarm and tripping can be set as required when using converters from Siemens that determine the motor temperature in accordance with the measuring principle described above. With these devices, the measured signal is evaluated directly in the converter.

For line operation, the SIRIUS 3RS1, 3RS2 temperature monitoring device, which is part of the protection equipment, can be ordered separately.

For further details, see Catalog IC 10 or www.siemens.com/product?3RS1.

KTY 84-130 temperature sensor characteristic

Introduction

Electrical design

Motor protection

1

Overview (continued)

Pt100/Pt1000 resistance thermometer

The resistance thermometer has a chip for a temperature sensor, the resistance of which changes in relation to temperature according to a series of reproducible basic values. The changes in resistance are transferred as changes in current. At 0 °C, the measurement resistances are adjusted to 100 Ω for the Pt100 and 1000 Ω for the Pt1000, and correspond to the accuracy class B (i.e. the relationship between resistance and temperature). The limit deviation is ± 0.3 °C, and the admissible deviations are defined in EN 60751.

The Pt1000 resistance thermometer will, in the future, gradually replace the KTY84-130 temperature sensors available today. Similar to the method of operation of the Pt100, the relationship between the temperature and the electrical resistance of conductors is utilized in the Pt1000 to measure the temperature, just like with the additional resistance thermometers described above.

Pure metals undergo larger changes in resistance than alloys and have a relatively constant temperature coefficient.

The order options for the Pt100/Pt1000 temperature sensors are described in Chapter 2 (15th position of the Article No.: **H, J, K, L, P, Q, or R**, or order codes **Q35, Q36, Q60, Q61, Q62, Q63, Q64, Q72, Q78, or Q79**).

Temperatures for alarm and tripping can be set as required when using converters from Siemens that determine the motor temperature in accordance with the measuring principle described above. With these devices, the measured signal is evaluated directly in the converter.

In line operation, the SIRIUS 3RS1, 3RS2 temperature monitoring relay can be ordered separately for the protection equipment.

For further details, see [Catalog IC 10](#) or www.siemens.com/product?3RS1.

Pt100/Pt1000 resistance thermometer characteristics

AGMA

OverviewLocation of the terminal box

The terminal box of the motor can be mounted in four different locations or positions. For the motors of the 1LE10 aluminum series, frame sizes 63 and 71, the terminal box can only be mounted on the top (16th position of the Article No. **4**).

The position of the terminal box is coded using the 16th position of the motor Article No.

When defining the position of the terminal box, please observe the following:

- Motors with feet must always be viewed looking onto the drive end with the shaft in the horizontal position. The feet are then always at "6 o'clock". This is especially important with construction types IM B6, IM B7, and IM B8, and also applies to combined construction types such as IM B35.
- Flange-mounted motors (e.g. IM B5) whose drive-end flange has a condensation drainage hole must always be viewed looking onto the drive end with the shaft in the horizontal position. The condensation drainage hole is then always at "6 o'clock".

The aluminum series motors 1LE10 and 1PC10 with feet and standard power range have cast feet in the standard version in frame sizes up to 160, e.g. IM B3, IM B6, etc. (applies only to IE3 motors with standard housing; IE3 motors with long housing always have screwed-on feet). Motors from frame size 180 upwards have screwed-on feet. If rotation of the terminal box is to be possible in the future, the "Screwed-on feet" option, order code **H01**, must be ordered.

In accordance with the type of construction, spare holes that are not used for mounting the feet can be used by the customer. If the customer would like this option, it is advisable to include order code **H10** "Housing with screw mounting" in the order – possible only for frame sizes 80, 90, 180 and 200. Responsibility for any strength calculations required for this type of customer mounting lies with the customer.

For all motors with increased power and with feet, the feet are screw-mounted as standard. The terminal box can be rotated later. Motors with frame sizes 225 to 315 are supplied as standard with cast feet.

Terminal box on right-hand side:
16th position of the Article No. digit **5**

Terminal box on left-hand side:
16th position of the Article No. digit **6**

Terminal box below:
16th position of the Article No. digit **7**

Location of the terminal box with the corresponding digits in the 16th position of the Article No.

The number of winding ends depends on the winding design. Three-phase motors are connected to the three phase conductors L1, L2 and L3 of a three-phase system. The rated voltage of the motor in the running connection must match the phase conductor voltages of the network.

When the three phases are operating in a time sequence and are connected to the terminals of the motor in alphabetical order U1, V1 and W1, clockwise rotation of the motor shaft is established as viewed onto the drive end. The direction of rotation of the motor can be changed to counterclockwise if two connecting leads are interchanged.

Labeled terminals are provided to connect the protective conductor.

A PE terminal is provided in the terminal box for grounding. A grounding terminal is provided on the outside of the motor frame – special version for 1LE1/1PC1 motors.

Order code **H04**

External grounding terminal/external grounding is standard for 1LE15/16 motors from frame size 180 upwards.

A second external grounding connection can also be ordered. Order code **H70** (must be ordered in combination with option **H04**)

If a brake control system or thermal protection is installed, the connections will also be in the terminal box. The motors are suitable for direct connection to the line supply.

Design of the terminal box

The number of terminals and the size of the terminal box are designed for standard requirements.

For special requirements, or on customer request, a larger terminal box can be supplied.

For motors with frame sizes 71 up to 90, the following constraints apply:

When the terminal box is located on the left or right-hand sides, the customer must not align the cable entry towards the housing feet, because this can cause collisions between the motor connection cables and the foundations.

Larger terminal box

Order code **R50**

If the necessary installation angle of the motor would cause machine components to collide with the terminal box, the terminal box can be moved from the drive end (DE) to the non-drive end (NDE). Only use according to temperature class 155 (F). When the terminal box is rotated to the non-drive end (NDE) of the motor, it is important to note that dimensions "C" and "CA" will not comply with the values specified by EN 50347. Dimensional drawings can be requested via DT Configurator.

Order code **H08**

Introduction

Electrical design

Connection, circuit and terminal boxes

Overview (continued)

Motor connection

Line feeder cables

The line feeder cables must be dimensioned acc. to DIN VDE 0298. The number of required feeder cables, if necessary in parallel, is defined by:

- The max. cable cross-section which can be connected
- The cable type
- The cable routing
- The ambient temperature and the corresponding admissible current in accordance with DIN VDE 0298

For motors with auxiliary terminals (e.g. 15th position of the Article No. letter **B**), additional cable entry holes are provided (M16 × 1.5 or M20 × 1.5 depending on frame size). For further details, see the data sheet function in the DT Configurator.

The terminal box is located on the housing and bolted in place. The terminal box can be turned by 4 × 90° degrees on the terminal base of the machine housing in the case of a terminal board with 6 terminal studs (standard version).

Parallel feeders

Some motors must be fitted with parallel feeders due to the maximum permissible current per terminal. These motors are indicated in the selection and ordering data in the respective chapter.

The temperature rises in the terminal box must be taken into account when selecting the connection cable or individual connections.

These approximate temperature rises are as follows:

- Range of ambient temperature (T_{amb}) +50 K for motors with temperature class Th.Cl.155 (F).
- Range of ambient temperature (T_{amb}) +60 K for motors with temperature class Th.Cl.180 (H).
- Without any specifications in field 19 (T_{amb}) on the rating plate, T_{amb} is equal to 40 °C.

Cable entry on terminal box

With a view onto the drive end of the motor with the shaft in the horizontal position and the terminal box on the top, the cable entry is always on the right-hand side of the motor, as shown in the figure below. Standard position 0°, (smoke extraction motors, order code **R13**). The terminal box can be rotated on the base of the motor housing such that the cable entry is located in the positions given below:

- Towards the drive end (DE)
(rotation of terminal box by 90°, entry from DE) for B5 types of constructions only with order code **H08**!
With B14 construction types, the customer must ensure that sufficient space is available for cable outlet.
Order code **R10**
- Towards the fan end (NDE)
(rotation of terminal box by 90°, entry from NDE)
Order code **R11**
- Opposite the standard position 0°
(rotation of terminal box by 180°, entry opposite the standard position 0°)
Order code **R12**

The dimensions of the terminal box are listed in the section "Dimensions" on pages 2/122 to 2/153 in accordance with the frame size and the "Dimensional drawings". If the position of the terminal box (right-hand side, left-hand side, or top) is changed, the position of the cable entry must be checked and, if necessary, ordered with the corresponding order codes (**R10**, **R11**, and **R12**).

Location of the cable entries with the corresponding order codes

Motor	Frame size	Terminal box	Terminal box position			Retrofitting possible	Continuously by 360°	Rotation of the terminal box and cable entry			Retrofitting possible

Overview (continued)

Terminal box in standard position, detailed view

Ordering example:

Terminal box on right-hand side (16th position of the Article No. digit **5**):

Cable entry is from below unless another order code is specified.

Cable entry from drive end (DE) – Article No. with **-Z** and order code **R10**.

For cable entry to a standard terminal box, a metal cable gland can be ordered for motor connection.

One metal cable gland – Article No. with **-Z** and order code **R15**.

For special requirements for which standard holes for the cable entries are inadequate for the UK market, reduction pieces for M cable glands in accordance with British Standard that are mounted on both cable entries can be supplied (only up to frame size 160).

Order code **R30**

Frame size	Cable entry acc. to	
	IEC	British Standard
100	2 × M32	2 × M20
112/132	2 × M32	2 × M25
160	2 × M40	2 × M32

Motor connectors

Motors of frame sizes 80 to 132 can be supplied with a motor connector.

The motor connectors are mounted on the specially designed terminal box at the factory and are aligned towards NDE in the basic version. The terminal boxes can be rotated by $4 \times 90^\circ$ on the base of the motor housing (order codes **R10**, **R12**, and **R13**).

The following motor connector variants are available:

- Motor connector HAN10B-10E
Order code **R70**
- Motor connector HAN10B-10E EMC
Order code **R71**
- Motor connector HAN3A-Q12 EMC
Order code **R72**
- Motor connector HAN3A-Q12
Order code **R73**

Motor connector assignment

Motor Type	Frame size	Motor connectors Type	Size of the terminal box
1LE10	63 ... 70	HAN10B-10E HAN10B-10E EMC	TB1B60
	80 ... 90	HAN3A-Q12 HAN3A-Q12 EMC	TB1E00 with mounted brake TB1E10
	80 ... 90	HAN10B-10E HAN10B-10E EMC	Only possible with TB1E10
1LE10, 1PC10	100 ... 132	HAN10B-10E HAN10B-10E EMC	Currently only available with TB1F10 ¹⁾ (frame sizes 100 and 112) or TB1H10 (frame size 132)

Technical characteristic values of motor connectors according to EN 60664-1 and EN 61984

Characteristic value	Motor connector			
	HAN3A-Q12		HAN10B-10E	
Degree of pollution	3	2	3	2
Rated current	10 A		16 A	
Rated voltage	400 V	400/690 V	500 V	400/690 V
Rated voltage acc. to UL/CSA	600 V		600 V	

For further technical specifications of the motor connectors, refer to the catalog of Harting Deutschland GmbH & Co. at www.harting.com

or
<https://b2b.harting.com/ebusiness/de/industrie-steckverbinder-han/100382>.

Protruding cable ends

For confined spaces, protruding cable ends can be ordered without a terminal box with cover plate.

The following lengths of protruding cables can be ordered as standard using order codes:

- 3 cables protruding, 0.5 m long ¹⁾
Order code **R20**
- 3 cables protruding, 1.5 m long ¹⁾
Order code **R21**
- 6 cables protruding, 0.5 m long
Order code **R22**
- 6 cables protruding, 1.5 m long
Order code **R23**
- 6 cables protruding, 3.0 m long
Order code **R24**

The cross-section of the named cable refers to a coolant temperature of up to CT 40 °C.

¹⁾ For 3 protruding cables only, it must be specified in plain text whether star or delta connection is required (voltage code **90** and **M1Y**).

– not available

Terminal connection

The terminal board accommodates the terminals that are connected to the leads to the motor windings. The terminals are designed so that for frame sizes 71 to 315, the external (line) connections can be made without the need for cable lugs.

¹⁾ In addition to the exact part designation, please specify the machine type and the serial number in all orders for spare parts and repair parts.

²⁾ Designed for cable glands with O-ring.

³⁾ NPT threads can be ordered with order code **Y61**.

⁴⁾ For 1LE1021 and 1LE1023 terminal boxes TB1E10 normal version.

Degrees of protection

Overview

All motors are designed to degree of protection IP55. They can be installed in dusty or humid environments. The motors are suitable for operation in tropical climates. Guide value < 60% relative air humidity at CT 40 °C. Other requirements are available on request (see table on page 1/34).

Brief explanation of the degree of protection

IP54:

- Protection against harmful dust deposits
- Protected against spray water

IP55:

- Protection against harmful dust deposits
- Protection against water jets from any direction

IP56:

- Protection against harmful dust deposits
- Protection against powerful water jets from any direction

Order code H22

Important: Note that submersion by waves or total immersion, even temporarily, is not permitted especially in the case of motors with fans. This corresponds to IP67 or IP68 degree of protection (please inquire).

EN 60034-5 defines protection level 6 for water protection as: "Protection against water due to heavy seas or water in a powerful jet". IP56 degree of protection can only be used with the requirement "Protection against a powerful jet" and not for the requirement "Protection against heavy sea".

Not possible in combination with brake 2LM8 (order code **F01**).

IP65:

- Complete protection against dust deposits
- Protection against water jets from any direction

Order code H20

In EN 60034-5, the code 6 for protection against the ingress of foreign bodies and touch hazard protection for electrical machines is not listed – Data for code 6 (protection against the ingress of dust) is given in EN 60529.

Not possible in combination with HOG 9 DN 1024 I rotary pulse encoder (order code **G05**) and/or brake 2LM8 (order code **F01**) and/or paint finish, cast-iron parts primed (order code **S00**).

EN 60529 contains a comprehensive description of this degree of protection as well as test conditions.

With motors that have a vertical shaft extension, the end user must prevent an ingress of fluid along the shaft.

For motors with shaft extension pointing downwards, the version "Protective cover for types of construction" order code **H00** is urgently recommended, see also the explanations on "Types of construction" on page 1/51.

With flange-mounted motors, for IM V3 type of construction, collection of fluid in the flange basin can be prevented by drainage holes (on request).

The condensation drainage holes at the drive end (DE) and non-drive end (NDE) are sealed (IP55) on delivery. If the condensation drainage holes are ordered for motors of the IM B6, IM B7 or IM B8 type of construction (feet on side or top), the position of the drainage holes will be in the correct position for the type of construction.

Order code **H03**

Overview
Standard types of construction and special types of construction

Type of construction acc. to EN 60034-7		Frame size	Letter of the 14th position of the Article No.	Additional identification code -Z with order code
Without flange				
IM B3/IM 1001		63 to 355	A	–
IM B6/IM 1051		63 to 355	T	–
IM B7/IM 1061		63 to 355	U	–
IM B8/IM 1071		63 to 355	V	–
IM V5/IM1011 without protective cover		63 to 355	C ¹⁾	–
IM V6/IM 1031		63 to 355	D	–
IM V5/IM 1011 with protective cover		71 to 355	C	+ H00 ²⁾
With flange				
IM B5/IM 3001		63 to 355	F	–
IM V1/IM 3011 without protective cover		63 to 355	G ¹⁾	–
IM V1/IM 3011 with protective cover		71 to 355	G	+ H00 ²⁾
IM V3/IM 3031		63 to 355	H	–
IM B35/IM 2001		63 to 355	J	–

In the EN 50347 standard, flanges FF with through holes and flanges FT with tapped holes are specified.

¹⁾  The following applies for explosion-proof motors:
In the case of the types of construction with shaft extension pointing downwards, the version "with protective cover" is required. For types of construction with shaft extension pointing upwards, a suitable cover must be implemented to prevent small parts from falling into the fan cover (see the standard IEC/EN 60079-0). The cover must not block the cooling air flow.

²⁾ Standard cylindrical shaft extension (second shaft extension) **L05** is not possible.

Introduction

Mechanical version

Types of construction

Overview (continued)

Type of construction acc. to EN 60034-7		Frame size	Letter of the 14th position of the Article No.	Additional identification code -Z with order code
With flange				
IM B14/IM 3601		80 to 315	K	–
IM V19/IM 3631		80 to 315	L	–
IM V18/IM 3611 without protective cover		80 to 315	M ¹⁾	–
IM V 18/IM 3611 with protective cover		80 to 315	M	+ H00 ²⁾
IM B34/IM 2101		80 to 315	N	–
With special flange				
IM B14/IM 3601		80 to 315	K	+ P01
IM B34/IM 2101		80 to 315	N	+ P01
IM V18/IM 3611 without protective cover		80 to 315	M ¹⁾	+ P01
IM V 18/IM 3611 with protective cover		80 to 315	M	+ P01 + H00 ²⁾
IM V19/IM 3631		80 to 315	L	+ P01

In EN 50347, flanges are assigned to the frame sizes as FT with tapped holes. See the table on the next page for flange dimensions.

The dimensions of the following types of construction are identical:
IM B3, IM B6, IM B7, IM B8, IM V5 and IM V6
IM B5, IM V1 and IM V3
IM B14, IM V18 and IM V19

Motors in the standard power range can be ordered in basic types of construction IM B3, IM B5 or IM B14 and operated in mounting positions IM B6, IM B7, IM B8, IM V5, IM V6, IM V1, IM V3 (up to frame size 160 L) or IM V18 and IM V19. Lifting eyes are available for transport and installation in a horizontal position. In conjunction with the lifting eyes, for the purpose of stabilizing the position when the motor is arranged vertically, additional lifting straps (EN 1492-1) and/or clamping bands (EN 12195-2) must be used.

When a motor for mounting position IM V1 is ordered directly, the motor is supplied with lifting eyes for vertical mounting (up to frame size 90 and frame sizes 180 and 200 for aluminum motors without eyebolts).

The motors are designated in accordance with the types of construction on the rating plate.

With motors that have a vertical shaft extension, the end user must prevent an ingress of fluid along the shaft. In the case of all types of construction with shaft extension pointing downwards, the version "with protective cover" is urgently recommended, see section "Degrees of protection" on page 1/50 – housing version.

Motors with feet, in some cases, have two fixing holes at the non-drive end (NDE), see dimension tables on pages 2/122 to 2/153.

A screw-mounted cover (made of sheet metal or plastic depending on shaft height) is included as standard for horizontal types of construction and types of construction with shaft pointing upwards (14th position of the Article No. letter **A, T, U, V, D, F, H, J, K, L, N**) on motors up to FS 160 in combination with condensation drainage holes, order code **H03**.

¹⁾  The following applies for explosion-proof motors:
In the case of the types of construction with shaft extension pointing downwards, the version "with protective cover" is required. For types of construction with shaft extension pointing upwards, a suitable cover must be implemented to prevent small parts from falling into the fan cover (see the standard IEC/EN 60079-0). The cover must not block the cooling air flow.

²⁾ Standard cylindrical shaft extension (second shaft extension) **L05** is not possible.

Overview

In EN 50347, the frame sizes are allocated flange FF with through holes and flange FT with tapped holes. The designation of flange A and C according to DIN 42948 (invalid since September 2003) are also listed for information purposes. See the table below.
(**Z** = the number of retaining holes)

Frame size	Type of construction	Flange type	Flange with through holes (FF/A) Flange with tapped holes (FT/C)		Dimension designation acc. to IEC

¹⁾ With reference to standard EN 50347, flanges that are 2 steps larger are used with option **P01** in the frame sizes 71 and 80.

Introduction

Mechanical version

Shaft and rotor

Overview

Shaft extension

60° center hole acc. to DIN 332, Part 2 with M3 to M24 tapped hole depending on the shaft diameter (see dimension tables in section 2 of the catalog).

DE (shaft extension)	
Diameter mm	Thread mm
7 ... 10	DR M3
> 10 ... 13	DR M4
> 13 ... 16	DR M5
> 16 ... 21	DR M6
> 21 ... 24	DR M8
> 24 ... 30	DR M10
> 30 ... 38	DR M12
> 38 ... 50	DR M16/DS M16
> 50 ... 85	DS M20
> 85 ... 130	DS M24

Shaft extension with standard dimensions, without feather keyway

For motor series 1LE1, 1MB1 and 1PC1, the standard shaft extension can be ordered with standard dimensions without a feather keyway. The key convention does not have to be stamped onto the rating plate for balancing.

Order code **L04**

Standard shaft made of stainless steel

A standard shaft made of stainless steel can be ordered (e.g. 1.4021) for the 1LE1, 1MB1 and 1PC1 motor series. This is only possible for shaft extensions of standard dimensions. Order code **L06**

Special non-rusting materials are only available on request.

Non-standard cylindrical shaft extension

The non-standard cylindrical shaft extension can be used on the drive end (DE) (with plain text according to table). The feather keys are supplied in every case.

Order code **Y58**

For order code **Y58** non-standard cylindrical shaft extension (DE):

- Dimension D: less than or equal to the inner diameter of the roller bearing, tolerance band less than tolerance band acc. to EN 50347.
- Dimension E: less than or equal to 2 × length E (standard) of the shaft extension.

See the table below "Admissible changes to the shaft extension DE" and the dimension tables in the relevant sections of the catalog.

Admissible changes to the shaft extension DE (Y58)

Motor series	Frame size	No. of poles	Shaft extension length E in mm		Shaft extension diameter D in mm		
			Standard	up to max.	mini-mum	Standard	up to max. 1)
1LE1	63	2 ... 6	23	46	11	11	12
1LE1, 1MB1	71	2 ... 8	30	60	14	14	15
	80	2 ... 8	40	80	19	19	20
	90		50	100	24	24	25
1LE1, 1MB1, 1PC1	100	2 ... 8	60	120	24	28	30
	112						
	132	2 ... 8	80	160	28	38	40
	160	2 ... 8	110	220	38	42	45
1LE15, 1LE16, 1MB1	180	2 ... 8	110	220		48	48
	200	2 ... 8	110	220		55	55
	225	2 ... 8	110	220		55	60
		4 ... 8	140	280		60	60
	250	2 ... 8	140	280		60	70
		4 ... 8	140	280		65	70
	280	2 ... 8	140	280		65	70
		4 ... 8	140	280		75	80
	315	2 ... 8	140	280		65	75
		4 ... 8	140	280		80	90
1LE5	315	2 ... 8	140	280		65	75
		4 ... 8	170	280		85	90
	355	2 ... 8	140	280		75	85
		4 ... 8	170	340		95	95

Standard, cylindrical shaft extension NDE acc. to EN 50347 (second shaft extension)

Order code **L05** (on request)

For a coupling output, the standard, cylindrical shaft extension can transmit the full rated power.

Please also inquire about the transmitted power and admissible cantilever force if belt pulleys, chains or gear pinions are used on the standard, cylindrical shaft extension.

A standard, cylindrical shaft extension (second shaft extension) NDE is not available if a rotary pulse encoder and/or a separately driven fan has been mounted onto the motor. Please inquire for mounted brakes.

Dimensions and tolerances for keyways and keys are designed to EN 50347. The motors are always supplied with a key inserted in the shaft.

If the second shaft extension has non-standard dimensions, this must be ordered with order code **L05** in combination with order code **Y59** non-standard shaft dimensions NDE.

For the order code **L05**, this is with order code **Y59** (with plain text specifications according to the table).

- Dimension D: less than or equal to fan hub inner diameter, for frame size 160 tolerance band is less than tolerance band to EN 50347
- Dimension E: less than or equal to 2 × length E (standard) of the shaft extension

See the table below "Admissible changes to the shaft extension NDE" and the dimension tables in the relevant sections of the catalog.

Admissible changes to the shaft extension NDE (Y59)

Motor series	Frame size	No. of poles	Shaft extension length E in mm		Shaft extension diameter D in mm		
			Standard	up to max.	mini-mum	Standard	up to max. 1)
1LE1	63	2 ... 6	23	46	11	11	12
1LE1, 1MB1	71	2 ... 8	30	60		14	15
1LE1, 1MB1	80/90	2 ... 8	40	80		19	20
1LE1, 1MB1, 1PC1	100	2 ... 8	50	100		24	25
	112						
	132	2 ... 8	60	120		28	35
	160	2 ... 8	110	220		42	45
1LE15, 1LE16, 1MB1	180	2 ... 8	110	220		48	48
	200	2 ... 8	110	220		55	55
	225	2 ... 8	110	220		48	55
		4 ... 8	110	220		55	55
	250	2 ... 8	110	220		55	70
		4 ... 8	140	280		60	70
	280	2 ... 8	140	280		60	70
		4 ... 8	140	280		65	70
	315	2 ... 8	140	280		60	75
		4 ... 8	140	280		70	75
1LE5	315	2 ... 8	140	280		60	75
		4 ... 8	140	280		70	75
	355	2 ... 8	140	280		60	75
		4 ... 8	170	280		80	90

Non-standard, cylindrical shaft extensions up to the specified lengths and diameters can be supplied for the motor series listed in the tables "Admissible changes to the shaft extension DE (Y58)" and "Admissible changes to the shaft extension NDE (Y59)". All other dimensions are available on request.

It is the responsibility of the customer to ensure that the admissible cantilever forces are reduced in accordance with the non-standard shaft extension.

1) At maximum admissible diameter, a step increase in shaft diameter is not possible.

Overview (continued)**Concentricity of shaft extension, coaxiality, and linear movement in accordance with IEC 60072-1 Tolerance R for flange-mounted motors**

The following are specified in DIN 42955 with Tolerance N (normal) and Tolerance R (reduced):

1. Concentricity tolerances for the shaft extension
2. Coaxiality tolerances for the shaft extension and flange centering
3. Linear movement tolerances for the shaft extension and flange surface

The concentricity of the shaft extension, coaxiality and linear movement according to IEC 60072-1 Tolerance R for flange-mounted motors can be ordered using order code **L08**. This order code can be combined for motors with deep-groove bearings of series 60..., 62... and 63... This is not possible in combination with a mounted brake or encoder.

Concentricity of the shaft extension can be ordered according to IEC 60072-1 Tolerance R for types of construction without flange with order code **L07**.

Concentricity tolerance for the shaft extension

Diameter of the cylindrical shaft extension d mm	Concentricity tolerance	
	N (normal) mm	R (reduced) mm
≤ 10	0.03	0.015
> 10 ... 18	0.035	0.018

Overview

The flange-mounted motors can be equipped with a radial sealing ring in order to mount gearing.
Order code **H23**

It must be ensured that the sealing ring is lubricated using grease, oil mist, or oil spray. (It is not admissible to use pressurized oil > 0.1 bar.) We recommend that the admissible bearing loads are carefully checked.

Introduction

Mechanical version

Balance and vibration severity

Overview

All rotors are dynamically balanced with an inserted half key. This corresponds to vibration severity grade A (normal or standard). EN 60034-14 Sept. 2004 regulates the vibrational behavior of machinery. Based on ISO 8821, the key convention "half key (H)" must be used for balancing.

Note:

If there is a keyway, a full feather key is always inserted on delivery.

The type of key convention is stamped on the face of the shaft extension at the customer side DE/NDE:

F = Balancing with full key
(full-key convention)

H = Balancing with half key
(half-key convention) – standard

N = Balancing without key –
Plain text required (convention without key)

For motors up to frame size 112 the code is stamped on the rating plate.

Full-key balancing or balancing with full feather key (F) is possible by specifying order code **L02** (additional charge).

Balancing without feather key (N) is possible by specifying order code **L01** (additional charge).

Vibration severity grade A is the standard version and is valid up to a rated frequency of 60 Hz. If 2-pole motors of frame sizes 280

and 315 are to be rigidly installed, cast feet are necessary in order to comply with the vibration requirements of IEC 60034-14. IE4 2-pole motors in frame size 315 and pole-changing motors (4-pole/2-pole) fulfill the vibration requirements specified in IEC 60034-14 only when the motor is elastically suspended.

The low-vibration version B can be supplied to fulfill stricter requirements on smooth running (additional charge).

Vibration severity grade B

Not possible with parallel roller bearings.

Order code **L00**

The order code **L00** vibration severity grade B is not possible in combination with order codes **G40**, **G41**, **G42**. 2-pole trans-standard aluminum motors in frame sizes 180 and 200 (14th position of the Article No. is A, C, D, J, T, U, V) and order code **L00** have cast-iron feet.

This vibration is assessed in accordance with vibration severity grade A or B according to EN 60034-14 (see table).

The limits stated in the table apply to uncoupled, freely suspended, idling motors.

For converter operation with frequencies higher than 60 Hz, special balancing is required for compliance with the specified limit values (plain text: maximum supply frequency/speed).

For further details, see the online help in the DT Configurator.

Limits (rms values) for max. vibration severity in terms of vibration displacement (s), vibration velocity (v), and acceleration (a) for the shaft height H

Vibration severity grade	Machine installation	Shaft height H in mm 56 ≤ H ≤ 132			132 < H ≤ 280			H > 280		
		s_{rms} μm	v_{rms} mm/s	a_{rms} m/s ²	s_{rms} μm	v_{rms} mm/s	a_{rms} m/s ²	s_{rms} μm	v_{rms} mm/s	a_{rms} m/s ²
A	Free suspension	25	1.6	2.5	35	2.2	3.5	45	2.8	4.4
	Rigid clamping	21	1.3	2.0	29	1.8	2.8	37	2.3	3.6
B	Free suspension	11	0.7	1.1	18	1.1	1.7	29	1.8	2.8
	Rigid clamping	–	–	–	14	0.9	1.4	24	1.5	2.4

For details, see standard EN 60034-14 Sept. 2004.

If the type tests for machines with shaft height H > 280 mm demonstrate a determining component with twice the line frequency, the limit for maximum vibration severity in Table 1 (grade A) can be increased from 2.3 mm/s (rms value) to 2.8 mm/s (rms value). Higher values must be agreed beforehand. A component with twice the line frequency is regarded as dominant if the type test shows that it is greater than 2.3 mm/s (rms value).

Overview

The noise is measured in accordance with EN ISO 1680 in a dead room. It is specified as A-weighted enveloping surface sound pressure level L_{pA} in dB (A). This value is the spatial average value of the sound pressure levels measured at the measuring surface. The measuring surface is a cube 1 m away from the surface of the motor. The sound power level is also specified as L_{WA} in dB (A). The specified values are valid at 50 Hz and rated power (see the selection and ordering data). The tolerance is +3 dB. Noise values for motors in converter operation on request.

To reduce noise levels, 2-pole motors of frame size 132 S and higher can be equipped with a unidirectional axial fan. The values are listed in the table "Low-noise version" below.

Clockwise rotation:

Order code **F77**

Counterclockwise rotation:

Order code **F78**

Second shaft extension and/or mountings (mounting of brake, separately driven fan or encoder) not possible.

Low-noise version

Motor series	Frame size	2-pole motors	
		L_{pA} dB (A)	L_{WA} dB (A)

Introduction

Mechanical version

Bearings and lubrication

Overview

Bearing lifetime (nominal lifetime)

The nominal bearing lifetime is defined according to standardized calculation procedures (ISO 281) and is reached or even exceeded for 90 % of the bearings when the motors are operated in compliance with the data provided in the catalog.

Under average operating conditions, a lifetime (L_{10h}) of 100 000 hours can be achieved.

Generally, the bearing lifetime is defined by the bearing size, the bearing load, the operating conditions, the speed and the grease lifetime. A bearing lifetime calculation is possible on request.

Bearing system

The bearing lifetime of motors with horizontal mounting is 40 000 hours if there is no additional axial loading at the coupling output and 20 000 hours when utilized according to the maximum admissible load. This assumes that the motor is operated at 50 Hz. The nominal bearing lifetime is reduced for converter operation at higher frequencies.

In order to achieve the calculated lifetime in continuous operation, the admissible vibration values (measured at bearing plate) must be determined according to evaluation zones A and B stipulated in ISO 10816. If higher vibration velocities occur in operation (e.g. with option **H02**), special measures must be taken (please inquire).

Due to their physical characteristics, variable-speed motors have a different bearing lifetime under the same load conditions – this relationship is linear, i.e. if the frequency increases by 20 % from 50 Hz to 60 Hz, the lifetime decreases by 20 % from 20 000 to 16 000 hours under the load conditions specified in the catalog.

If the frequency falls by 20 % from 50 Hz to 40 Hz, under the load conditions specified in the catalog, the lifetime rises by 20 % from 20 000 to 24 000 hours.

It should be observed that, for types of construction IM B6, IM B7, IM B8, IM V5, and IM V6, the belt tension is only permitted to act parallel to the mounting plane or towards the mounting plane and the feet must be supported. Both feet must be secured for foot-mounting types of construction.

In the basic bearing system, the floating bearing is situated at the drive end (DE) and the located bearing is situated at the non-drive end (NDE).

The bearing system is axially preloaded with a spring element at the drive end (DE) to ensure smooth running of the motor without play (see Fig. 1 in the diagrams of bearings on page 1/65).

From frame size 160 upwards, the located bearing is axially secured at the non-drive end (NDE). Up to frame size 132, an additional axially-secured located bearing can be supplied on the non-drive end (NDE) complete with a retaining ring (see Fig. 2 in the diagrams of bearings on page 1/65).
Order code **L21**

On request, the located bearing can also be supplied at the drive end (DE) (see Fig. 3 in the diagrams of bearings on Page 1/65). A located bearing at the drive end (DE) is recommended when gearing is installed or pumps and fans are mounted directly on the motor shaft.

Order code **L20**

For increased cantilever forces (e.g. belt drives), reinforced bearings can be used at the drive end (DE).

Order code **L22**

1LE1, 1MB1, and 1PC1 motors can be supplied with reinforced bearings (size range 03) at both ends.

In this case, the bearing plates are made of cast iron (standard for series 1LE16 motors).

Order code **L25**

A measuring nipple for SPM shock pulse measurement can be mounted to check bearing vibration. The motors have an M8 tapped hole for each bearing plate and a measuring nipple with a protective cap. If a second tapped hole is provided, it is fitted with a sealing cap. Not possible for frame sizes < 100.

Order code **Q01**

Bearing selection for increased cantilever forces (see the Table "Bearing selection for 1LE10, 1MB10, and 1PC10 motors – Bearings for increased cantilever forces" on page 1/61) – for the maximum axial load, see page 1/71 onwards.

Bearing insulation

To prevent damage caused by bearing currents, insulated bearings can be supplied for frame sizes 225 to 355 – they are recommended for motors from frame size 225 upwards.

- **L50** (DE bearing insulation) means NDE located bearing as standard
- **L51** (NDE bearing insulation) means DE located bearing as standard
- **L50 + L51** (insulated DE and NDE bearings) means NDE located bearing as standard
- Combination of order codes **L50** or **L51** or **L50 + L51** with **L22** (bearing version for increased cantilever forces) means NDE located bearing as standard.

According to IEC 60034-1-11, it is up to the user in the case of DE bearing insulation (order code **L50**) + NDE bearing insulation (order code **L51**) to ensure grounding of the rotor.

The rotor grounding can be implemented either in the system via the coupled driven machine or in the motor via a grounding brush.

The grounding brush (order code **L52**) must always be provided when the driven machine is connected to the motor via an insulating coupling or an insulating belt output shaft.

Permanent lubrication

On motors equipped with permanent lubrication, the bearing grease lifetime is matched to the bearing lifetime. This can, however, only be achieved if the motor is operated in accordance with the catalog specifications.

In the basic version, the motors have permanent lubrication.

Overview (continued)**Regreasing**

For motors which can be regreased at defined regreasing intervals, the bearing lifetime can be extended and/or unfavorable factors such as temperature, mounting conditions, speed, bearing size, and mechanical load can be compensated.

This regreasing option is possible in the following frame sizes:

- Frame sizes 100 to 160: M8 × 1 acc. to DIN 71412-A (conical lubricating nipple)
- Frame sizes 180 to 315: M10 × 1 acc. to DIN 3404-A (flat lubricating nipple).

Order code L23

(frame sizes ≥ 280 basic version, for the Performance Line motors of frame sizes ≥ 160 basic version)

A regreasing device with M10 × 1 lubricating nipple to DIN 71412-A can be optionally provided for frame sizes 180 to 315.

Order code L19

In the case of motors equipped with regreasing device, information regarding regreasing intervals, quantity of grease, type of grease and any additional data is provided on the lubrication plate or rating plate. For regreasing intervals for the basic version, see the Table "Grease lifetime and regreasing intervals for horizontal installation". For motors with a mounted holding brake (order code **F01**) a regreasing device cannot be installed, including up to FS 160.

Mechanical stress and grease lifetime

High speeds that exceed the rated speed with converter operation and the resulting increased vibrations alter the mechanical running smoothness and the bearings are subjected to increased mechanical stress. This reduces the grease lifetime and the bearing lifetime (please inquire where applicable).

The use of rigid couplings should be avoided as far as possible. For converter operation in particular, compliance with the mechanical limit speeds $n_{\max}$ at maximum supply frequency $f_{\max}$ is essential, see the following table "Mechanical limit speeds $n_{\max}$ at maximum supply frequency $f_{\max}$ ".

Overview (continued)**Bearing selection table for 1LE15, 1MB15, 1LE16, and 1MB16 motors (bearings for increased cantilever forces – order code L22)**

For NU bearings (cylindrical roller bearings), in contrast to ball bearings, a minimum cantilever force is required. Cylindrical roller bearings are not suitable for coupling output.

$$F_{\min} \sim F_{\max}/2$$

Admissible cantilever forces

In order to calculate the admissible cantilever forces for a radial load, the line of force (i.e. the centerline of the pulley) of the cantilever force F_Q (N) must be within the free shaft extension (dimension x).

Dimension x (mm) is the distance between the point of application of the force F_Q and the shaft shoulder. The dimension $x_{\max}$ corresponds to the length of the shaft extension.

Total cantilever force $F_Q = c \cdot F_U$

The pre-tension factor c is a value gained from experience from the belt manufacturer. The following approximate value can be assumed:

For normal flat leather belts with an idler pulley $c = 2$;
for V-belts $c = 2$ to 2.5 ;
for special synthetic belts (depending on the type of load and type of belt) $c = 2$ to 2.5 .

The circumferential force F_U (N) is calculated using the following equation

$$F_U = 2 \cdot 10^7 \frac{P}{n \cdot D}$$

F_U circumferential force in N
 P rated motor power (transmitted power) in kW
 n rated motor speed in rpm
 D belt pulley diameter in mm

For frame sizes > 250 standard version.

AGMA

Overview

The drainage of condensed water is an important aspect of proper motor maintenance.

Drainage of condensed water is made easy by rotating the outer cap.

If there are condensate drain holes present, these must be opened at regular intervals, depending on climatic conditions and in accordance with the motor operating instructions.

"Modifiable T-Drain" is closed on delivery of the motor and corresponds to degree of protection IP55/IP56.

When opened, it corresponds to degree of protection IP45/IP46. The opened T-Drain can be used for continuous drainage of condensed water in environments with low amounts of dust.

**Note:**

Motors of the LOHER CHEMSTAR series can be designed in IP66, see Catalog D 83.1.

A screw-mounted cover (made of sheet metal or plastic depending on shaft height) is included as standard for horizontal types of construction and types of construction with shaft pointing upwards (14th position of the Article No. letter **A, T, U, V, D, F, H, J, K, L, N**) in combination with condensation drainage holes, order code (**H03**) to facilitate assembly/disassembly.

When the motors are used or stored outdoors, we recommend that they be kept under some sort of additional cover so that they are not subjected to direct intensive solar radiation, rain, snow, ice or dust over a long period of time. In such cases, technical consultation may be appropriate.

When the motors are used outdoors or in a corrosive environment, it is recommended that non-rusting screws are used externally.

Order code **H07**

Vibration-proof version

Continuous vibration resistance to class 3M4 according to IEC 721-3-3:1994 (order code **H02** in combination with order code **G01, G02, G04, G05, G06, G11, and G12** or **F70** on request only).

Order code **H02**

For availability of individual options for the relevant motor series, see section "Special versions" in the respective sections of the catalog.

Introduction

Mechanical version

Lifting eyes and transport

Overview

1LE10, 1MB10 and 1PC10 motors without feet have four cast lifting eyes as standard, each offset by 90°; in the case of screwed-on feet, two lifting eyes are covered by the feet, so in this case only two lifting eyes are available for use. This data is only valid up to frame size 200.

Housing material

Motor series	Frame size	Housing material	Housing feet
1LE10, 1PC1 ²⁾	63 ... 160	Aluminum alloy	cast ¹⁾
	180 ... 200	Aluminum alloy	screwed on ¹⁾
1MB10	100 ... 160	Aluminum alloy	cast ¹⁾
1LE15 1MB15 1PC1301 ³⁾	71 ... 315	Cast iron	cast ¹⁾
1LE16 1MB16	100 ... 315	Cast iron	cast ¹⁾

Arrangement of lifting eyes/eyebolts (standard)

Frame size	Terminal box position	Cast-iron motors	Aluminum motors	Arrangement of eyebolts	Thread size
63	–	–	None	–	–
71	–	None	None	–	M8
80	Short housing	None	None	–	M8
	Top (long housing)	Two eyebolts		Left/right center	
	Left/right (long housing)	One eyebolt		Top center	
90	Top	Two eyebolts	None	Left/right center	M8
	Left/right	One eyebolt		Top center	
100		Depending on type of construction ⁴⁾	Lifting eyes	Top;	M8
				Left DE side/ right NDE side ¹⁰⁾	
112					M10
132					M12
160					M16
180		Two eyebolts ¹⁰⁾			M16
200					M20
225		Two eyebolts ¹¹⁾	–	^{5) 6) 7)}	M16
250					M24
280					M30
315 S/M ¹²⁾					
315 L		Four eyebolts		top;	
315 L (1LE5)		Two eyebolts		left/right DE and NDE side ^{8) 9)}	
355 M/L (1LE5)					

AGMA

¹⁾ Basic version, cast feet: Special version "Screwed-on feet (instead of cast)" with digits **5**, **6**, and **7** in the 16th position of Article No. or digit **4** with order code **H01**. Screwed-on feet as standard for 1LE10 motors in frame sizes 180 and 200 and motors with increased power.

²⁾ Aluminum motors in frame sizes 80 and 90 and 1PC10 motors in frame sizes 100 to 160 without lifting eyes. Aluminum motors in frame sizes 100 to 200 with cast lifting eyes (does not apply to 1PC10 and 1MB10 motors in frame sizes 180 and 200).

³⁾ 1LE16 motors frame size 100 and above, 1PC1301 motors frame size 180 and above.

⁴⁾ Two eyebolts for
 - IM B5, IM B14, IM V1 or
 - IM B34, IM B35 with **H01** or left/right, side terminal box position.
 Lifting eyes for
 - IM B3 or
 - IM B34, IM B35 without **H01** or non-side left/right terminal box position.

⁵⁾ For IM B3; IM B5: top; DE side left / NDE side right.
 With rotation of the terminal box through 180° (R12): top; NDE side left / DE side right.

⁶⁾ For IM V1: top; NDE side right; down; NDE side left.

⁷⁾ For IM V3: top; DE side left; down; DE side right.

⁸⁾ For IM V1: NDE side, left/right; top/bottom.

⁹⁾ For IM V3: DE side, left/right; top/bottom.

¹⁰⁾ With rotation of the terminal box through 180° (R12): top; NDE side left / DE side right.

¹¹⁾ Motors with brakes have four top eyebolts.
 For IM V1: NDE side, left/right; top/bottom.
 For IM V3: DE side, left/right; top/bottom.

¹²⁾ The assignment 315 L is used for 1000 kg and over.

Overview

Brakes as well as rotary encoders of the "modular and special technology" can be retrofitted. The motor must be prepared for this. This is possible for all 1LE1 motors (with the exception of 1LE1 with option **F90** – version "Forced-air cooled motors without external fan and fan cover").

Preparation of the shaft extension at NDE can be ordered with the option "Prepared for mountings, only center hole", order code **G40** for the following frame sizes and mountings:

- Frame sizes 80 to 315: brakes with order code **F01**
- Frame sizes 71 and 90: only rotary encoders with order codes **G01**, **G02**, **G11**, or **G12** from the "modular technology" range
- Frame sizes 100 to 315: all rotary encoders from the "modular and special technology" ranges

Dimensions of center holes

Frame size	Ø	L (drilling depth)
100	16 ^{H7}	34
112	16 ^{H7}	34
132	22 ^{H8}	39
160	28 ^{H8}	42

The length of the motor does not change because the shaft extension is still under the fan cover.

For motors ordered with order code **G40**, the following conversion combinations are possible:

- Frame sizes 71 and 90:
Either brakes with order code **F01** or rotary encoders with order code **G01** or **G02** from the "modular technology". The combination of brake (**F01**) and rotary encoder (**G01/G02**) is not possible.
- Frame sizes 100 to 315:
Brakes with order code **F01** or rotary encoders from the "modular and special technology". The combination of brake (**F01**) and rotary encoder is possible.

Conversion is performed exclusively by the authorized contractual partners of Siemens.

For motors of series 1LE15 and 1LE16 frame sizes 100 to 315, grounding brushes are available for converter operation. Order code **L52**. Please contact your local Siemens office for advice.

For mountings, such as rotary encoders, supplied by the customer, the following applies:

For the rotary encoders:

- 1XP8012-10, order code **G01**
- 1XP8012-20, order code **G02**
- Sendix 5020, order code **G11** and **G12**

from the "modular technology" this preparation of the shaft extension on NDE can be ordered with the option "Prepared for mounting with shaft D12".

Order code **G41**

The length of the motor increases by Δl due to option **G41**. For an explanation of the additional dimensions and weights, see "Modular technology" "Dimensions and weights".

For the rotary encoders:

- LL 861 900 220, order code **G04**
- HOG 9 DN 1024 I, order code **G05**
- HOG 10 D 1024 I, order code **G06**

from the "special technology" this preparation of the shaft extension on NDE can be ordered with the option "Prepared for mounting with shaft D16" for motors of frame sizes 100 to 160 only.

Order code **G42**

The length of the motor increases by Δl due to option **G42**. For an explanation of the additional dimensions and weights, see "Modular technology" "Dimensions and weights".

Motors that are prepared for mountings supplied by the customer (order codes **G41**, **G42**) are supplied without a protective cover as standard. These mountings can be installed by the customer.

If a protective cover is requested as a cover or mechanical protection for mountings provided by the customer, this can be ordered with order code **G43**.

This protective cover is designed and mounted differently as described below according to frame size:

Frame sizes 71 to 90 and 180 to 200:

Motors ordered with order code **G43** are fitted as standard with a screw-mounted cover (made of sheet metal or plastic depending on shaft height). The protective cover is mounted in the factory. To install the mountings supplied by the customer, the protective cover must be removed beforehand by unscrewing the external fixing screws and reattached afterwards. Protective covers for motors of these frame sizes are not suitable for mountings that correspond to the shape and size of the rotary encoders of the "special technology" (**G04**, **G05**, **G06**, see above).

Frame sizes 100 to 315:

The protective cover must be installed by the customer in accordance with the assembly instructions supplied. It has supports of varying length that can be used for installation according to the height of the planned mountings.

The standard protective cover (order code **H00**) is not suitable for protection of additional mountings, such as rotary encoders.

Order codes **G40**, **G41**, **G42** are not possible in conjunction with order code **L00** vibration severity grade B.

Order code **G43** is only appropriate in combination with order codes **G41** and **G42**, and not in combination with **G40**.

Introduction

Mounting technology

Modular technology

Overview

The 1LE and 1FP motors (with the exception of 1LE1 with option **F90** – version "Forced-air cooled motors without external fan and fan cover" and 1PC1) can be used in a much wider range of applications (e.g. as motors with brakes) if the following modules are mounted:

- Separately driven fan
- Brake
- Rotary pulse encoder

Separately driven fan

The use of a separately driven fan is recommended to increase motor utilization at low speeds and to limit noise generation at speeds significantly higher than the synchronous speed. Both of these results can only be achieved with converter operation. Please inquire about traction and vibratory operation.

The separately driven fan can be supplied already fitted, order code **F70**. There is no automatic adjustment of the voltage for the separately driven fan when ordering a "special voltage" for the motor. This must be specified in addition using the **Y81** option.

The brake must always be mounted in the factory for safety reasons. The rotary pulse encoder and/or the separately driven fan can also be retrofitted.

The degree of protection of the motors with modular technology is IP55. Higher degrees of protection on request.

Attaching rotary pulse encoder, brake, and separately driven fan increases the length of the motor by dimension Δl . For explanations of the additional dimension and weights, see "Mounting technology" and "Dimensions and weights" from page 1/106.

It can also be ordered separately and retrofitted. For selection information and article numbers, see the section "Accessories" (available soon). A rating plate listing all the important data is fitted to the separately driven fan. Please note the direction of rotation of the separately driven fan (axial-flow fan) when connecting it. Admissible coolant temperatures $CT_{min} -25\text{ °C}$, $CT_{max} +65\text{ °C}$ ¹⁾, lower/higher coolant temperatures are available on request.

When the separately driven fan is mounted, the length of the motor increases by Δl . For explanations of the additional dimension and weights, see "Mounting technology" and "Dimensions and weights" from page 1/106.

For article numbers and type details, see operating instructions.

¹⁾ For single-phase variants (1 AC) of frame size 160, the admissible coolant temperature CT_{max} is $+50\text{ °C}$.

Overview (continued)**Brakes**

The brakes with order code **F01** (**F02** brake for increased frequency of operation for SIMOTICS GP motors on request) are designed to be spring-operated brakes. When the brake is ordered, the supply voltage must be specified. For an explanation of the supply voltage, see the descriptions of each brake model in "Modular technology".

For the design of the braking time, run-on revolutions, braking energy per braking procedure as well as the lifetime of the brake linings, see "Configuration of motors with brakes" on page 1/92.

When a brake is mounted, the length of the motor increases by Δl . For explanations of the additional dimension and weights, see "Mounting technology" and "Dimensions and weights" from page 1/106.

*The brake can be retrofitted by authorized partners. The motor must be prepared for this. When the motor is ordered, the option "Prepared for mountings, center hole only" order code **G40** must be specified (see "Mechanical version and degrees of protection" on page 1/79).*

Ambient temperature

- -40°C to $+45^{\circ}\text{C}$ (with nominal excitation) for SFB-SH brake
- -40°C to $+75^{\circ}\text{C}$ (with double excitation) for SFB-SH brake
- -20 to $+40^{\circ}\text{C}$ holding/operating brake (standard 2LM8)
- up to $+60^{\circ}\text{C}$ only as holding brake
- -20 to $+60^{\circ}\text{C}$ holding/operating brake only for KFB and FDX brake

Definition of duty type

- **Operating brake:**
The motor shaft can be braked from full operating speed down to zero speed of the motor. All the kinetic energy produced by the drive train is converted to heat by friction during braking. Braking energy is produced at $n > 0$ rpm. The maximum permissible switching frequency must be taken into account. When this brake is used, installation of a separately driven fan is recommended in order to ensure adequate cooling when the motor is at a standstill. The operating brake is also capable of functioning as a holding brake.
- **Holding brake:**
The purpose of braking or "holding" the motor shaft is merely to suppress unintended rotation caused by externally applied torque forces, e.g. when a load is suspended from a crane rope drum. The holding brake is primarily deployed when the motor is at a standstill ($n = 0$ rpm) by holding the motor shaft or is close to $n = 0$ rpm and coasting down to a standstill. As a result, no additional braking energy or braking heat is transferred to the motor.

Note:

A holding brake must not be used as an operating brake as it could then cause danger to life and damage to property.

Bridge rectifier / half-wave rectifier

Brakes are connected through a standard bridge or half-wave rectifier or directly to the 2LM8/SFB-SH brake. See the circuit diagrams below.

Half-wave rectifier 400 V AC

Bridge rectifier 230 V AC

Brake connection for 24 V DC

Introduction

Mounting technology

Modular technology

Overview (continued)

2LM8 spring-operated disk brake

Motor series

This brake is the standard brake for 1LE1/1FP1 motors in frame sizes 63 to 225 (except for 1LE1 with order code **F90** version "Forced-air cooled motors without external fan and fan cover").

Other characteristics of the 2ML8 brake

The 2LM8 brake has IP55 degree of protection.

Please inquire if motors with brakes are to be operated below the freezing point or in conjunction with very humid environments (e.g. close to the sea) with long standstill times. Please also inquire if motors with brakes are to be used for low-speed converter operation.

Design and mode of operation

The brake takes the form of a single-disk brake with two friction surfaces.

The braking torque is generated by friction when pressure is applied by one or more pressure springs in the de-energized state.

The brake is released electromagnetically.

When the motor brakes, the rotor which can be axially shifted on the hub or the shaft is pressed via the armature disk against the friction surface by means of the springs. In the braked state, there is a gap S_{Gap} between the armature disk and the solenoid component. To release the brake, the solenoid is energized with DC voltage. The resulting magnetic force pulls the armature disk against the spring force on to the solenoid component. The spring force is then no longer applied to the rotor, which can rotate freely.

Design of the 2LM8 spring-operated disk brake

Rating plate

The following brake data is specified on the motor rating plate:

- Brake type
- Supply voltage
- Frequency
- Current
- Temperature class
- Braking torque

Voltage and frequency

The solenoids and the brake rectifier are designed for connection to the following voltages or can be supplied for the following voltages:

- Brake supply voltage 24 V DC
Order code **F10**
- Brake supply voltage 230 V AC
Order code **F11**
- Brake supply voltage 400 V AC
(directly at the terminal strip)
Order code **F12**

When 60 Hz is used, the voltage for the brake must not be increased!

Order codes **F10**, **F11**, and **F12** must only be used in conjunction with order code **F01**.

Lifetime of the brake lining

The braking energy L_N until readjustment of the brake depends on various factors. The main influencing factors include the masses to be braked, the operating speed, the switching frequency, and therefore the temperature at the frictional surfaces. This means it is not possible to specify a value for the friction energy until readjustment that is valid for all operating conditions.

When used as an operating brake, the specific frictional surface wear (wear volume for the frictional work) is approximately 0.05 to 2 cm³/kWh.

Overview (continued)

Operating values for spring-operated brakes with standard excitation

AGMA

¹⁾ For 400 V AC and for 24 V DC, the power can deviate by up to +10 % as a function of the selected supply voltage.

²⁾ The specified switching times are valid for switching on the DC side with a rated release travel and with the coil already warm. They are average

values, which may vary depending on factors such as the rectifier type and the release travel. The brake application time for switching on the AC side, for example, is approximately 6 times longer than for switching on the DC side.

Mounting technology

Modular technology

Overview (continued)

Maximum admissible speeds

The maximum admissible speeds from which emergency stops can be made are listed in the next table. These speeds should be considered as guide values and must be checked for the specific operating conditions.

The maximum admissible friction energy depends on the switching frequency and is shown for the individual brakes in the following diagram. Increased wear can be expected when the brakes are used for emergency stops.

For motor frame size	Brake type	Maximum admissible speeds			Changing the braking torque			Readjusting the air gap		
		Max. adm. operating rpm if max. operating energy utilized	Max. adm. no-load rpm with emergency stop function for horizontal mounting position	Max. adm. no-load rpm with emergency stop function for vertical mounting position	Reduction per notch	Dimension "O ₁ "	Min. braking torque	Rated air gap S _{Gap rated}	Maximum air gap S _{Gap max.}	Minimum rotor thickness h _{min.}

Overview (continued)**Changing the braking torque**

The brake is supplied with the braking torque already set. For 2LM8 brakes, the torque can be reduced to the dimension O_1 by unscrewing the adjusting ring with a hook wrench. The braking torque changes by the values shown in the above table for each notch of the adjusting ring.

Readjusting the air gap

Under normal operating conditions, the brake is practically maintenance-free. The air gap S_{Gap} must only be checked at regular intervals if the application requires an extremely large amount of frictional energy and readjusted to the rated air gap $S_{Gap rated}$ at the latest when the maximum air gap $S_{Gap max}$ is reached.

**Connection**

Labeled terminals are provided in the main terminal box of the motor to connect the brake.

The AC voltage for the brake excitation winding is connected to the two free terminals of the rectifier block (~).

The brake can be released when the motor is at a standstill by separately exciting the solenoid. In this case, an AC voltage must be connected at the rectifier block terminals. The brake remains released as long as this voltage is present.

The rectifiers are protected against overvoltages by varistors in the input and output circuits.

For 24 V DC brakes, the brake terminals are directly connected to the DC voltage source.

For this purpose, see the circuit diagrams on page 1/81.

Fast brake application

If the brake is disconnected from the line supply, the brake is applied.

The application time for the brake disk is delayed as a result of the inductance of the solenoid (shutdown on the AC side). This results in a considerable delay before the brake is mechanically applied. In order to achieve short brake application times, the circuit must be interrupted on the DC side. To realize this, the wire jumpers, located between contacts 1+ and 2+ at the rectifier, are removed and replaced by the contacts of an external switch.

For this purpose, see the circuit diagrams on page 1/81.

Mechanical manual brake release with lever

The brakes can be supplied with a mechanical manual release with lever.

Order code **F50**

The dimensions of the brake lever depend on the motor frame size and can be read from the dimensional drawing generator for motors in the DT Configurator tool for low-voltage motors.

Modular technology

Overview (continued)

KFB spring-operated brake

KFB spring-operated brake

The KFB solenoid double-disk spring-operated brake is a safety brake that brakes the motor if the supply is disconnected (power failure, emergency stop). The KFB brake with degree of protection IP67 is mainly used for electric motors for traversing, cross-traversing and lifting gear in cranes as well as for special industrial applications.

Motor series

This brake is the standard brake for 1LE1 motors in frame sizes 250 to 315. For frame sizes 180 to 225, apart from the standard brake 2LM8, KFB brakes can also be supplied. Special brake selections are available on request.

Design and mode of operation

When the brake current is switched on, an electromagnetic field develops which overcomes the spring force of the brake. The corresponding modules, including the motor shaft, can rotate freely. The brake is released. If the brake current is switched off or if there is a power failure, the electromagnetic field of the brake disappears. The mechanical braking energy is transferred to the motor shaft. The motor is braked.

Design of KFB spring-operated brakes

Other characteristics of the KFB brake

- High degree of protection IP67.
- Corrosion-resistant in seawater and in the tropics.
- The brake is a dynamic brake, not simply a holding brake. For this reason there is less wear, especially in the case of emergency stops (commissioning).
- High wear reserves – repeated stepless air gap readjustment is possible. This results in extremely long operating times and low service and operating costs.
- The function and wear can be monitored with microswitches and proximity switches. Microswitch On/Off is standard for 1LE motors, frame size 250 to 315. Microswitch On/Off is not standard for 1LE motors, frame size up to 225. Anti-condensation heating is possible as an option.
- Fully functional brake for housing acceptance test. Visual inspection of brake is possible during operation.
- The brake (air gap) can be adjusted in the factory, for example, and mounted on the drive motor without further adjustments.
- The wear parts can be replaced without great outlay. After the housing has been opened (three screws), it is easy to replace the friction plate. It is not necessary to disassemble the entire brake.

Voltage and frequency

The solenoids and the brake rectifier can be connected to the following voltages:

1 AC 50 Hz 230 V $\pm 10\%$

When 60 Hz is used, the voltage for the brake must not be increased!

The brake can also be supplied for other voltages:

- Brake supply voltage: 24 V DC
Order code **F10**
- Brake supply voltage: 230 V AC
Order code **F11**
- Brake supply voltage: 400 V AC (directly at the terminal strip)
Order code **F12**

Order codes **F10** and **F12** may only be used in conjunction with order code **F01**.

Fast brake application

Not available for the KFB brake.

Mechanical manual brake release with lever

The brake can be released manually with screws as standard. Mechanical manual release with a lever can be ordered with order code **F50**.

The dimensions of the brake lever depend on the motor frame size and can be read from the dimensional drawing generator for motors in the DT Configurator tool for low-voltage motors. Up-to-date data are available from the brake manufacturer.

Overview (continued)**Connection**

Labeled terminals are provided in the main terminal box of the motor to connect the brake.

KFB brakes are connected through a standard bridge or half-wave rectifier.

A special circuit is not required. Optimal switching times are achieved without the need to use special circuits.

For this purpose, see the circuit diagrams on page 1/81.

Maximum admissible speeds

The maximum admissible speeds from which emergency stops can be made are listed in the next table. These speeds should be considered as guide values and must be checked for the specific operating conditions.

The maximum admissible friction energy depends on the switching frequency and is shown for the individual brakes in the following diagram. Increased wear can be expected when the brakes are used for emergency stops.

AGMA

¹⁾ The standard brake for frame sizes 180 to 225 is the 2LM8 brake. KFB brake on request.

²⁾ The standard brake for frame sizes 250 to 315 is the KFB brake.

³⁾ The dynamic braking torque also depends on the load data; temperatures in excess of the maximum admissible lining surface temperatures must be avoided.

Overview (continued)**SFB-SH solenoid double-disk spring-operated brake****Motor series**

This brake is the standard brake for 1LE5 motors in frame sizes 315 to 355.

Special brake selections are available on request.

SFB-SH solenoid double-disk spring-operated brake

SFB-SH solenoid double-disk spring-operated brakes are safety brakes that are mechanically operated on a power failure. This ensures that the brake still works during a power failure. These brakes are designed for dry running, must only ever be operated in a safe state, and only installed, commissioned, operated, and maintained by specially trained installation personnel. The brakes of the SFB-SH type series have an increased braking torque due to use of a different friction material and are used for emergency stops as a dynamically loaded brake with a safety margin.

Other characteristics of the SFB-SH brake

- High degree of protection IP67.
- Corrosion-resistant in seawater and in the tropics.
- High wear margins – simple air-gap adjustment. This results in extremely long operating times and low service and operating costs.
- The function and wear can be monitored with microswitches and proximity switches. Microswitch On/Off is standard for 1LE5 motors. Anti-condensation heating is possible as an option.
- Fully functional brake for housing acceptance test. Visual inspection of brake is possible during operation.
- The brake (air gap) can be adjusted in the factory, for example, and mounted on the drive motor without further adjustments.
- The wear parts can be replaced without great effort. After the housing has been opened (three acorn nuts), it is easy to replace the friction plate. It is not necessary to disassemble the entire brake.

Design and mode of operation

When the brake current is switched on, an electromagnetic field develops which overcomes the spring force of the brake. The corresponding modules, including the motor shaft, can rotate freely. The brake is released. If the brake current is switched off or if there is a power failure, the electromagnetic field of the brake disappears. The mechanical braking energy is transferred to the motor shaft. The motor is braked.

Design of the SFB-SH solenoid double-disk spring-operated brake

Voltage and frequency

The solenoids and the brake rectifier can be connected to the following voltages:

1 AC 50 Hz 230 V $\pm 10\%$

When 60 Hz is used, the voltage for the brake must not be increased!

The brake can also be supplied for other voltages:

- Brake supply voltage: 24 V DC
Order code **F10**
- Brake supply voltage: 230 V AC
Order code **F11**
- Brake supply voltage: 400 V AC
(directly at the terminal strip)
Order code **F12**

Order codes **F10** and **F12** may only be used in conjunction with order code **F01**.

Introduction

Mounting technology

Modular technology

Overview (continued)

Connection

Labeled terminals are provided in the main terminal box of the motor to connect the brake.

The AC voltage for the brake excitation winding is connected to the two free terminals of the rectifier block (~). The rectifier is located in the main terminal box and must be connected in the customer's switchboard.

The brake can be released when the motor is at a standstill by separately exciting the solenoid. In this case, an AC voltage must be connected at the rectifier block terminals. The brake remains released as long as this voltage is present.

For 24 V DC brakes, the brake terminals are directly connected to the DC voltage source.

For this purpose, see the circuit diagrams on page 1/81.

Maximum admissible speeds

The maximum admissible speeds from which emergency stops can be made are listed in the next table. These speeds should be considered as guide values and must be checked for the specific operating conditions.

The maximum admissible friction energy depends on the switching frequency and is shown for the individual brakes in the following diagram. Increased wear can be expected when the brakes are used for emergency stops.

Overview (continued)

Configuration of motors with brakes

Braking time

The time it takes the motor to come to a standstill comprises two components:

- The application time of the brake t_2
- The braking time t_{Br}

$$t_{Br} = \frac{J \cdot n_{rated}}{9.55 \cdot (T_B \pm T_L)}$$

t_{Br} Braking time in s
 J Total moment of inertia in kgm^2
 n_{rated} Rated speed of the motor with brake in rpm
 T_B Rated braking torque in Nm
 T_L Average load torque in Nm (If T_L supports the braking operation, T_L is positive)

Braking energy per braking operation Q_{adm}

The braking energy per braking operation in Nm comprises the energy of the moments of inertia to be braked Q_{Kin} and the energy Q , which must be applied in order to brake against a load torque:

$$Q_{adm} = Q_{Kin} + Q$$

- The energy of the moments of inertia in Nm

$$Q_{Kin} = \frac{J \cdot n_{rated}^2}{182.4}$$

n_{rated} Rated speed before braking in rpm
 J Total moment of inertia in kgm^2 . The mass moment of inertia J specified in the formula corresponds to the total moment of inertia of all braked masses referred to the motor/brake speed.

- Braking energy on emergency trip

The braking energy for occasional emergency trips must be checked to ensure that it does not cause the brake to overheat. Please refer to table "Technical specifications of brakes" for admissible values. The braking energy produced for traversing gear can be calculated approximately with the following equation:

$$Q = \frac{J_{tot} \cdot n_{Br}^2}{182.4 \cdot 10^3} \cdot \frac{T_{Br}}{T_{Br} \pm T_L}$$

Q Energy capability/braking energy in kJ
 T_{Br} Braking torque in Nm
 T_L Total of all load torques in Nm referred to the brake (motor) shaft
 n_{Br} Speed of brake (motor) shaft in rpm
 J_{tot} Total moment of inertia to be braked in kgm^2 reduced to the brake (motor) shaft
 T_L is positive if it supports braking (e.g. hoisting a load)
 T_L is negative if it counteracts braking (e.g. lowering a load)

The total moment of inertia J_{tot} is the sum of the individual moments of inertia of the system components to be braked, reduced to the brake (motor) shaft, and the moments of inertia of the linear-motion masses. The equivalent mass inertia J_{Eqv} of a linear-motion mass m with velocity v , referred to the brake (motor) speed n_{Br} , is calculated as follows:

$$J_{Eqv} = 91.2 \cdot m \cdot \left(\frac{v}{n_{Br}}\right)^2$$

m Mass of the linear-motion load in kg
 v Velocity of the linear-motion load in m/s
 n_{Br} Speed of brake (motor) shaft in rpm

The velocity and/or speed to be entered here must equal the maximum values in normal operation. An increase in velocity resulting from wind forces may also need to be taken into account.

Definition of switching times (VDI 2241)

Brake switching times

Switching times:

- t_1 Brake application time
- t_2 Disconnection time
- t_3 Slip time
- t_{11} Response delay
- t_{12} Rise time

Run-on revolutions U

The number of run-on revolutions U of the motor with brake can be calculated as follows:

$$U = \frac{n_{rated}}{60} \left(t_1 + \frac{t_{Br}}{2} \right)$$

t_1 Brake application time in ms

Lifetime of the brake lining L and readjustment of the air gap

The brake lining wears due to friction which increases the air gap and the release time for the brake at standard excitation.

In order to calculate the lifetime of the brake lining in terms of operations S_{max} , the lifetime of the brake lining L in Nm must be divided by the braking energy Q_{adm} :

$$S_{max} = \frac{L}{Q_{adm}}$$

The interval between adjustments N can be calculated in terms of operations by dividing the braking energy L_N that the brake can output until it is necessary to readjust the working air gap by Q_{adm} :

$$N = \frac{L_N}{Q_{adm}}$$

Overview (continued)**FDX spring-operated brake****Motor series**

This brake is provided for 1LE1 motors in frame sizes 225 to 315.

Mode of operation of FDX spring-operated brake (holding brake/operating brake)

The FDX solenoid spring-operated brakes (order code **F04**), with IP67 degree of protection, are quiescent current brakes, meaning that the braking torque is produced by spring force and increased by magnetic force in normal operation.

During the braking operation, the built-in compression springs apply pressure to the rotor that interlocks radially with the machine shaft using the axially moving armature disk. In turn, this applies pressure to the opposing side against the friction surface (→ motor label). The braking torque is produced from the linings of the rotor and the armature disk/friction surface being in contact.

During the brake release process, a magnetic force is produced by applying a direct current via the excitation winding in the solenoid. The armature disk is thereby pulled from the solenoid and the rotor is released.

During the manual brake release process (only available for the brake version with manual brake release), the armature disk is pressed mechanically against the solenoid by operating the manual release lever. The brake can therefore still be released in the event of a power failure, for example.

**Voltage and frequency**

The solenoids and the brake rectifier are designed for connection to the following voltages or can be supplied for the following voltages:

- Brake supply voltage 230 V AC
Order code **F11**
- Brake supply voltage 400 V AC
Order code **F12**

When 60 Hz is used, the voltage for the brake must not be increased!

Order codes **F11** and **F12** may only be used in conjunction with order code **F04**.

Connection

Labeled terminals are provided in the main terminal box of the motor to connect the brake.

The AC voltage for the brake excitation winding is connected to the two free terminals of the rectifier block (~).

The brake can be released when the motor is at a standstill by separately exciting the solenoid. In this case, an AC voltage must be connected at the rectifier block terminals. The brake remains released as long as this voltage is present.

The rectifiers are protected against overvoltages by varistors in the input and output circuits. The function and wear can be monitored with microswitches and proximity switches. Micro-switch On/Off is standard for 1LE1 motors. Anti-condensation heating is possible as an option.

Mechanical manual brake release with lever

The brake can be supplied with a mechanical manual release with lever.

Order code **F50**

The dimensions of the brake lever depend on the motor frame size and can be read from the dimensional drawing generator for motors in the DT Configurator tool for low-voltage motors.

Lifetime

The amount of frictional energy that can be transferred before the rotor must be replaced depends on various factors:

- Mass to be decelerated
- Switching frequency
- Speed
- Resulting temperature on the friction surfaces

As a result, only guide values can be specified for the frictional energy to be transferred until rotor replacement.

Introduction

Mounting technology

Modular technology

1

Overview (continued)

Abbreviations and definitions used (with their units):

T_{LR}	= Motor starting torque (Nm)
T_b	= Braking torque (Nm)
T_{breq}	= Required braking torque (Nm)
$T_{b, rated}$	= Rated torque of the spring-operated brake (Nm)
T_L	= Load torque (Nm)
T_{tot}	= Total torque (Nm)
F	= Force (N)
r	= Lever arm (m)
n	= Speed (rpm)
K	= Safety factor $K \geq 2$
P	= Power (kW)
t	= Overall braking time (ms)
t_{st}	= Startup time (s)
t_B	= Braking time (s)
t_2	= Disconnection time (ms)
t_1	= Application time (ms)
t_{11}	= Response delay (ms)
P_R	= Frictional power (J/s)
W_R	= Friction energy (J)
S	= Switching cycles (brake operations) per second (Hz)
J_E	= Internal moment of inertia (kgm ²)
J_{add}	= Additional moment of inertia (kgm ²)
$J_{2,3..}$	= Moment of inertia (kgm ²)
J_{tot}	= Total moment of inertia (kgm ²)
n_1	= Motor speed (rpm)
$n_{2,3..}$	= Speeds (rpm)

Multiple moments of inertia with different speeds are converted into a moment of inertia relative to the motor shaft:

$$J_{add} = \frac{J_2 \cdot n_2^2 + J_3 \cdot n_3^2 \dots}{n_1^2} \quad (\text{kgm}^2)$$

Torque

A spring-operated brake is designed mainly in accordance with the required braking torque T_{breq} . If the moment of inertia, speed, and admissible braking time of the machine are known, the braking torque of the spring-operated brake can be calculated. If the masses that are to be decelerated by the spring-operated brake are running at a different speed from the shaft decelerated by the spring-operated brake, the moment of inertia of these masses (J_{add}) must be calculated relative to this shaft (see above). In addition, the moment of inertia of the rotor-hub system (J_E) must be taken into account.

Load torque (static loading)

Torque which is present when the system is at a standstill and must be held by the brake. The loading force is converted into the load torque via the relevant lever arm

$$T_L = F \cdot r \quad (\text{Nm})$$

Braking torque (dynamic loading)

A purely dynamic load is present when flywheels, rollers, etc., are to be delayed and the static load torque is negligibly small.

The required braking torque is calculated as follows:

$$T_b = 1.046 \cdot 10^2 \cdot J_{tot} \cdot \frac{n}{t - t_1} \quad (\text{Nm})$$

$$T_{breq} = T_b \cdot K \leq T_{b, rated} \quad (\text{Nm})$$

Dynamic and static loading

Most applications involve dynamic loading as well as static load torque:

$$T_{breq} = (T_b \pm T_L) \cdot K \quad (\text{Nm})$$

$$T_{breq} = (1.046 \cdot 10^2 \cdot J_{tot} \cdot \frac{n}{t - t_1} \pm T_L) \cdot K \quad (\text{Nm})$$

$$T_{breq} \leq T_{b, rated} \quad (\text{Nm})$$

Sign for T_L :

+ T_L = Load torque is applying force (in the direction of motion)

– T_L = Load torque is applying a decelerating force (opposite to the direction of motion)

If both cases occur, the specific configuration is always adapted to the larger torque.

Approximate determination of T_{breq}

If the moment of inertia is not known and if the input power has been defined, the required braking torque is determined as follows:

$$T_{breq} = 9.55 \cdot 10^3 \cdot \frac{P}{n} \cdot K \leq T_{b, rated} \quad (\text{Nm})$$

$$K \geq 2$$

Braking time

General

$$t = 1.046 \cdot 10^2 \cdot J_{tot} \cdot \frac{n}{T_{b, rated} \pm T_L} + t_1 \quad (\text{ms})$$

Sign for T_L :

– T_L = Load torque is applying force (in the direction of motion)

+ T_L = Load torque is applying a decelerating force (opposite to the direction of motion)

Calculation of the starting and braking time for motors

Startup time for motors with brakes

$$t_{st} = J_{tot} \cdot \frac{n_1}{9.55 \cdot (T_{LR} \pm T_L)} + \frac{t_2}{1000} \quad (\text{s})$$

$$J_{tot} = J_E + J_{add} \quad (\text{kgm}^2)$$

Sign for T_L :

+ T_L = Load torque is applying force (in the direction of motion)

– T_L = Load torque is applying a decelerating force (opposite to the direction of motion)

Overview (continued)**Braking time for motors with brakes**

$$t_B = J_{\text{tot}} \cdot \frac{n_1}{9.55 \cdot (T_{b, \text{rated}} \pm T_L)} + \frac{t_1}{1000} \quad (\text{s})$$

Sign for T_L :

- T_L = Load torque is applying force (in the direction of motion)
- + T_L = Load torque is applying a decelerating force (opposite to the direction of motion)

Thermal load

When braking, friction energy is applied during the slip phase, which releases thermal energy.

Friction energy per braking operation

$$W_R = J_{\text{tot}} \cdot n^2 \cdot \frac{T_{b, \text{rated}}}{182.5 \cdot (T_{b, \text{rated}} \pm T_L)} \quad (\text{J})$$

Sign for T_L :

- T_L = Load torque is applying force (in the direction of motion)
- + T_L = Load torque is applying a decelerating force (opposite to the direction of motion)

The friction energy per braking operation must be no greater than the admissible value $W_{R\text{max}}$

$$W_R \leq W_{R\text{max}} \quad (\text{J})$$

Frictional power

$$P_R = W_R \cdot S \quad (\text{J/s})$$

The friction energy must be no greater than the admissible value $P_{R\text{max}}$

$$P_R \leq P_{R\text{max}} \quad (\text{J/s})$$

Connection

Load rating of the rectifier diodes as a function of the ambient temperature:

Block diagram:

The high-speed rectifier performs the following functions:

- The coil is first supplied with a voltage $U_2 = 0.9 \times U_1$: Over-excitation of the brake
- After excitation time t_1 the voltage is reduced to $U_3 = 0.45 \times U_1$: Non-release voltage of the brake

Designation	Supply voltage (V AC)	Output voltage (V DC)		Ambient temperature
Article No.:	U_1 at 50/60 Hz	U_2	U_3	°C
PMG 480	215 ... 500	$0.9 \times U_1$	$0.45 \times U_1$	–15 ... +80

Overview (continued)

Maximum admissible speeds

The maximum admissible speeds from which emergency stops can be made are listed in the next table. These speeds should be considered as guide values and must be checked for the specific operating conditions.

The maximum admissible friction energy depends on the switching frequency and is shown for the individual brakes in the following diagram. Increased wear can be expected when the brakes are used for emergency stops.

Overview (continued)

1XP8 012 rotary pulse encoder

The rotary pulse encoder can be supplied already mounted in an HTL version as **1XP8 012-10** with order code **G01** or in a TTL version as **1XP8 012-20** with order code **G02**. In combination with the separately driven fan, rotary pulse encoders are supplied with a plug connector externally. The rotary pulse encoder can only be mounted on a standard non-drive end (NDE), i.e. a second shaft extension cannot be supplied.

The encoder can be retrofitted. The motor must be prepared for this. When the motor is ordered, the option "Prepared for mountings, center hole only" order code **G40** or the option "Prepared for mountings with shaft D12" order code **G41** must be specified (see "Mechanical version and degrees of protection" on page 1/79).

Attaching the rotary encoder increases the length of the motor by dimension Δl . For an explanation of the additional dimensions and weights, see "Special technology" "Dimensions and weights" from page 1/106. The rotary pulse encoders of "Modular technology" and "Special technology" are fitted as standard with a protective cover made of non-corrosive sheet steel.

Mounting of encoder for temperatures below -20 °C and higher than $+40\text{ °C}$ available on request.

Technical specifications of rotary pulse encoders	1XP8 012-10 (HTL version)	1XP8 012-20 (TTL version)
Supply voltage U_B	+10 V to +30 V	5 V $\pm 10\%$
Current input without load	150 mA	120 mA
Admissible load current per output	max. 100 mA	max. 20 mA
Pulses per revolution	1024	1024
Outputs	2 square-wave pulses A, B – 2 inverted square-wave pulses A, B Zero pulse and inverted zero pulse	
Pulse offset between the two outputs	90°	90°
Output amplitude	$U_{\text{High}} = U_B - 2.5\text{ V}$ $U_{\text{Low}} = 1.6\text{ V}$	$U_{\text{High}} > 2.5\text{ V}$ $U_{\text{Low}} < 0.5\text{ V}$

Maximum admissible axial force	40 N	40 N
Connection system	12-pin connector (mating connector is supplied)	
Certifications	CSA, UL	CSA, UL
Weight	0.3 kg	0.3 kg

Overview

"Special technology" comprises rotary pulse encoders of 1LE1 motors (with the exception of 1LE1 with order code **F90** – version "Forced-air cooled motors without external fan and fan cover" and 1PC1).

1LE1 motors with order codes **F70** (mounting of separately driven fan), **F01** (mounting of holding brake (standard arrangement)) and **F01 + F70** (mounting of brake and separately driven fan) from the modular mounting concept can be combined with rotary pulse encoders LL 861 900 220, HOG 9 DN 1024 I and HOG 10 D 1024 I from the "Special technology" range.

The length of the motor increases by Δl when the rotary pulse encoder is mounted. For an explanation of the additional dimensions and weights, please refer to "Mounting technology", "Dimensions and weights" from page 1/106.

The rotary pulse encoders of "Modular technology" and "Special technology" are fitted as standard with a protective cover made of non-corrosive sheet steel.

For mounting of rotary pulse encoders with order codes **G01** and **G02** for frame sizes 80 to 315, a protective cover is supplied as standard, with order codes **G04**, **G05**, and **G06** up to frame size 200.

LL 861 900 220 rotary pulse encoder

With its rugged construction, this rotary pulse encoder is also suitable for difficult operating environments. It is resistant to shock and vibration and has insulated bearings.

The LL 861 900 220 rotary pulse encoder can be supplied already mounted.

Order code **G04**

*The LL 861 900 220 rotary pulse encoder can be retrofitted. The motor must be prepared for this. When the motor is ordered, the option "Prepared for mountings, center hole only", order code **G40**, or the option "Prepared for mountings with shaft D16", order code **G42**, must be specified (see "Mechanical version and degrees of protection" on page 1/79). The rotary pulse encoder is not part of the scope of supply in this case.*

The version of the rotary pulse encoder with a diagnostics system (ADS) can be supplied by Leine and Linde.

Manufacturer:
Leine und Linde AG
Olivehällsvägen 8
SE-64542 Strängnäs
Phone +46 152 265 00
Fax +46 152 265 05

www.leinelinde.com
Email: info@leinelinde.se

For frame size 180 and above, a protective cover is not supplied as standard when rotary pulse encoders are mounted for order codes **G04**, **G05**, **G06**, **G07** and **G08**.

For mounting of rotary pulse encoders with order codes **G01**, **G02**, **G11**, **G12** + **F70** (mounting of separately driven fan): The cable end is connected to a connector that is located outside the fan cover. The fan cover does not have to be removed to connect the rotary pulse encoder. The rotary pulse encoder can be connected to the main terminal box or an auxiliary terminal box where necessary.

For mounting of rotary pulse encoders with order codes **G04**, **G05**, **G06** + **F70** (mounting of separately driven fan):

- Up to frame size 200, the fan cover has to be removed to connect the rotary pulse encoder. The rotary pulse encoder can also be connected to the main terminal box or an auxiliary terminal box where necessary.
- As of frame size 225, the fan cover does not have to be removed to connect the rotary pulse encoder. The rotary pulse encoder can be connected to the main terminal box and can be connected to the auxiliary terminal box where necessary.

Technical specifications for LL 861 900 220 (HTL version)

Mounting of encoder for temperatures below -20 °C and higher than $+40\text{ °C}$ available on request.

Supply voltage U_B	+9 V to +30 V
Current input without load	max. 80 mA
Admissible load current per output	40 mA
Pulses per revolution	1024
Outputs	6 short-circuit proof square-wave pulses A, A', B, B', 0, 0'
Pulse offset between the two outputs	$90^\circ \pm 25^\circ$ el.
Output amplitude	$U_{\text{High}} > 20\text{ V}$ $U_{\text{Low}} < 2.5\text{ V}$
Mark space ratio	1:1 $\pm 10\%$
Edge steepness	50 V/ μs (without load)
Maximum frequency	100 kHz for 350 m cable
Maximum speed	4000 rpm
Temperature range	-20 to $+80\text{ °C}$
Degree of protection	IP65
Maximum adm. radial cantilever force	300 N
Maximum adm. axial force	100 N
Connection system	Terminal strips in encoder cable connection M20 $\times$ 1.5 radial
Weight	approx. 1.3 kg

Mounting dimensions of POG 10 rotary pulse encoder

Technical specifications for POG 10

Mounting of encoder for temperatures below -20 °C and higher than $+40\text{ °C}$ available on request.

Supply voltage U_B	+9 V to +30 V	
Current input without load	< 100 mA	
Admissible load current per output	60 mA average 300 mA peak	25 mA average 75 mA peak
Pulses per revolution	300 ... 2500	
Mark space ratio	40:60 ... 60:40	
Operating speed	$\leq 12000\text{ rpm}$	
Switching rate	120 kHz	
Temperature range	$-40\text{ to }+100\text{ °C}$	
Degree of protection	IP66	
Maximum adm. radial cantilever force	$\leq 450\text{ N}$	
Maximum adm. axial force	$\leq 300\text{ N}$	
Connection system	Terminal box	
Weight	approx. 1.9 kg	

AGMA

Overview (continued)

HOG 10 D 1024 I rotary pulse encoder

This encoder is extremely rugged and is therefore suitable for difficult operating conditions. It is fitted with insulated bearings.

The HOG 10 D 1024 I rotary pulse encoder can be supplied already mounted.

Order code **G06**

*The HOG 10 D 1024 I rotary pulse encoder can be retrofitted. The motor must be prepared for this. When the motor is ordered, the option "Prepared for mountings, center hole only", order code **G40**, or the option "Prepared for mountings with shaft D16", order code **G42**, must be specified (see "Mechanical version and degrees of protection" on page 1/79). The rotary pulse encoder is not part of the scope of supply in this case. The letters FSL and ESL stand for the following terms:*

FSL: (mechanical) centrifugal switch

ESL: electronic speed switch

Both switch types are suitable for tripping the motor when a critical limit speed is reached, or for accelerating the motor along a control ramp into the permissible speed range again, or for shutting down the motor completely (depending on the customer application).

The electronic speed switch is particularly suitable for converter operation.

The critical limit rotational speed to be monitored for the customer's application must be specified in the order.

Further settings might also be necessary. These settings will be made at the Baumer & Hübner factory according to customer specifications.

Mounting dimensions of HOG 10 D 1024 I rotary pulse encoder

Technical specifications for HOG 10 D 1024 I (HTL version)

Mounting of encoder for temperatures below $-20\text{ }^{\circ}\text{C}$ and higher than $+40\text{ }^{\circ}\text{C}$ available on request.

Supply voltage U_B	+9 V to +30 V
Current input without load	approx. 100 mA
Admissible load current per output	600 mA, 300 mA peak
Pulses per revolution	1024
Outputs	4 short-circuit proof square-wave pulses A, B and A', B'
Pulse offset between the two outputs	$90^{\circ} \pm 20\%$
Output amplitude	$U_{\text{High}} \geq U_B - 3.5\text{ V}$ $U_{\text{Low}} \leq 1.5\text{ V}$
Mark space ratio	$1:1 \pm 20\%$
Edge steepness	10 V/ μs
Maximum frequency	120 kHz
Maximum speed	7000 rpm
Temperature range	-40 to $+100\text{ }^{\circ}\text{C}$
Degree of protection	IP66
Maximum adm. radial cantilever force	150 N
Maximum adm. axial force	80 N
Connection system	Terminals, cable connection M20 $\times$ 1.5
Mech. version acc. to Baumer Hübner Ident. No.	74 055 B
Weight	approx. 1.6 kg

Introduction

Mounting technology

Special technology

1

Overview (continued)

Sendix 5020 rotary pulse encoder

The Sendix 5020 rotary pulse encoder can be ordered completely assembled as an HTL version with order code **G11** or as a TTL version with order code **G12**.

Features of the **G11** and **G12** encoders:

- Use of insulation to avoid surge currents
- Safety-lock technology for high resistance to vibrations, shaft loads, and installation errors
- Cable lengths available up to 300 m

In combination with a separately driven fan, the rotary pulse encoders are supplied with an external plug connection. The rotary pulse encoder can only be attached to a standard NDE shaft extension, meaning that a second shaft extension will not be available.

*The encoder can be retrofitted. When the motor is ordered, the option "Prepared for mountings, center hole only" order code **G40** or the option "Prepared for mountings with D12 shaft" order code **G41** must be specified.*

The dimensions of the motor are increased by ΔI by mounting the rotary pulse encoder. The "Modular technology" and "Special technology" rotary pulse encoders are fitted with a protective cover made from corrosion-resistant sheet metal as standard. Mounted encoders for temperatures below $-20\text{ }^{\circ}\text{C}$ and above $+40\text{ }^{\circ}\text{C}$ are available on request.

Technical specifications for Sendix 5020 (HTL/TTL version)

	Sendix 5020 (HTL version)	Sendix 5020 (TTL version)
Supply voltage	10 ... 30 V DC	5 V DC $\pm 5\%$
Energy consumption with inverted signal (no-load operation)	max. 100 mA	max. 90 mA
Admissible load/channel	max. $\pm 40\text{ mA}$	max. $\pm 20\text{ mA}$
Pulses per revolution	1024 (2048; 512)	
Outputs	2 square-wave pulses A, B – 2 inverted square-wave pulses A, B	
Pulse offset between the two outputs	90°	
Signal level	$U_{\text{High}} = \text{min. } U_{\text{B}} - 1\text{ V}$ $U_{\text{High}} = \text{min. } 2.5\text{ V}$ $U_{\text{Low}} = \text{max. } 0.5\text{ V}$	
Edge rise time t_r	max. 1 μs	max. 200 μs
Edge fall time t_f	max. 1 μs	max. 200 μs
Pulse frequency	max. 300 kHz	
Maximum speed	12000 rpm/6000 rpm (continuous)	
Working temperature range	$-40\text{ }^{\circ}\text{C}$... $+100\text{ }^{\circ}\text{C}$	
Degree of protection acc. to EN 60529	IP65	
Maximum admissible radial cantilever force	100 N	
Maximum admissible axial force	50 N	
Connection system	12-pin M23 connector (mating connectors are always supplied)	
Certificates	UL, CSA (ATEX on request)	
Weight	0.4 kg	
Explosion protection certificate for explosive areas	Available on request for Zones 2 and 22	
Shock resistance acc. to EN 60068-2-27	3000 m/s ² , 6 ms	
Vibration resistance acc. to EN 60068-2-6	300 m/s ² , 10 ... 2000 Hz

¹⁾ With connector: $-40\text{ }^{\circ}\text{C}$, permanently installed cable: $-30\text{ }^{\circ}\text{C}$, moving cable: $-20\text{ }^{\circ}\text{C}$.

Overview (continued)**Backstop, counterclockwise/clockwise motion blocked**

The backstop (order code F40/F41) prevents the motor from moving while in de-energized state against its direction of rotation in the energized state.

The backstop is only available for SIMOTICS SD – 1LE15/1LE16, VSD10, VSD4000 motors.

- Counterclockwise motion blocked: Option **F40**
- Clockwise motion blocked: Option **F41**

Orientation

SIMOTICS GP/SD 1LE1/1PC1 standard motors

Overview

2

Increasing energy costs have resulted in greater emphasis on the power consumption of drive systems. It is extremely important to utilize the full potential for minimizing energy consumption here to secure competitiveness today and in the future. The environment will also profit from reduced energy consumption.

This is the reason that already today we are developing a new generation of low-voltage motors. Innovative rotors create the best requisites for motors with a high degree of efficiency. IE1 and IE2 motors with the same power have the same dimensions. The new motors for IE2, IE3 and IE4 offer considerable energy savings and protect our environment. We also consider environmental compatibility and sustainable use of resources during production. Potting compounds and coatings are, for example, solvent-free.

The modular mounting concept provides total flexibility. Each motor is based on a uniform concept for all markets worldwide. Our motors are manufactured according to the most advanced ecological standards.

The new 1LE1 motor family is therefore one of the most compact in the world, because it is manufactured using innovative technology. For an optimized design, a compound of highly conductive materials is used in the rotor (up to frame size 200). This results in minimum rotor losses and an excellent starting and switching response.

The design of the 1LE1 motors ensures maximum flexibility and minimum installation costs. Users benefit from integral lifting eyes, screw-on feet, reinforced bearing plates with optimum mechanical properties and easily accessible terminal boxes. Encoders, brakes and separately driven fans can also be added without any problems. Smaller inventories make stockkeeping easier, so motor suppliers can respond to customer requirements more quickly.

The 1LE1/1PC1 motor family comprises two main series:

- SIMOTICS GP for general purpose applications:
Motors with an aluminum housing

SIMOTICS GP 1LE1/1PC1 motors with an aluminum housing are suitable for a wide range of standard drive tasks in the industrial environment. Thanks to their particular low weight, they are predestined for applications in pumps, fans and compressors. But they also reliably fulfill their tasks in conveyor systems and lifting gear.

Brief overview

Power and voltage range:	0.09 ... 45 kW for all commonly used voltages
Frame sizes and types of construction:	63 ... 200 in all common types of construction
Rated speed:	750 ... 3600 rpm
Number of poles:	2, 4, 6, 8
Efficiency classes:	• IE1 (Standard Efficiency) • IE2 (High Efficiency) • IE3 (Premium Efficiency) • IE4 (Super Premium Efficiency) • NEE (NEMA Energy Efficient, acc. to NEMA MG, Table 12-11) • NPE (NEMA Premium Efficient, acc. to NEMA MG, Table 12-12)

- SIMOTICS SD for severe duty applications:
Motors with cast-iron housing

SIMOTICS SD 1LE1 motors with a cast-iron housing are extremely rugged and are therefore the first choice for applications under harsh environmental conditions. They master dust or vibration in mills and mixers as well as the corrosive atmosphere in the petrochemical industry.

Brief overview

Power and voltage range:	0.09 ... 200 kW for all commonly used voltages
Frame sizes and types of construction:	71 ... 315 in all common types of construction
Rated speed:	750 ... 3600 rpm
Number of poles:	2, 4, 6, 8
Efficiency classes:	• IE1 (Standard Efficiency) • IE2 (High Efficiency) • IE3 (Premium Efficiency) • IE4 (Super Premium Efficiency) • NEE (NEMA Energy Efficient, acc. to NEMA MG, Table 12-11) • NPE (NEMA Premium Efficient, acc. to NEMA MG, Table 12-12)

Overview (continued)**High efficiency energy-saving motors for a positive energy balance**

Depending on requirements, energy-saving motors for a positive energy balance are available that are compliant with the legal requirements applicable in the European economic area in accordance with EU Directive 640/2009 as well as for the North American market in accordance with US federal law EISA (Energy Independence Security Act).

Motors with increased power and compact construction (1LE1)

Motors with increased power and compact construction can be used to advantage in confined spaces. For a slightly longer overall length, the power is at least as high as that of the next largest frame size. These compact motors are also optimized for efficiency. They are offered in IE2 and IE3 and therefore reduce operating costs.

Motors without fan cover and without external fan (1LE1 with order code F90)

Forced-air cooled motors with surface cooling without fan cover and without external fan are mainly used for driving fans.

Motors with reduced power without fan cover and without external fan (1PC1 motors on request)

Naturally cooled motors with surface cooling without fan cover and without external fan are suitable for the following operating conditions:

- Types of duty with adequate cooling times (e.g. temporary duty for positioning drives)
- Environmental conditions that demand compact installation space (e.g. in motors with a stopping function)

Requirements that make an external fan disadvantageous, e.g. simple cleaning in the food industry, textile industry.

Preferred motors

The most popular basic versions of motor series 1LE1 are available under special terms as so-called "Preferred motors".

The complete range is covered by Price List D 81.1 P Part 1 "Preferred motors". The price list also contains further information regarding the new delivery concept.

Benefits

There is considerable potential in the new 1LE1/1PC1 series of low-voltage motors. As a consistent further development of existing motors, the 1LE1/1PC1 motors offer numerous advantages.

Greater efficiency

Innovative rotor technology and manufacturing technology has been implemented for the IE3 and IE4 high efficiency motor variants.

The energy-efficient motors are therefore considerably more compact.

The SinaSave Webtool can be used to calculate the energy saving potential and life cycle costs of all motors. SinaSave can be downloaded free of charge from the following website:

www.siemens.com/sinasave

The 1LE1 motors also impress customers with their extremely long life and their weight-optimized design has a positive effect on the stability of the equipment unit.

A wider range of applications

The motors are certified for worldwide use and satisfy high standards of quality (confirmed, for example, by CSA ¹⁾, UL ²⁾, CQC ³⁾).

Improved design

The rugged housing in modern EMC design has an attractive appearance and enhances functionality. The rotatable, accessible terminal boxes, integral lifting eyes, screw-on feet and reinforced bearing plates ensure this.

Greater power

For the same frame size, the high-performance motors offer one complete rated power level more. We are also consistently implementing energy efficiency improvements here, too. The motors are offered (based on the categories of IEC 60034-30-1) in various efficiency classes.

More flexibility

The optimized design of the motors makes installation easier in general. Encoders, brakes and separately driven fans can be retrofitted easily. Terminal boxes and feet for flexible mounting can be selected. Smaller inventories make stockkeeping easier and motor suppliers can respond to customer requirements more quickly. Optimized manufacturing processes support fast availability. All motors up to 480 V can be operated either directly on the line or on a converter.

For general purpose applications: SIMOTICS GP motors with an aluminum housing**Particularly user friendly**

The previously introduced, well-proven, obliquely partitioned terminal box is being implemented consistently throughout the entire motor series.

Special export line

For exporting to NAFTA, the Eagle Line is available. The motors are supplied with the electrical values stamped on the rating plate in accordance with EISA requirements.

¹⁾ Canadian Standard Association

²⁾ Underwriters Laboratories Inc.

³⁾ China Quality Certification

Orientation

SIMOTICS GP/SD 1LE1/1PC1 standard motors

Benefits (continued)

For severe duty applications: SIMOTICS SD motors with a cast-iron housing

The right motor for various challenges

The following lines are available for severe duty applications:

- **Basic Line (1LE15):** rugged, reliable motors for machine construction
- **Performance Line (1LE16):** Motors for the process industry with reinforced bearings and a more rugged coating – for requirements that extend beyond the Basic Line
- **"Eagle Line":** Motors for exporting to the NAFTA zone; they fulfill the requirements of UL and CSA and are supplied with the electrical values stamped on the rating plate in accordance with EISA requirements

Comparison: Basic Line versus Performance Line

Function	Basic Line	Performance Line
Bearing size	62 (63 from frame size 280 upwards)	63
Relubrication	Optional (standard from frame size 280 upwards)	Standard from frame size 160 upwards (optional for frame size 100 to 132)
Paint system	Standard paint finish, corrosivity category C2 ¹⁾	Special paint finish, corrosivity category C3 ¹⁾
Drainage	Drain plugs	T drains
Rating plate	Aluminum, plastic	Steel
Motor protection	Optional	PTC
Fan cover	Plastic	Steel
Warranty	12 months	36 months

Compact design

The size of a motor is often an important aspect in the case of machines. For this reason, the 1LE1 motors in IE2 and IE3 are not any longer than their predecessors in the 1LG series in IE2.

Another highlight: some of the IE3 motors fit in the same housing as the IE2 motors. The efficiency classes naturally do not differ with regard to shaft height, so that the mechanical interface to the equipment unit remains the same. This also supports a largely problem-free efficiency upgrade to IE3 – without the need to adapt the mechanical design of a machine.

Greater power

In severe duty applications, motors with increased power can also be the right solution if sufficient space is not available for a standard motor. Because these motors offer the same power rating in the next smallest frame size.

Application

As soon as the range of motors and options is complete, it will be possible to use the 1LE1/1PC1 motors from Siemens in all areas and sectors of industry due to their numerous options. They are suitable both for special environmental conditions such as those that predominate in the chemical or petrochemical industry as well as for most climatic requirements such as those of offshore applications.

Their large range of line voltages enables them to be used all over the world.

The wide field of implementation includes the following applications:

- Pumps
- Fans
- Compressors
- Conveyor systems such as cranes, belts and lifting gear
- High-bay warehouses
- Packaging machines
- Automation and drives
- Manufacturing industry
- General machine construction

Motors with a cast-iron housing are particularly suitable for the following severe duty applications:

- Petrochemical industry
- Pharmaceuticals
- Chemical industry
- Printing industry
- Process industry

¹⁾ See also Chapter 1, pages 1/21 and 1/22.

Technical specifications

Overview of technical specifications

This table lists the most important technical specifications. For more information and details, see Catalog Section 1 "Introduction".

Type of motor	SIMOTICS GP/SD 1LE1/1PC1 IEC Low-Voltage Motors
Connection types	Star/delta connection The connection type to be used can be established from the Article No. supplements for the required motor.
Number of poles	2, 4, 6, 8
Frame sizes	63 M ... 315 L
Rated power	0.09 ... 200 kW (1LE1 motor series)/0.3 ... 9 kW (1PC1 motor series)
Frequencies	50 Hz and 60 Hz
Versions	Self-ventilated 1LE1 energy-saving motors with: • IE1 (Standard Efficiency) • IE2 (High Efficiency) • IE3 (Premium Efficiency) • IE4 (Super Premium Efficiency) • NEE (NEMA Energy Efficient, acc. to NEMA MG, Table 12-11) • NPE (NEMA Premium Efficient, acc. to NEMA MG, Table 12-12) Self-ventilated 1LE1 motors with increased power and: • IE1 (Standard Efficiency) • IE2 (High Efficiency) • IE3 (Premium Efficiency) Forced-air cooled 1LE1 motors without external fan and fan cover with: • IE1 (Standard Efficiency) • IE2 (High Efficiency) • IE3 (Premium Efficiency) • IE4 (Super Premium Efficiency) Naturally cooled 1PC1 motors without external fan and fan cover with: • IE1 (Standard Efficiency) • IE2 (High Efficiency) • IE3 (Premium Efficiency) • IE4 (Super Premium Efficiency)
Marking	IEC 60034-30-1 IE1, IE2, IE3, IE4: 2, 4, 6, and 8-pole US Energy Independence Security Act EISA: 2, 4, 6 and 8-pole
Rated speed (synchronous speed)	750 ... 3000 rpm
Rated torque	0.6 ... 1703 Nm (1LE1 motor series)
Insulation of the stator winding in accordance with EN 60034-1 (IEC 60034-1)	Temperature class 155 (F), utilized acc. to temperature class 130 (B) (also for motors with increased power) DURIGNIT IR 2000 insulation system
Degree of protection according to EN 60034-5 (IEC 60034-5)	IP55 as standard
Cooling according to EN 60034-6 (IEC 60034-6)	• Self-ventilated (IC 411) (1LE1 motor series) frame size 80 M to 315 L • Forced-air cooled (IC 418) (1LE1 motor series with order code F90), frame size 80 M to 200 L • Naturally cooled (IC 410) (1PC1 motor series) frame size 100 L to 160 L
Permissible coolant temperature and installation altitude	–20 ... +40 °C as standard, installation altitude up to 1000 m above sea level. See "Coolant temperature and installation altitude" in Catalog Section 1 "Introduction".
Standard voltages according to EN 60038 (IEC 60038)	50 Hz: 230 V, 400 V, 500 V, 690 V The voltage to be used can be found in the "Selection and ordering data" for the required motor.
Type of construction according to EN 60034-7 (IEC 60034-7)	• Without flange: IM B3, IM B6, IM B7, IM B8, IM V5 without protective cover, IM V6, IM V5 with protective cover • With flange: IM B5, IM V1, IM V3, IM B35 • With flange and special flange (next largest flange): IM B14, IM V19, IM V18, IM B34
Paint finish	Standard: Color RAL 7030 stone gray
Suitability of paint finish for climate group according to IEC 60721, Part 2-1	See "Paint finish" in Catalog Section 1 "Introduction".
Vibration severity grade according to EN 60034-14 (IEC 60034-14)	Grade A (normal – without special vibration requirements) Optionally: Grade B (with special vibration requirements) See "Balance and vibration severity" in Catalog Section 1 "Introduction".
Shaft extension according to DIN 748 (IEC 60072)	Balancing type: half-key balancing as standard See "Balance and vibration severity" in Catalog Section 1 "Introduction".
Sound pressure level according to EN ISO 1680 (tolerance +3 dB)	The sound pressure level is listed in the selection and ordering data for the required motor.
Weights	The weight is listed in the selection and ordering data for the required motor.
Modular mounting concept	Rotary pulse encoder, brake, separately driven fan or prepared for mountings
Consistent series concept	• Cast housing feet, screwed-on feet available as an option and retrofittable • Terminal box obliquely partitioned and rotatable through 4 × 90° • Bearings at DE and NDE are of identical design, reinforced bearings available as an option
Options	See "Article No. supplements and special versions"

More information

For further information, please get in touch with your local Siemens contact and use the DT Configurator.

Contacts: www.siemens.com/automation/partner

DT Configurator: www.siemens.com/dt-configurator

You can find out about certain technologies through Siemens contact partners worldwide.

Wherever possible, you will find a local contact for:

- Technical support
- Spare parts/repairs
- Service
- Training

- Marketing & Sales
- Technical consultation/engineering

You start by selecting a:

- country
- product or
- sector.

By further specifying the remaining criteria you will find exactly the right contact partner with his/her respective expertise.

Orientation

SIMOTICS GP/SD 1LE1/1PC1 standard motors

Converter operation

Overview

Converter operation up to 500 V +10 % line voltage

See Chapter 1, page 1/32.

During installation, the EMC guidelines must be complied with

Note:

When motors are operated on SINAMICS converters additional losses occur which, depending on the admissible winding temperature, can make it necessary to reduce the torque. The admissible torque values can be obtained from the SIZER configuring tool. The lowest frequency specified there is 5 Hz. For stationary converter operation at lower frequencies, particularly in the case of frame sizes < 100, it is necessary to inquire at the Quotation Center.

Benefits

Motors operating with frequency converters offer the user numerous advantages.

The motors feature the future-oriented insulation system DURIGNIT IR 2000 (IR = Inverter Resistant). The DURIGNIT IR 2000 insulation system consists of high-quality enamel wires and insulating sheet materials in conjunction with temperature-resistant resin impregnation.

Application

The wide field of implementation includes the following applications:

- Conveyor systems such as cranes, belts and lifting gear
- High-bay warehouses
- Packaging machines
- Automation and drives

Their large range of line voltages enables them to be used all over the world.

Technical specifications

General note

All the data listed in the catalog is applicable for a 50 Hz line supply. With converter operation, the torque reduction factors for constant torque and drives for fans, pumps and compressors must be configured using the "SIZER for Siemens Drives" engineering tool. Higher noise levels must be expected at frequencies other than 50 Hz for motors operating with converters due to the harmonic content of the supply.

Mechanical limit speeds

When the motor is operated above its rated frequency, it is important to note that the maximum speeds are limited by the limits for the roller bearings, critical rotor speed and rigidity of the rotating parts (see page 1/60).

Motor protection

A motor protection function can be implemented using the I^2t sensing capability implemented in the converter software.

If required, more precise motor protection can be afforded by direct temperature measurement using KTY84 sensors, PTC thermistors, or Pt1000 resistance thermometers in the motor winding. Some converters from Siemens determine the motor temperature using the resistance of the temperature sensor. They can be set to a required temperature for alarm and tripping.

Insulation

The insulation of 1LE motors is designed such that converter operation is possible at voltages up to 500 V¹⁾.
 $\hat{U}_{\text{phase-to-phase}} \leq 1500 \text{ V}$, $\hat{U}_{\text{phase-to-ground}} \leq 1100 \text{ V}$,
 voltage rise times of $t_s > 0.1 \mu\text{s}$.

All motors with voltage codes 22 and 34 must be operated on a converter under these conditions. For converter operation with the power ratings specified in the catalog, the motors are used according to temperature class 155 (F), i.e. in this case neither a service factor > 1 nor an increased coolant temperature is possible (order codes N01, N02 and N03 cannot be ordered).

¹⁾ See also IEC 60034-1 Edition 13.0

Selection and ordering data

The article number consists of a combination of digits and letters and is divided into three hyphenated blocks to provide a better overview, e.g.:

**1LE1001-1DB22-2CB5-Z
H00**

The first block (positions 1 to 7) identifies the motor type. The second block (positions 8 to 12) defines the motor frame size and length, the number of poles and in some cases the frequency/voltage. In the third block (positions 13 to 16), the frequency/voltage, type of construction and further design features are encoded.

For deviations in the second and third block from the catalog codes either **Z** or **90** should be used as appropriate.

Ordering data:

- Complete Article No. and order code(s) or plain text
- If a quotation has been requested, please specify the quotation number in addition to the Article No.
- When ordering a complete motor as a spare part, please specify the works serial No. for the previously supplied motor as well as the Article No.

Structure of the Article No.:		Position:	1	2	3	4	5	6	7	-	8	9	10	11	12	-	13	14	15	16
1st to 4th position: Digit, letter, letter, digit	• Self-ventilated by fan mounted on and driven by the rotor • Forced-air cooled by air flow from the fan to be driven with option extension F90 • Naturally cooled without external fan and fan cover		1	L	E	1

Note: IE4 motors (2-pole) in frame size 315 do not comply with the vibration values stipulated in IEC 60034-14 when rigidly installed (see also page 1/56).

¹⁾ Operating values at rated power for 60 Hz are stored in the Drive Technology Configurator (DT Configurator; see Appendix, "Tools and engineering").

²⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Operating values at rated power for 60 Hz are stored in the Drive Technology Configurator (DT Configurator; see Appendix, "Tools and engineering").

²⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

⁴⁾ As 315 M version (not the same as 315 S according to EN 50347).

¹⁾ Operating values at rated power for 60 Hz are stored in the Drive Technology Configurator (DT Configurator; see Appendix, "Tools and engineering").

²⁾ For converter operation of shaft heights 80 and 90, ordering with PTC thermistors and their connection to the converter is recommended.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6, and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirements exist for condensation drainage holes (**H03**) or stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. For orders with condensation drainage holes (**H03**), the type must be specified.

¹⁾ Operating values at rated power for 60 Hz are stored in the Drive Technology Configurator (DT Configurator; see Appendix, "Tools and engineering").

²⁾ Types derived from IM B3 (IM B6/7/8, IM V6, and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirements exist for condensation drainage holes (**H03**) or stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. For orders with condensation drainage holes (**H03**), the type must be specified.

¹⁾ Operating values at rated power for 60 Hz are stored in the Drive Technology Configurator (DT Configurator; see Appendix, "Tools and engineering").

²⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Operating values at rated power for 60 Hz are stored in the Drive Technology Configurator (DT Configurator; see Appendix, "Tools and engineering").

²⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code R52) or a larger terminal box (order code R50) can be used. Order codes R52 and R50 alter the motor dimensions.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Operating values at rated power for 60 Hz are stored in the Drive Technology Configurator (DT Configurator; see Appendix, "Tools and engineering").

²⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Operating values at rated power for 60 Hz are stored in the Drive Technology Configurator (DT Configurator; see Appendix, "Tools and engineering").

²⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Operating values at rated power for 60 Hz are stored in the Drive Technology Configurator (DT Configurator; see Appendix, "Tools and engineering").

²⁾ For converter operation of shaft heights 63 and 90, ordering with PTC thermistors and their connection to the converter is recommended.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6, and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirements exist for condensation drainage holes (H03) or stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. For orders with condensation drainage holes (H03), the type must be specified.

¹⁾ Operating values at rated power for 60 Hz are stored in the Drive Technology Configurator (DT Configurator; see Appendix, "Tools and engineering").

²⁾ For converter operation of shaft heights 63 and 90, ordering with PTC thermistors and their connection to the converter is recommended.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6, and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirements exist for condensation drainage holes (H03) or stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. For orders with condensation drainage holes (H03), the type must be specified.

AGMA

¹⁾ Operating values at rated power for 60 Hz are stored in the Drive Technology Configurator (DT Configurator; see Appendix, "Tools and engineering").

²⁾ Types derived from IM B3 (IM B6/7/8, IM V6, and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirements exist for condensation drainage holes (**H03**) or stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. For orders with condensation drainage holes (**H03**), the type must be specified.

¹⁾ Operating values at rated power for 60 Hz are stored in the Drive Technology Configurator (DT Configurator; see Appendix, "Tools and engineering").

²⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Operating values at rated power for 60 Hz are stored in the Drive Technology Configurator (DT Configurator; see Appendix, "Tools and engineering").

²⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Operating values at rated power for 60 Hz are stored in the Drive Technology Configurator (DT Configurator; see Appendix, "Tools and engineering").

²⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

⁴⁾ No IE class for 50 and 60 Hz because the motor is outside the validity for the efficiency classes according to IEC 60034-30-1:2014.

¹⁾ Operating values at rated power for 60 Hz are stored in the Drive Technology Configurator (DT Configurator; see Appendix, "Tools and engineering").

²⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Operating values at rated power for 60 Hz are stored in the Drive Technology Configurator (DT Configurator; see Appendix, "Tools and engineering").

²⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

⁴⁾ No IE class for 50 and 60 Hz because the motor is outside the validity for the efficiency classes according to IEC 60034-30-1:2014.

¹⁾ Operating values at rated power for 60 Hz are stored in the Drive Technology Configurator (DT Configurator; see Appendix, "Tools and engineering").

²⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Operating values at rated power for 60 Hz are stored in the Drive Technology Configurator (DT Configurator; see Appendix, "Tools and engineering").

²⁾ Types derived from IM B3 (IM B6/7/8, IM V6, and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirements exist for condensation drainage holes (H03) or stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. For orders with condensation drainage holes (H03), the type must be specified.

¹⁾ Operating values at rated power for 60 Hz are stored in the Drive Technology Configurator (DT Configurator; see Appendix, "Tools and engineering").

²⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Operating values at rated power for 60 Hz are stored in the Drive Technology Configurator (DT Configurator; see Appendix, "Tools and engineering").

²⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

⁴⁾ The noise limit values specified as permissible in IEC 60034-9 under load can be exceeded.

¹⁾ Types derived from IM B3 (IM B6/7/8, IM V6, and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirements exist for condensation drainage holes (H03) or stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. For orders with condensation drainage holes (H03), the type must be specified.

For options, see from page 2/109															1LE1643-		-Z	...+...+...+...		

¹⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Types derived from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B5 or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

AGMA

¹⁾ Types of construction with feet are not possible for 2-pole, 4-pole and 6-pole motors ≤ 200 hp in accordance with MG1 Table 12-11.

²⁾ Types derived from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B5 or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Operating voltages only ≤ 600 V admissible in accordance with MG1 Table 12-12.

²⁾ Types derived from IM B3 (IM B6/7/8, IM V6, and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible,

provided that no requirements exist for condensation drainage holes (H03) or stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. For orders with condensation drainage holes (H03), the type must be specified.

- Not required
 ✓ Available

¹⁾ Operating voltages only ≤ 600 V admissible in accordance with MG1 Table 12-12.
 Parallel supply lines are required in the case of connection to ≤ 240 V.
 For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

²⁾ Types derived from IM B3 (IM B6/7/8, IM V6, and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Operating voltages only ≤ 600 V admissible in accordance with MG1 Table 12-12.
Parallel supply lines are required in the case of connection to ≤ 240 V.
For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

²⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Operating voltages only ≤ 600 V admissible in accordance with MG1 Table 12-12.
Parallel supply lines are required in the case of connection to ≤ 240 V.
For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

²⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Operating voltages only ≤ 600 V admissible in accordance with MG1 Table 12-11.
Parallel supply lines are required in the case of connection to ≤ 240 V.
For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

²⁾ Types of construction with feet are not possible for 2-pole, 4-pole and 6-pole motors ≤ 200 hp in accordance with MG1 Table 12-11.

³⁾ Types derived from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B5 or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

Note: Pole-changing motors (4/2-pole) do not comply with the vibration values stipulated in IEC 60034-14 when rigidly installed (see also page 1/56).

¹⁾ Operating values for 60 Hz are available on request.

²⁾ Types derived from IM B3 (IM B6/7/8, IM V6, and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirements exist for condensation drainage holes (H03) or stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. For orders with condensation drainage holes (H03), the type must be specified.

¹⁾ For North America export versions Eagle Line 1LE1521 NEMA Energy Efficient and 1LE1523/1LE1623 NEMA Premium Efficient, voltages above 600 V will not be stamped.

²⁾ Not admissible for North America export versions Eagle Line 1LE1521 NEMA Energy Efficient and 1LE1523/1LE1623 NEMA Premium Efficient.

³⁾ Delta connection is not possible.

⁴⁾ Star connection is not possible.

⁵⁾ Only possible for 4-pole, 6-pole and 8-pole motors. The operating data for converter operation is also provided in a table on the rating plate.

⁶⁾ Plain text must be specified in the order: Voltage between 200 and 690 V (voltages outside this range are available on request), frequency, circuit, for 60 Hz additionally required rated power in kW.

Not possible

O.R.

Possible on request

- 1) The types of construction IM B6/7/8, IM V6, and IM V5 with/without protective cover are also possible as long as there are no condensation drainage holes (order code **H03**) and these types of construction do not have to be stamped on the rating plate. As standard the type of construction IM B3 is then stamped on the rating plate. With type of construction IM V5 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.
- 2) The type of construction is stamped on the rating plate. For orders with condensation drainage holes (order code **H03**), if mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.
- 3) For North America export version Eagle Line 1LE1021 NEMA Energy Efficient, types of construction with feet are not possible for 2-pole, 4-pole and 6-pole motors ≤ 200 hp in accordance with NEMA MG1 Table 12-11.
- 4) The "Standard cylindrical shaft extension (second shaft extension)" option (order code **L05**) is not possible.
- 5) In combination with an encoder, it is not necessary to order the protective cover (order code **H00**), as this is delivered as a protection for the encoder as standard. In this case the protective cover is standard version (without additional charge).
- 6) Not possible for forced-air cooled 1LE1 motors with order code **F90** without external fan and fan cover.
- 7) The types of construction IM V3 and IM V1 with/without protective cover are also possible as long as there are no condensation drainage holes (order code **H03**) and these types of construction do not have to be stamped on the rating plate. As standard the type of construction IM B5 is then stamped on the rating plate. With type of construction IM V1 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.
- 8) The types of construction IM V19 and IM V18 with/without protective cover are also possible as long as there are no condensation drainage holes (order code **H03**) and these types of construction do not have to be stamped on the rating plate. As standard the type of construction IM B14 is then stamped on the rating plate. With type of construction IM V18 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.
- 9) When ordering frame size B7 and the required cable outlet below, option **R12** must also be ordered.
- 10) For the standard EN 50347, flanges which are 2 levels larger are used in frame size 80 with option **P01**.

- The types of construction IM B6/7/8, IM V6 and IM V5 with/without protective cover are also possible as long as no stamping of these types of construction on the rating plate is required. As standard the type of construction IM B3 is then stamped on the rating plate. With type of construction IM V5 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.
- The type of construction is stamped on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.
- For North America export version Eagle Line 1LE1521 NEMA Energy Efficient, types of construction with feet are not possible for 2-pole, 4-pole and 6-pole motors ≤ 200 hp in accordance with NEMA MG1 Table 12-11.
- In combination with an encoder, it is not necessary to order the protective cover (order code **H00**), as this is delivered as a protection for the encoder as standard. In this case the protective cover is standard design (without additional charge).
- The "Standard cylindrical shaft extension (second shaft extension)" option (order code **L05**) is not possible.
- The types of construction IM V3 and IM V1 with/without protective cover are also possible as long as no stamping of these types of construction on the rating plate is required. As standard the type of construction IM B5 is then stamped on the rating plate. With type of construction IM V1 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.
- The types of construction IM V19 and IM V18 with/without protective cover are also possible as long as no stamping of these types of construction on the rating plate is required. As standard the type of construction IM B14 is then stamped on the rating plate. With type of construction IM V18 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.
- With reference to standard EN 50347, flanges that are 2 levels larger are used with option **P01** in the frame sizes 71 and 80.
- When ordering frame size B7 and the required cable outlet below, option **R12** must also be ordered.

Note:

Options are available specifically for bearing protection – for order codes and descriptions, see from page 2/109.

¹⁾ For the Performance Line, motor protection by means of PTC thermistors with 3 built-in temperature sensors for tripping (motor protection code letter B) is already included in the basic price. For the Performance Line, the option "without motor protection" (motor protection code letter A) is not possible.

²⁾ Evaluation with appropriate tripping unit (see Catalog IC 10) is recommended.

³⁾ Not UL certified. Not in combination with option D31.

SIMOTICS GP 1LE1 standard motors

Options · Aluminum series 1LE10

- Standard version
- Without additional charge
- This order code only determines the price of the version – Additional plain text is required.
- ✓ With additional charge
- O. R. Possible on request
- Av. soon Available soon
- Not possible

2

- 1) With IM B5 flange, only possible in combination with **H08**.
- 2) Not possible in combination with order code **R15** "One metal cable gland".
- 3) With **H08**, feet dimensions C and CA differ from EN 50347! Further information is available in the DT Configurator (see Appendix, "Tools and engineering").
- 4) In conjunction with motor protection (15th position of the Article No.) or anti-condensation heating option, please inquire before ordering.
- 5) Not possible in combination with voltage code **22** or **34**.
- 6) Cannot be used for motors in UL version (order code **D31**). The grease lifetime specified in Catalog Section 1 "Introduction" refers to CT 40 °C. If the coolant temperature is increased by 10 K, the grease lifetime and regreasing interval are halved.
- 7) A second shaft extension is not possible. Please inquire for mounted brakes.
- 8) For order codes **F10**, **F11**, and **F12**, the brake supply voltage must be specified or ordered.
- 9) All encoders are supplied with a protective cover as standard. The protective cover is omitted at the factory when a rotary pulse encoder is combined with a separately driven fan, because in this case the rotary pulse encoder is installed under the fan cover. In combination with a separately driven fan (order code **F70**) the 1XP8032-10 rotary pulse encoder is used instead of 1XP8012-10 or 1XP8032-20 is used instead of 1XP8012-20.
- 10) As standard, motors that are prepared for additional mountings (order codes **G40**, **G41**, **G42**) are shipped without protective cover. If a protective cover is requested as a cover or mechanical protection for mountings provided by the customer, this can be ordered with order code **G43**. Not possible in combination with order code **L00** vibration severity grade B. In combination with a separately driven fan (order code **F70**) the 1XP8032-10 rotary pulse encoder is used instead of 1XP8012-10 or 1XP8032-20 is used instead of 1XP8012-20.
- 11) Order code **H00** provides mechanical protection for encoders.
- 12) Not possible in combination with 2LM8 brake – order code **F01**.
- 13) Not possible in combination with HOG 9 DN 1024 I rotary pulse encoder (order code **G05**) and/or brake 2LM8 (order code **F01**).
- 14) Supplied with the condensation drainage holes sealed at the drive end DE and non-drive end NDE (IP55, IP56, IP65). If the condensation drainage holes are required for motors of the IM B6, IM B7, or IM B8 type of construction (feet on side or top), the motors must be ordered in the respective type of construction and with order code **H03**, so that the condensation drainage holes will be placed in the correct position.
- 15) As standard, motors that are prepared for additional mountings (order codes **G40**, **G41**, **G42**) are shipped without protective cover. If a protective cover is requested as a cover or mechanical protection for mountings provided by the customer, this can be ordered with order code **G43**. Not possible in combination with order code **L00** vibration severity grade B.
- 16) In connection with mountings, the respective technical specifications must be observed, please inquire before ordering.
- 17) CCC mandatory certification, see Chapter 1 Page 1/27.
- 18) Possible up to 600 V max. The rated voltage is indicated on the rating plate without voltage range. Order codes **D30** and **D31** do not authorize importing into USA and Mexico. The North America export versions Eagle Line 1LE1021 NEMA Energy Efficient and 1LE1023 NEMA Premium Efficient are available for this purpose.
- 19) In connection with mountings, the respective technical specifications must be observed, please inquire before ordering.
- 20) Not possible when brake is mounted.
- 21) When motors are ordered that have a longer or shorter shaft extension than normal, the required position and length of the feather keyway must be specified in a sketch. It must be ensured that only feather keys in accordance with EN 50347, Form A are used. The feather keyway is positioned centrally on the shaft extension. The length is defined by the manufacturer in accordance with the appropriate standard. Not valid for: Conical shafts, non-standard threaded journals, non-standard shaft tolerances, friction welded journals, extremely "thin" shafts, special geometry dimensions (e.g. square journals), hollow shafts. Valid for non-standard shaft extensions DE or NDE. The feather key is always supplied. For order codes **Y58**, **Y59** and **L05** the following applies:
 - Dimensions D and DA ≤ ball bearing inner diameter (see dimension tables for "Dimensions")
 - Dimensions E and EA ≤ 2 × length E (standard) of the shaft extension.
- 22) The special requirements of the textile industry regarding the sheet metal cover open up the possibility that a finger may be inserted between the cover and housing. The customer must implement appropriate measures to ensure that the installed system is "finger-safe".
- 23) Converter operation is permitted for 1LE1 motors with metal external fans. The metal external fan is not possible in combination with the low-noise version – order code **F77** or **F78**.
- 24) Can be ordered for 230 VΔ/400 VY or 400 VΔ/690 VY (voltage code **"22"** or **"34"**). Not possible in combination with order code **D34**.
- 25) As adhesive label for frame sizes 80 and 90.
- 26) The delivery time for the factory test certificate may differ from the delivery time for the motor and it will be dispatched by email.
- 27) The Operating Instructions (compact) are available in PDF format for all official EU languages at <http://support.automation.siemens.com/WW/view/en/40761976>.
- 28) Not possible in combination with order codes **N05**, **N06**, **N07**, **N08**, and **N11**.
- 29) Order codes **F70** and **F76** cannot be combined.
- 30) When ordering with order code **R70** and **R71**, order code **R50** is included.
- 31) Not possible for 2-pole and 4-pole motors with increased power (11th position of the Article No.: 6) in frame sizes 80 and 90.
- 32) Possible with frame sizes 180 and 200 with screw-mounted fan cover.
- 33) For frame sizes 180 and 200, constructed with metric entry thread.
- 34) Order code **S06** cannot be combined with order code **S00** and **S01**. It can be combined with **Y53** and **Y56** on request.
- 35) Please note the additional use of order code **D22** "Motor without CE marking for export outside EEA (see EU Directive 640/2009)".
- 36) A minimum cantilever force $F_{\min}$ of $0.5 \cdot F_{\max}$ is required for NU bearings (cylindrical roller bearings) in contrast to ball bearings. Cylindrical roller bearings are not suitable for coupling output or for brief periods of no-load operation without cantilever force.
- 37) The rated voltage is indicated on the rating plate without voltage range. Order code **D40** does not authorize importing into Canada. The North America export versions Eagle Line 1LE1021 NEMA Energy Efficient and 1LE1023 NEMA Premium Efficient are available for this purpose.
- 38) Not possible in combination with voltage code (12th or 13th position of the Article No.) 17, 18, 30, 31, 60, 61, 62, 63 and 90 with the additional order codes **M1A**; **M2A**; **M2B**; **M1B**; **M1C**; **M2C**; **M1D**; **M2D**; **M1E**; **M2E**; **M1F**; **M2F**; **M1G**; **M2G**; **M1H**; **M2H**; **1K**; **M2K**; **M1J**; **M2J**; **M1L**; **M2L**; **M1M**; **M2M** and **M3A**.
- 39) Not possible in combination with order code **R50**.
- 40) Not UL certified. Not in combination with option **D31**.
- 41) Not possible in combination with order codes **R70**, **R71**, **R72**, and **R73**.

SIMOTICS SD 1LE1 standard motors

Options · Cast-iron series 1LE15 Basic Line, 1LE16 Performance Line

- Standard version
- Without additional charge
- This order code only determines the price of the version – Additional plain text is required.
- ✓ With additional charge
- O.R. Possible on request
- Not possible

2

- 1) Up to frame size 160 not possible when brake is mounted.
- 2) Evaluation with appropriate tripping unit (see Catalog IC 10) is recommended.
- 3) Parallel Whitworth threaded pipe DIN ISO 228 (DIN 259) BSPP (British Standard Pipe Parallel) threaded pipe for connections not sealed in the thread (cylindrical), external = G.
- 4) Cannot be used for motors in UL version (order code **D31**). The grease lifetime specified in Catalog Section 1 "Introduction" refers to CT 40 °C. If the coolant temperature is increased by 10 K, the grease lifetime and regreasing interval are halved.
- 5) Not possible for 1LE15 and 1LE16 motors with increased power.
- 6) A second shaft extension is not possible. Please inquire for mounted brakes.
- 7) For order codes **F10**, **F11**, and **F12**, the brake supply voltage must be specified or ordered.
- 8) The 1XP8 rotary pulse encoders are fitted with a protective cover as standard. The protective cover is omitted at the factory when a rotary pulse encoder is combined with a separately driven fan, because in this case the rotary pulse encoder is installed under the fan cover.
- 9) In combination with a separately driven fan (order code **F70**) the 1XP8032-10 rotary pulse encoder is used instead of 1XP8012-10 or 1XP8032-20 is used instead of 1XP8012-20.
- 10) The LL and HOG rotary pulse encoders up to frame size 160 are fitted with a protective cover as standard. The protective cover is omitted at the factory when a rotary pulse encoder is combined with a separately driven fan, because in this case the rotary pulse encoder is installed under the fan cover.
- 11) Option (encoder mounting) is only possible for motors with a mounted separately driven fan or for naturally cooled motors (without an external fan). This option can be used in combination with brakes of type KFB! This option cannot be used in combination with brakes of type 2LM8.
- 12) Order code **H00** provides mechanical protection for encoders.
- 13) Not possible for type of construction IM V3.
- 14) Not possible in combination with HOG 9 DN 1024 I rotary pulse encoder (order code **G05**) and/or brake 2LM8 (order code **F01**).
- 15) Not possible in combination with 2LM8 brake – order code **F01**.
- 16) In connection with mountings, the respective technical specifications must be observed, please inquire before ordering.
- 17) The rated voltage is indicated on the rating plate without voltage range. Order code **D40** does not authorize importing into Canada. The North America export versions Eagle Line 1LE1521 NEMA Energy Efficient and 1LE1523/1LE1623 NEMA Premium Efficient are available for this purpose.
- 18) Possible up to 600 V max. The rated voltage is indicated on the rating plate without voltage range. Order codes **D30** and **D31** do not authorize importing into USA and Mexico. The North America export versions Eagle Line 1LE1521 NEMA Energy Efficient and 1LE1523/1LE1623 NEMA Premium Efficient are available for this purpose.
- 19) For Performance Line motors (all frame sizes) and Basic Line motors (from frame size 280) in the standard version.
- 20) On request for 2-pole motors (concerns frame sizes 225 to 315).
- 21) When motors are ordered that have a longer or shorter shaft extension than normal, the required position and length of the feather keyway must be specified in a sketch. It must be ensured that only feather keys in accordance with EN 50347, Form A are used. The feather keyway is positioned centrally on the shaft extension. The length is defined by the manufacturer in accordance with the appropriate standard. Not valid for: Conical shafts, non-standard threaded journals, non-standard shaft tolerances, friction welded journals, extremely "thin" shafts, special geometry dimensions (e.g. square journals), hollow shafts. Valid for non-standard shaft extensions DE or NDE. The feather key is always supplied. For order codes **Y58**, **Y59** and **L05** the following applies:
 - Dimensions D and DA ≤ ball bearing inner diameter (see dimension tables for "Dimensions")
 - Dimensions E and EA ≤ 2 × length E (standard) of the shaft extension.
- 22) Converter operation is permitted for 1LE1 motors with metal external fans.
- 23) Can be ordered for 230 VΔ/400 VY or 400 VΔ/690 VY (voltage code **"22"** or **"34"**). Not possible for 8-pole motors and in combination with order code **D34**.
- 24) Wearing parts (bearings) are excluded from the warranty extension.
- 25) The delivery time for the factory test certificate may differ from the delivery time for the motor.
- 26) The Operating Instructions (compact) are available in PDF format for all official EU languages at <http://support.automation.siemens.com/WW/view/en/40761976>.
- 27) With **H08**, feet dimensions C and CA differ from EN 50347! Further information is available in the DT Configurator (see Appendix, "Tools and engineering").
- 28) Order codes **F70** and **F76** cannot be combined.
- 29) Not possible in combination with order codes **Q72** and **Q78**.
- 30) For frame sizes 100 to 132 only possible in combination with order code **R50**.
- 31) Not possible in combination with order codes **N05**, **N06**, **N07**, **N08**, and **N11**.
- 32) For frame size 315, when combining order codes **F01** and **F12**, the rectifier for the brake will be supplied separately as a single part.
- 33) Order code **S06** cannot be combined with order codes **S00**, **S01**, and **S02**. It can be combined with **Y53** and **Y56** on request.
- 34) Order codes **F70** (separately driven fan) and **H02** (vibration-proof version) cannot be combined for motors in frame sizes 71, 80, and 90.
- 35) Please note the additional use of order code **D22** "Motor without CE marking for export outside EEA (see EU Directive 640/2009)".
- 36) A minimum cantilever force $F_{\min}$ of $0.5 \cdot F_{\max}$ is required for NU bearings (cylindrical roller bearings) in contrast to ball bearings. Cylindrical roller bearings are not suitable for coupling output or for brief periods of no-load operation without cantilever force.
- 37) Order code **R62** only possible in combination with **R50**.
- 38) Supplied with the condensation drainage holes sealed at the drive end DE and non-drive end NDE (IP55, IP56, IP65). If the condensation drainage holes are required for motors of the IM B6, IM B7, or IM B8 type of construction (feet on side or top), the motors must be ordered in the respective type of construction and with order code **H03**, so that the condensation drainage holes will be placed in the correct position.
- 39) Not possible in combination with order code **R50**.
- 40) Not UL certified. Not in combination with option **D31**.
- 41) With IM B5 flange, only possible in combination with **H08**.

Overview

Couplings

The motor from Siemens is connected to the machine or gear unit through a coupling. Siemens is an important coupling manufacturer with a wide range of products.

For standard applications, Siemens recommends that flexible couplings, types N-EUPEX and RUPEX or torsionally rigid couplings, types ARPEX and ZAPEX are used. For special applications, FLUDEX and ELPEX-S couplings are recommended.

Available from:

Taper pins according to DIN 258 with threaded ends and constant taper lengths

Taper pins are used for components that are repeatedly removed. The drilled hole is conically ground using a conical reamer until the pin can be pushed in by hand until the cone shoulder lies approx. 3 to 4 mm above the rim of the hole.

It can then be driven in using a hammer until it is correctly seated. The pin is removed from the drilled hole by screwing on the nut and tightening it.

Standardized taper pins are commercially available.

For instance, available from:

Otto Roth GmbH & Co. KG
Rutesheimer Strasse 22
70499 Stuttgart, Germany

Email: info@ottoroth.de

Foundation block according to DIN 799

The foundation blocks are inserted into the stone foundation and embedded in concrete. They are used for fixing machines of medium size, slide rails, pedestal bearings, base frames, etc. After the fixing bolts have been unscrewed, the machines can be shifted without them having to be lifted.

When the machine is initially installed, the foundation block that is bolted to the machine (without shims) and fitted with taper pins is not embedded with concrete until the machine has been completely aligned. In this case, the machine is positioned 2 to 3 mm lower. The difference in shaft height is compensated for by inserting shims on final installation. The taper pins safeguard the exact position of the machine when it is repeatedly removed and replaced without the need for realignment.

Slide rails with fixing bolts and tensioning screws according to DIN 42923

Slide rails are used to tension the belt of a machine easily and conveniently when a belt tightener is not available. They are fixed to the base using stone bolts or foundation blocks.

The assignment of slide rails to motor size can be found in DIN 42923.

For motors of frame sizes 355 to 450, there are no standardized slide rails (please inquire).

More information

Spare motors and repair parts

- Supply commitment for spare motors and repair parts following delivery of the motor:
 - For up to 3 years after delivery of the original motor, in the event of total motor failure, Siemens will supply a comparable spare motor with regard to the mounting dimensions and functions. (The type series may vary.)
 - If a spare motor is supplied within the 3-year period, this does not mean that the warranty restarts.
 - Replacement motors delivered after the active production of the machine series are also identified as spare motors on the rating plate.
 - Spare parts are offered only for these spare motors on request; repair and replacement are not possible.
 - After a period of 3 years (after the delivery of the original motor), it is only possible to repair these motors (depending on the availability of the spare parts required).
 - For up to 5 years after the delivery of the original motor, spare parts will be available and for a further 5 years, Siemens will provide information about spare parts and will supply documents when required.

- When repair parts are ordered, the following details must be provided:

- Designation and part number
- Article No. and factory number of the motor.

Example for ordering a fan cover 1LE1003, frame size 112 M, 4-pole:

Fan cover No. 7.40, 1LE1003-1BB23-4AA4-Z, part No. E1001/5236197_01_001

- For bearing types, see Catalog Section 1 "Introduction".
- Repair parts for 1MJ6, 1MJ7, 1MJ8, 1MJ1, 1ME8, 1ML8 motors are available on request.
- For standard components, a commitment to supply repaired parts does not apply.
- Support hotline

Overview

- Dimensional drawings according to EN 50347 and IEC 60072.

Fits

The shaft extensions specified in the dimension tables (DIN 748) and centering spigot diameters (EN 50347) are machined with the following fits:

Dimension designation	ISO fit	DIN ISO 286-2
D, DA	to 30	j6
	over 30 to 50	k6
	over 50	m6
N	to 250	j6
	over 250	h6
F, FA		h9
K		H17
S	Flange (FF)	H17

The drilled holes of couplings and belt pulleys should have an ISO fit of at least H7.

Dimension tolerances

For the following dimensions, the admissible deviations are given below:

Dimension designation	Dimension	Admissible deviation
H	to 250	– 0.5
	over 250	– 1.0
E, EA		– 0.5

Keyways and feather keyways (dimensions GA, GC, F, and FA) are made in compliance with DIN 6885 Part 1.

- All dimensions are specified in mm.

Dimension sheet generator (within the DT Configurator)

Overview

A dimensional drawing can be created in the Drive Technology (DT) Configurator for every configurable motor. A dimensional drawing can be requested for every other motor.

When a complete Article No. is entered or configured with or without order codes, a dimensional drawing can be called up under the "Documentation" tab.

These dimensional drawings can be presented in different views and sections and printed.

The corresponding dimension sheets can be exported, saved and processed further in DXF format (interchange/import format for CAD systems) or as bitmap graphics.

Online access in the Siemens Industry Mall

The DT Configurator is integrated into the Siemens Industry Mall and can be used on the Internet without installation.

German: www.siemens.de/dt-konfigurator

English: www.siemens.com/dt-configurator

Offline access in the Interactive Catalog CA 01

The DT Configurator is also integrated on the DVD of the Interactive Catalog CA 01 – the offline version of Siemens Industry Mall. CA 01 can be ordered from the relevant Siemens sales office or via the Internet:

www.siemens.com/automation/CA01

														176	227	648					513

* Please note that version 3AB0 does not comply with EN 50347 with respect to assignment of this dimension to the frame size.

¹⁾ With terminal box position right, terminal box left, and with order code **H01** only screwed-on feet with 3 drilled holes with dimension "B" (406, 457, and 508 mm). The dimension "BB" will then be 666 mm.

²⁾ 1LE1504-3AB0 and 1LE1604-3AB0 4-pole motors cannot be constructed in standard frame size 315 S because they require the longer housing of frame size 315 M in order to achieve the requisite efficiency levels. The foot clearance dimension "B" therefore changes from 406 to 457 mm. The motors comply with standard IEC 60034, but not with standard EN 50347 in this respect.

SIMOTICS SD standard motors next generation

Orientation

Overview

The SIMOTICS SD next generation is a new scalable generation of low-voltage motors. With their impressive performance and the additional versatility in their range of applications, this new motor series offers entry into a future-proof drive technology.

In addition to the future topics of digitalization and energy efficiency, this motor generation was developed with the focus on design optimization, which has resulted in a very compact motor design with a high power density. A standardized option range and the variable terminal box concept also enable flexible use of the motors in different system configurations and applications. The fact that the motors can run either on the line or on a converter is part of their versatility.

The following versions are available in the new 1LE5 motor series, differentiated by their performance features and functionality:

- **SIMOTICS SD**

These motors are characterized by reliable and powerful performance even in the toughest environmental conditions. The characteristics with higher torques ensure that higher starting and breakaway torques are available.

- **SIMOTICS SD Add**

The characteristic product feature of the SIMOTICS SD Add are the low starting currents. These not only meet industry-specific specifications, above all, in process industries, but also have a positive impact on the operating quality (higher power system stability, lower thermal load, increased motor lifetime). Through the availability of country-specific certificates, these motors can be used in all the important global regions and markets.

One decisive advantage of these SIMOTICS SD next generation motors is the possibility of digital communication. This results in many advantages not just for engineering but throughout the product lifecycle.

SIMOTICS Digital Data App – Access to motor data at any time

The freely available SIMOTICS Digital Data App enables access to all motor-specific data and documents (electrical and mechanical data, dimensional drawings, operating instructions, spare part information, etc.) by reading in the data matrix codes present on every motor as standard. This increases transparency and makes commissioning and servicing easier.

SIMOTICS SD Next Generation – The first motors to have an interface with the digital world

The SIMOTICS SD next generation motors will be the first low-voltage motors to support cloud-based condition data analysis via MindSphere and MindApp with SIMOTICS CONNECT in the near future. The motors are therefore ready for preventive maintenance and fast service, which further increases the availability and productivity of your system.

AGMA

Benefits

- Rugged design in the cast-iron housing increases reliability and availability.
- Compact dimensions/high power density enable use even in confined space conditions.
- High energy efficiency on the line (IE3, IE4) and on a converter (IES2) enable energy-saving operation.
- A standardized range of options and a variable terminal box concept increase the flexible adaptation to the requirements of the application.
- Support of line and converter operation reduces the variety.
- Provision of comprehensive CAD data simplifies the design and engineering phase.
- Digital features, such as the data matrix code and support by the cloud-based condition data analysis via MindSphere as part of SIMOTICS IQ permit efficient service and preventive maintenance.

Application

SIMOTICS SD 1LE5 motors are ideal for use in a large number of standard applications, such as

- Pumps, fans, compressors
- Conveyors
- Winders
- Mixers
- Extruders
- Cranes

They are preferably used in industries such as

- Mining, cement
- Chemical industry
- Oil and gas
- Steel industry
- Water, waste water
- Heating, ventilation, and air-conditioning (HVAC)
- Pulp and paper industry
- Marine engineering

Technical specifications

Overview of technical specifications

This table lists the most important technical specifications. For more information and details, see Catalog Section 1 "Introduction".

Type of motor	SIMOTICS SD 1LE5 IEC Low-Voltage Motors
Connection types	Star/delta connection The connection type to be used can be established from the Article No. supplements for the required motor.
Number of poles	2, 4, 6, 8
Frame sizes	315 L ... 355 L
Rated power	200 ... 500 kW
Frequencies	50 Hz and 60 Hz
Versions	• IE3 (Premium Efficiency) • IE4 (Super Premium Efficiency)
Marking	IEC 60034-30-1 IE3, IE4: 2, 4 and 6-pole
Rated speed (synchronous speed)	1000 ... 3600 rpm
Rated torque	670 ... 3850 Nm
Insulation of the stator winding in accordance with EN 60034-1 (IEC 60034-1)	Temperature class 155 (F), utilized to temperature class 130 (B) DURIGNIT IR 2000 insulation system
Degree of protection according to EN 60034-5 (IEC 60034-5)	IP55 as standard
Cooling in accordance with EN 60034-6 (IEC 60034-6)	• Self-ventilated (IC 411) • Forced-air cooled (IC 416)
Permissible coolant temperature and installation altitude	–20 ... +40 °C as standard, installation altitude up to 1000 m above sea level. See "Coolant temperature and installation altitude" in Catalog Section 1 "Introduction".
Standard voltages according to EN 60038 (IEC 60038)	50 Hz: 400 V, 500 V, 690 V The voltage used can be found in the "Selection and ordering data" for the required motor.
Type of construction according to EN 60034-7 (IEC 60034-7)	• Without flange: IM B3, IM B6, IM B7, IM B8, IM V5, IM V6 • With flange: IM B5, IM V1, IM V3, IM B35
Paint finish	Standard: color RAL 7030 stone gray
Suitability of paint finish for climate group according to IEC 60721, Part 2-1	See "Paint finish" in Catalog Section 1 "Introduction".
Vibration severity grade according to EN 60034-14 (IEC 60034-14)	Grade A (normal – without special vibration requirements) Optionally: Grade B (with special vibration requirements) See "Balance and vibration severity" in Catalog Section 1 "Introduction".
Shaft extension according to DIN 748 (IEC 60072)	Balancing type: Half-key balancing as standard See "Balance and vibration severity" in Catalog Section 1 "Introduction".
Sound pressure level according to EN ISO 1680 (tolerance +3 dB)	The sound pressure level is listed in the selection and ordering data for the required motor.
Weights	The weight is listed in the selection and ordering data for the required motor.
Modular mounting concept	Rotary pulse encoder, brake, separately driven fan or prepared for mountings
Consistent series concept	• Terminal box obliquely partitioned and rotatable through 4 x 90° • Bearings at DE and NDE are of identical design, reinforced bearings available as an option
Options	See "Article No. supplements and special versions"

More information

For further information, please get in touch with your local Siemens contact and use the DT Configurator.

Contacts: www.siemens.com/automation/partner

DT Configurator: www.siemens.com/dt-configurator

You can find out about certain technologies through Siemens contact partners worldwide.

Wherever possible, you will find a local contact for:

- Technical support
- Spare parts/repairs
- Service
- Training
- Marketing & Sales
- Technical consultation/engineering

You start by selecting a:

- country
- product or
- sector.

SIMOTICS SD standard motors next generation

Orientation

Article number code

Selection and ordering data

The article number consists of a combination of digits and letters and is divided into three hyphenated blocks to provide a better overview, e.g.:

**1LE5504-3AA63-4AA2-Z
H00**

The first block (positions 1 to 7) identifies the motor type. The second block (positions 8 to 12) defines the motor frame size and length, the number of poles and in some cases the frequency/voltage. In the third block (positions 13 to 16), the frequency/voltage, type of construction and further design features are encoded.

For deviations in the second and third block from the catalog codes either **Z** or **90** should be used as appropriate.

Ordering data:

- Complete Article No. and order code(s) or plain text
- If a quotation has been requested, please specify the quotation number in addition to the Article No.
- When ordering a complete motor as a spare part, please specify the works serial No. for the previously supplied motor as well as the Article No.

Structure of the Article No.:		Position:	1	2	3	4	5	6	7	-	8	9	10	11	12	-	13	14	15	16
1st to 4th position: Digit, letter, letter, digit	- Self-ventilated by fan mounted on and driven by the rotor - Forced-air cooled by air flow from the fan to be driven with option extension F90		1	L	E	5														
5th position: Digit	Cast-iron housing Basic Line Cast-iron housing Performance Line						5 6													
6th to 7th position: 2 digits	SIMOTICS SD motors with IE3 Premium Efficiency SIMOTICS SD Add motors with IE3 Premium Efficiency SIMOTICS SD motors with IE4 Super Premium Efficiency SIMOTICS SD Add motors with IE4 Super Premium Efficiency							0 3 0 3	3 3 4 4											
8th, 9th and 11th position: Digit, letter, digit	Motor frame size (frame size as a combination of shaft height and overall length, encoded)										3	A ... B		3 ... 7						
10th position: Letter	No. of poles A: 2-pole B: 4-pole C: 6-pole D: 8-pole												A B C D							
12th and 13th position: 2 digits	Voltage, circuit and frequency (encoded with two digits, 9-0 requires order code M.. (e.g. M1Y))														0 ... 9		0 ... 7			
14th position: Letter	Type of construction (encoded with A ... V)																	A ... V		
15th position: Letter	Motor protection (encoded with A ... Z; Z requires order code Q.. (e.g. Q3A))																		A ... Z	
16th position: Digit	Terminal box position Terminal box base left with terminal box 45° Terminal box base right with terminal box 45°																		2 3	
	Special order versions: encoded – additional order code required not encoded – additional plain text required																			- Z

Ordering example

Selection criteria	Requirement	Structure of the Article No.

AGMA

¹⁾ Parallel supply lines are required, except in the case of connection to 690 V.

²⁾ For a power rating of 315 kW, 2-pole, 60 Hz and 315 kW, 4-pole, 50 Hz, a larger terminal box can be used (order code **R50**) due to the magnitude of the current.
Order code **R50** alters the motor dimensions.

¹⁾ Parallel supply lines are required, except in the case of connection to 690 V.

²⁾ For a power rating of 315 kW, 2-pole, 60 Hz and 315 kW, 4-pole, 50 Hz, a larger terminal box can be used (order code **R50**) due to the magnitude of the current.
Order code **R50** alters the motor dimensions.

¹⁾ Parallel supply lines are required, except in the case of connection to 690 V.

²⁾ For a power rating of 315 kW, 2-pole, 60 Hz and 315 kW, 4-pole, 50 Hz, a larger terminal box can be used (order code **R50**) due to the magnitude of the current.
Order code **R50** alters the motor dimensions.

AGMA

- ¹⁾ The types of construction IM B6/7/8, IM V6 and IM V5 with/without protective cover are also possible as long as no stamping of these types of construction on the rating plate is required. As standard the type of construction IM B3 is then stamped on the rating plate. With type of construction IM V5 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.
- ²⁾ The type of construction is stamped on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

- ³⁾ In combination with an encoder, it is not necessary to order the protective cover (order code **H00**), as this is delivered as a protection for the encoder as standard. In this case the protective cover is standard design (without additional charge).
- ⁴⁾ The "Standard cylindrical shaft extension (second shaft extension)" option (order code **L05**) is not possible.
- ⁵⁾ The types of construction IM V3 and IM V1 with/without protective cover are also possible as long as no stamping of these types of construction on the rating plate is required. As standard the type of construction IM B5 is then stamped on the rating plate. With type of construction IM V1 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.

AGMA

¹⁾ For the Performance Line, motor protection by means of PTC thermistors with 3 built-in temperature sensors for tripping (motor protection code letter B) is already included in the basic price. For the Performance Line, the option "without motor protection" (motor protection code letter A) is not possible.

²⁾ Evaluation with associated tripping unit (see Catalog IC 10) is recommended.

- Standard version
- Without additional charge
- This order code only determines the price of the version – Additional plain text is required.
- ✓ With additional charge
- R. Possible on request
- Not possible

- 1) Evaluation with associated tripping unit (see Catalog IC 10) is recommended.
- 2) Parallel Whitworth threaded pipe DIN ISO 228 (DIN 259) BSPP (British Standard Pipe Parallel) threaded pipe for connections not sealed in the thread (cylindrical), external = G.
- 3) The grease lifetime specified in Catalog Section 1 "Introduction" refers to CT 40 °C. If the coolant temperature is increased by 10 K, the grease lifetime and regreasing interval are halved.
- 4) Not possible for 1LE5 motors with increased power.
- 5) A second shaft extension is not possible. Please inquire for mounted brakes.
- 6) For order codes **F10**, **F11**, and **F12**, the brake supply voltage must be specified or ordered.
- 7) The 1XP8 rotary pulse encoders are fitted with a protective cover as standard. The protective cover is omitted at the factory when a rotary pulse encoder is combined with a separately driven fan, because in this case the rotary pulse encoder is installed under the fan cover.
- 8) In combination with a separately driven fan (order code **F70**) the 1XP8032-10 rotary pulse encoder is used instead of 1XP8012-10 or 1XP8032-20 is used instead of 1XP8012-20.
- 9) For frame sizes 315 and 355, LL and HOG rotary pulse encoders are fitted with a protective cover as standard. The protective cover is omitted at the factory when a rotary pulse encoder is combined with a separately driven fan, because in this case the rotary pulse encoder is installed under the fan cover. Protective cover (order code **G43**) possible.
- 10) Option (encoder mounting) is only possible for motors with a mounted separately driven fan or for naturally cooled motors (without an external fan). This option can be used in combination with brakes of type KFB and SFB. This option cannot be used in combination with brakes of type 2LM8.
- 11) Order code **H00** provides mechanical protection for encoders.
- 12) Not possible for type of construction IM V3.
- 13) Not possible in combination with HOG 9 D 1024l rotary pulse encoder (order code **G05**) and/or 2LM8 brake (order code **F01**).
- 14) Not possible in combination with 2LM8 brake (order code **F01**).
- 15) In connection with mountings, the respective technical specifications must be observed, please inquire before ordering.
- 16) The rated voltage is indicated on the rating plate without voltage range.
- 17) Possible up to 600 V max. The rated voltage is indicated on the rating plate without voltage range. Order codes D30 does not authorize importing into USA and Mexico.
- 18) On request for 2-pole motors
- 19) When motors are ordered that have a longer or shorter shaft extension than normal, the required position and length of the feather keyway must be specified in a sketch. It must be ensured that only feather keys in accordance with EN 50347 are used. The feather keyway is positioned centrally on the shaft extension. The length is defined by the manufacturer in accordance with the appropriate standard. Not valid for: Tapered shafts, non-standard threaded journals, non-standard shaft tolerances, friction welded journals, extremely "thin" shafts, special geometry dimensions (e.g. square journals), hollow shafts. Valid for non-standard shaft extensions DE or NDE. The feather keys are supplied in every case. For order codes **Y58**, **Y59** and **L05** the following applies:
 - Dimensions D and DA ≤ ball bearing inner diameter (see dimension tables for "Dimensions")
 - Dimensions E and EA ≤ 2 × length E (standard) of the shaft extension.
- 20) Can be ordered for 400V/690VY (voltage code "34").
- 21) The delivery time for the factory test certificate may differ from the delivery time for the motor.
- 22) The Operating Instructions (Compact) are available in PDF format for all official EU languages at <http://support.automation.siemens.com/WW/view/en/10803948/133300>
- 23) With **H08**, feet dimensions C and CA differ from EN 50347! Further information is available in the DT Configurator (see Appendix, "Tools and engineering").
- 24) Not possible in combination with order codes **Q72** and **Q78**.
- 25) Not possible in combination with order codes **N05**, **N06**, **N07**, **N08** and **N11**.
- 26) When order codes **F01** and **F12** are combined, the rectifier for the brake will be supplied separately as a single part.
- 27) Order code **S06** cannot be combined with order code **S00** and **S01**. It can be combined with **Y53** on request.
- 28) A minimum cantilever force $F_{\min}$ of $0.5 \cdot F_{\max}$ is required for NU bearings (cylindrical roller bearings) in contrast to ball bearings. Cylindrical roller bearings are not suitable for coupling output or for brief periods of no-load operation without cantilever force.

Accessories

Overview

Couplings

The motor from Siemens is connected to the machine or gear unit through a coupling. Siemens is an important coupling manufacturer with a wide range of products.

For standard applications, Siemens recommends that flexible couplings, types N-EUPEX and RUPEX or torsionally rigid couplings, types ARPEX and ZAPEX are used. For special applications, FLUDEX and ELPEX-S couplings are recommended.

Taper pins according to DIN 258 with threaded ends and constant taper lengths

Taper pins are used for components that are repeatedly removed. The drilled hole is conically ground using a conical reamer until the pin can be pushed in by hand until the cone shoulder lies approx. 3 to 4 mm above the rim of the hole.

It can then be driven in using a hammer until it is correctly seated. The pin is removed from the drilled hole by screwing on the nut and tightening it.

Standardized taper pins are commercially available.

For instance, available from:

Otto Roth GmbH & Co. KG
Rutesheimer Strasse 22
70499 Stuttgart, Germany
Phone +49 (711) 1388-0
Fax: +49 (711) 1388-233

www.ottoroth.de

Email: info@ottoroth.de

Foundation block according to DIN 799

The foundation blocks are inserted into the stone foundation and embedded in concrete. They are used for fixing machines of medium size, slide rails, pedestal bearings, base frames, etc. After the fixing bolts have been unscrewed, the machines can be shifted without them having to be lifted.

When the machine is initially installed, the foundation block that is bolted to the machine (without shims) and fitted with taper pins is not embedded with concrete until the machine has been completely aligned. In this case, the machine is positioned 2 to 3 mm lower. The difference in shaft height is compensated for by inserting shims on final installation. The taper pins safeguard the exact position of the machine when it is repeatedly removed and replaced without the need for realignment.

Slide rails with fixing bolts and tensioning screws according to DIN 42923

Slide rails are used to tension the belt of a machine easily and conveniently when there is no belt-tensioning pulley. They are fixed to the base using stone bolts or foundation blocks.

The assignment of slide rails to motor size can be found in DIN 42923. For motors of frame sizes 355 to 450, there are no standardized slide rails (please inquire).

AGMA

More information**Replacement motors and repair parts**

- Commitment to provide replacement motors and repair parts following delivery of the motor:
 - For up to 3 years after delivery of the original motor, in the event of total motor failure, Siemens will supply a comparable replacement motor with regard to the mounting dimensions and functions. (The type series may vary.)
 - If a replacement motor is supplied within the 3-year period, this does not mean that the warranty restarts.
 - Replacement motors delivered after the active production of the motor series are also identified as spare motors on the rating plate.
 - Spare parts are offered only for these spare motors on request; repair and replacement are not possible.
 - After a period of 3 years (after the delivery of the original motor), it is only possible to repair these motors (depending on the availability of the spare parts required).
 - For up to 5 years after the delivery of the original motor, spare parts will be available and for a further 5 years, Siemens will provide information about spare parts and will supply documents when required.
- When repair parts are ordered, the following details must be provided:
 - Designation and part number
 - Article No. and factory number of the motor.
- For bearing types, see Catalog Section 1 "Introduction".
- For standard components, a commitment to supply repaired parts does not apply.
- Support hotline
In Germany
Phone +49 (180) 5050448

You will find telephone numbers for other countries on our Internet site:

SIMOTICS SD standard motors next generation

Dimensions

Notes on the dimensions

Overview

- Dimension designations according to EN 50347 and IEC 60072.

■ Fits

The shaft extensions specified in the dimension tables (DIN 748) and centering spigot diameters (EN 50347) are machined with the following fits:

Dimension designation	ISO fit DIN ISO 286-2	
D, DA	to 30	j6
	over 30 to 50	k6
	over 50	m6
N	to 250	j6
	over 250	h6
F, FA		h9
K		H17
S	flange (FF)	H17

The drilled holes of couplings and belt pulleys should have an ISO fit of at least H7.

■ Dimension tolerances

For the following dimension designations, the admissible deviations are given below:

Dimension designation	Dimension	Admissible deviation
H	to 250	– 0.5
	over 250	– 1.0
E, EA		– 0.5

Keyways and feather keyways (dimensions GA, GC, F, and FA) are made in compliance with DIN 6885 Part 1.

- All dimensions are specified in mm.

Dimension sheet generator (within the Drive Technology Configurator)

Overview

A dimensional drawing can be created in the Drive Technology (DT) Configurator for every configurable motor. A dimensional drawing can be requested for every other motor.

When a complete Article No. is entered or configured with or without order codes, a dimensional drawing can be called up under the "Documentation" tab.

These dimensional drawings can be presented in different views and sections and printed.

The corresponding dimension sheets can be exported, saved and processed further in DXF format (interchange/import format for CAD systems) or as bitmap graphics.

Online access in the Siemens Industry Mall

The DT Configurator is integrated into the Siemens Industry Mall and can be used on the Internet without installation.

German: www.siemens.de/dt-konfigurator

English: www.siemens.com/dt-configurator

Offline access in the Interactive Catalog CA 01

The DT Configurator is also integrated on the DVD of the Interactive Catalog CA 01 – the offline version of Siemens Industry Mall. CA 01 can be ordered from the relevant Siemens sales office or via the Internet: www.siemens.com/automation/CA01

SIMOTICS VSD motors for converter operation

Introduction

Overview

SIMOTICS GP/SD VSD motors optimized for converter operation (VSD = *Variable Speed Drive*)

In addition to the standard motors optimized for line operation, Siemens also offers two motor lines optimized for converters for variable-speed operation on a frequency converter.

- SIMOTICS VSD10 line – induction motors for converter operation
- SIMOTICS VSD4000 line – reluctance motors for operation with SINAMICS G120/S120 converters

The motors are optionally available with an aluminum housing (SIMOTICS GP) or with a rugged cast-iron housing (SIMOTICS SD).

SIMOTICS VSD motors are characterized by the following features:

- High energy efficiency:
Because the SIMOTICS VSD motors are optimized for operation with SINAMICS converters, the system power losses are low and the energy efficiency therefore high. In particular, the SIMOTICS VSD4000 line synchronous reluctance motors in conjunction with optimized control algorithms result in excellent loss-optimized operation in the speed setting range with a full and partial load and are superior to an induction motor system that has comparable nominal efficiency, especially in the partial-load range.
- Optimized investment costs:
Optimizing the assignment of the motor active part to the Power Module results in low capital investment costs. The motors and frequency converters are optimally harmonized and coordinated with one another. No power unit upgrade is therefore required. This applies in particular to the SIMOTICS VSD10 line motors on account of their optimized motor design.

- Low space requirement, low weight:
The high power density and compact design ensure low space requirements combined with low weight.
- Very rugged and reliable:
High availability using the standard protection functions for converter operation (KTY84-130 temperature sensors). As a result of the optimized insulation system, a high degree of reliability is obtained for four-quadrant operation with SINAMICS converters. SIMOTICS VSD10 motors also have insulated bearings at the non-drive end (NDE) in frame sizes 280 and 315.
- Fast and simple commissioning by transferring a motor code on the frequency converter.
- Flexible in use:
SIMOTICS VSD line motors are designed as standard for operation with a 50 Hz, 60 Hz and 87 Hz characteristic.
- Wide range of options:
By consistently utilizing the 1LE1 standard motor platform, almost all options of the 1LE1 line motors can also be used for the SIMOTICS VSD line motors.
- High level of compatibility:
Line and converter motors can be easily interchanged due to their identical dimensions and customer interfaces. The connection and operating philosophy is exactly the same as for 1LE1 line motors.
- International applicability:
The motors are not subject to any minimum efficiency requirements for specific countries.

Application

The SIMOTICS GP/SD VSD motors can be deployed in all industries and sectors, e.g. paper, steel, energy, chemistry, water/waste water.

The wide field of applications that can be addressed includes, for example, the following:

- Pumps
- Fans
- Compressors
- Cranes
- Conveyor belts

Design

The SIMOTICS GP/SD VSD motors are based on the platform of the SIMOTICS 1LE1 motor type series. For this reason, the principal design is the same as for the 1LE1 line motors – the mechanical parts are identical. The motors are adapted to the converter by appropriately dimensioning the active part and VSD-specific rating plate data.

Moreover, a large number of the variations available in the SIMOTICS 1LE1 motors (types of construction, motor protection, terminal box position, and options) are also available for the VSD motors.

SIMOTICS VSD4000 line	SIMOTICS VSD10 line
Use in VSD applications with high dynamic requirements	Use in VSD applications
Focus on low operating costs	Focus on low investment costs
Very low system power losses due to the reluctance principle and optimum coordination of the motor with the converter	Low system power losses due to optimum coordination of the motor with the converter
Optimized for operation with SINAMICS G120 and S120	Optimized for use with SINAMICS G120, G130, G150
36 month warranty	• 12 month warranty for SIMOTICS GP • 24 month warranty for SIMOTICS SD (optionally expandable)

²⁾ Rated speed 1500 rpm.

³⁾ Other degrees of protection optionally available.

⁴⁾ 87 Hz characteristic not available for all frame sizes.

SIMOTICS GP/SD VSD4000 line reluctance motors for SINAMICS converters

Orientation

Overview

SIMOTICS GP/SD VSD4000 line motor series: 1FP10, 1FP15

As a result of their flexibility and the wide range of versions, SIMOTICS GP/SD VSD4000 line motors are especially suitable for sectors and industries, where the focus is on minimum life-cycle costs (TCO) and/or operation with a high dynamic performance.

Versions of the
SIMOTICS GP/SD VSD4000 line motors: 1FP10, 1FP15

The motors have compact dimensions in a surface-cooled, enclosed version with self-ventilation. They have been specifically designed for converter operation.

1FP10 General Purpose for converter operation

- Four-quadrant converter operation, optimally harmonized with the SINAMICS G120, PM240-2 and S120 (ALM, BLM) drive system.
- IP55 degree of protection
- IC411 cooling method, self-ventilated (IC416 cooling method, force-ventilated version optional)
- Housing: Aluminum
- Frame sizes: 80/112 to 200 ¹⁾

1FP15 Severe Duty for converter operation

- Four-quadrant converter operation, optimally harmonized with the SINAMICS G120, PM240-2 and S120 (ALM, BLM) drive system.
- Degree of protection IP55
- IC411 cooling method, self-ventilated (IC416 cooling method, force-ventilated version optional)
- Housing: Cast iron
- Frame sizes: 80/112 to 200

Benefits

The SIMOTICS GP/SD VSD4000 line has been specifically developed for operation with SINAMICS G120 converters.

- The synchronous-reluctance motors in conjunction with optimized closed-loop control algorithms result in an excellent, loss-optimized operating behavior in the speed control range at full and partial load. This system is superior to an induction motor-based system with comparable nominal efficiencies, especially in the partial load range.
- As a result of their low intrinsic moment of inertia, synchronous-reluctance motors are also especially suitable for operating modes demanding a high dynamic performance.
- Optimizing the assignment of the motor active part to the Power Module results in low capital investment costs.
- The high power density and compact design ensure low space requirements combined with low weight.
- The motors and converters are optimally harmonized and coordinated with one another. It is not therefore necessary to upgrade the power unit.
- SIMOTICS GP motors with aluminum housing or SIMOTICS SD motors with rugged cast-iron housing are available.
- High availability using the standard protection functions for converter operation (KTY84-130 temperature sensors, Pt100/Pt1000 resistance thermometers).
- As a result of the optimized insulation system, a high degree of reliability is obtained for four-quadrant operation with SINAMICS converters.
- Fast and simple commissioning by transferring a motor code into the converter.
- Standard warranty period for synchronous-reluctance motors 36 months.

More power ratings

SIMOTICS GP/SD VSD4000 line motors are designed as standard for operation with a 50-Hz, 60-Hz, and 87-Hz characteristic ²⁾. No special ordering option is required.

Optimized for converter operation

The new motor series has been optimized for operation with SINAMICS G120 converters with regard to converter output currents and voltage utilization. Four-quadrant operation is possible with the SINAMICS G120, PM240-2, and S120 (ALM, BLM) converter families (for line voltages up to 480 V 3 AC).

High degree of flexibility

By consistently utilizing the 1LE1 standard motor platform, almost all options of the 1LE1 line motors can also be used for the SIMOTICS GP/SD VSD4000 line.

Known and established design

Line and converter motors can be easily interchanged due to their identical dimensions and customer interfaces. The connection and operating philosophy is exactly the same as for 1LE1 line motors.

International applications

The motors are not subject to any minimum efficiency requirements for specific countries. As a consequence, they can be operated without additional MEPS certificates, also in the USA, for example.

System components

System components required:

- SIMOTICS 1FP1 synchronous-reluctance motor
- SINAMICS G120 converter PM240-2 Power Module or SINAMICS S120 (ALM, BLM) converter

¹⁾ For the motor type 1FP10 of the SIMOTICS GP series, frame sizes 180 and 200 on request.

²⁾ With firmware V4.7 SP3, only 1500 rpm can be programmed.

SIMOTICS GP/SD VSD4000 line reluctance motors for SINAMICS converters

Orientation

Benefits (continued)

Example configuration SIMOTICS GP/SD VSD4000 with SINAMICS G120

Application

As a result of the wide range of options, the SIMOTICS GP/SD VSD4000 line motor series can be used in all industrial areas and sectors. Paper, steel, energy, chemical, water/waste water are examples of some typical sectors.

Various flange and foot-mounted designs according to EN 60034-7 are available. IP55 is the standard degree of protection (other degrees of protection optionally available).

The wide field of applications that can be addressed includes, for example, the following:

- Pumps
- Fans
- Compressors
- Cranes
- Conveyor belts
- Processing machines that require synchronous operation (e.g. in the textile industry)

Design

The SIMOTICS GP/SD VSD4000 line motors are based on the 1LE1 platform. The basic design of the SIMOTICS GP/SD VSD4000 line motors therefore corresponds to the 1LE1 line motors. The mechanical parts are identical. The motors are adapted to the converter by appropriately dimensioning the active part.

Technical specifications

Overview of technical specifications

This table lists the most important technical specifications.

Type of motor	IEC low-voltage three-phase synchronous-reluctance motors
Connection types	Star/delta connection The connection used depends on the particular load characteristic.
No. of poles	4
Frame sizes	80/112 ... 200
Rated power	4-pole: 0.55 ... 30 kW (50 Hz characteristic); 0.63 ... 34.5 kW (60 Hz characteristic), 0.9 ... 48 kW (87 Hz characteristic)
Frequencies	Characteristics for 50 Hz, 60 Hz and 87 Hz
Versions	Air-cooled, enclosed version • with self ventilation • with forced ventilation (optional) SIMOTICS GP motors in an aluminum version, frame sizes 80/112 ... 200 SIMOTICS SD motors in a cast-iron version, frame sizes 80/112 ... 200
System efficiency	IES2 in accordance with EN 50598 (system with SINAMICS G120 converter, PM240-2)
Marking	Only permitted for converter operation. As converter motors, IE classification according to IEC 60034-30-1 is not required.
Rated speed	1500 rpm, 1800 rpm and 2610 rpm (up to frame size 200) 3000 rpm, 3600 rpm (frame sizes 180 and 200)
Rated torque	3.5 ... 191 Nm (50 Hz characteristic); 3.3 ... 183 Nm (60 Hz characteristic), 3.3 ... 176 Nm (87 Hz characteristic)
Insulation of the stator winding in accordance with EN 60034-1 (IEC 60034-1)	Temperature class F, utilized acc. to B Reinforced insulation system (Advanced)
Degree of protection according to EN 60034-5 (IEC 60034-5)	IP55 as standard Air-cooled, enclosed version
Cooling according to EN 60034-6 (IEC 60034-6)	• Standard: Self-ventilated (IC411) • Optional: Forced-air cooled (IC416) (132 ... 200)
Permissible coolant temperature and installation altitude	–20 ... +40 °C as standard, installation altitude up to 1000 m above sea level
Standard voltages according to EN 60038 (IEC 60038)	50-Hz line supplies: 400 V, 60-Hz line supplies: 480 V The rated motor voltage required is listed in the "Selection and ordering data" for the required motor.
Type of construction according to EN 60034-7 (IEC 60034-7)	• Without flange: IM B3, IM B6, IM B7, IM B8, IM V5, IM V6 • With flange: IM B35, IM V1, IM V3
Paint finish Suitability of paint finish for climate group according to IEC 60721, Part 2-1	As standard: color RAL 7030 stone gray
Vibration severity grade according to EN 60034-14 (IEC 60034-14)	Grade A (normal)
Shaft extension according to DIN 748 (IEC 60072)	Balancing type: half-key balancing as standard
Sound pressure level according to EN ISO 1680 (tolerance +3 dB)	The sound pressure level is listed in the "Selection and ordering data" for the required motor.
Weights	The weight is listed in the "Selection and ordering data" for the required motor.
Modular mounting concept	Optional brake and separately driven fan according to ordering data
Options	See "Article No. supplements and special versions"

SIMOTICS GP/SD VSD4000 line reluctance motors for SINAMICS converters

Example of a SIMOTICS GP VSD4000 line rating plate, 1FP10

Motors specially designed for converter operation

These motors have been specifically designed for converter operation. The catalog data is applicable for operation on the converter of the SINAMICS G120 series (PM240-2/PM240P-2) and SINAMICS S120 (PM240-2 and Booksize Motor Modules).

SINAMICS G120 system requirements:

- SINAMICS G120, PM240-2/PM240P-2 Power Module, CU230P-2 Control Unit
- V4.7.6 and higher
- The converter is operated with a rated pulse frequency of at least 4 kHz.
- The converter can provide the rated voltage as listed in the catalog.

For SINAMICS G120 converters (from firmware version 4.7) the SIMOTICS GP/SD VSD4000 line can be selected in the SINAMICS converter via the STARTER software or the operator panel at the converter (Basic Operator Panel (BOP), Intelligent Operator Panel (IOP)) as motor category and can be addressed using the motor code number.

SINAMICS S120 system requirements:

- SINAMICS S120, PM240-2 Power Module and CU310
- SINAMICS S120 Booksize Motor Module and CU320-2
- FW 4.8 and higher

Rated voltage

The tolerance for the rated voltage is in accordance with EN 60034-1. A rated voltage is not specified. The rated motor voltages are selected so that when operated with a SINAMICS G120 converter, the available voltage is optimally utilized.

Insulation

The motors can be operated with SINAMICS G/S converters up to line voltages of 480 V when the permissible voltage peaks are complied with ($\hat{U}_{LL} \leq 3200 \text{ V}$, $\hat{U}_{LE} \leq 2800 \text{ V}$).

For converter operation with the power ratings specified in the catalog, the motors can be utilized corresponding to thermal class 155 (F) (service factor 1.2).

Preferred supply system configurations are TT systems and TN systems with neutral-point grounding. In the case of a fault when connected to an IT system (ground fault), the insulation is excessively stressed. In this case, the process should be terminated as quickly as possible ($t < 2 \text{ h}$), and the fault re-solved. We do not recommend operation in corner-grounded TN systems.

Noise

The maximum sound pressure levels should be taken from the selection and ordering data.

SIMOTICS GP/SD VSD4000 line reluctance motors for SINAMICS converters

Orientation

Technical specifications (continued)

Separately driven fan

For the technical specifications of the separately driven fans, see page 1/80 "Technical specifications of separately driven fans".

Bearings

For converter operation, as a result of the basic principle employed, electrical bearing stress is created through the bearing lubricant film due to a voltage that is capacitively coupled in.

The physical cause of this is the common-mode voltage at the converter output that is inherent in the control method for a converter:

The sum of the three phase voltages is – in contrast to pure line operation – not equal to zero at every point in time.

In order to apply currents to the motor which are sinusoidal as far as possible (resulting in smoother running, lower oscillation torques, and lower stray losses), a high pulse frequency is required for the converter's output voltage. The related (very steep) switching edges of the converter output voltage (and also, therefore, of the common-mode voltage) cause correspondingly high capacitive currents and voltages on the machine's internal capacitances.

In the worst-case scenario, the capacitive voltage induced via the bearing can lead to random arcing through the bearing lubricating film, thus causing premature bearing aging or damage.

This physical effect, which occurs in isolated cases, has mostly been observed in connection with larger motors.

EMC-compliant installation of the drive system is a basic prerequisite for preventing premature bearing damage via bearing currents.

The most important measures for reducing bearing currents:

- Insulated motor bearing at the NDE

Recommended from frame size 225 and higher:

- Use cables with a symmetrical cable cross-section:

- Preference given to a line supply with isolated neutral point (IT system).
- Using grounding cables with low impedance over a wide frequency range (DC up to approximately 70 MHz): for example, braided copper ribbon cables, HF finely stranded wires.
- Separate HF equipotential-bonding cable between motor housing and driven machine.
- Separate HF equipotential-bonding cable between motor housing and converter PE busbar.
- 360° HF contacting of the cable shield on the motor housing and the converter PE busbar. This can be achieved using EMC screwed glands on the motor side and EMC shield clips on the converter side, for example.

AGMA

SIMOTICS GP/SD VSD4000 line reluctance motors for SINAMICS converters

Orientation

Technical specifications (continued)

Torque limits (continuous duty)

The thermal torque limit characteristics of the SIMOTICS GP/SD VSD4000 line define the maximum load torque for uninterrupted duty (S1) over the complete speed control range. The characteristics are different for all of the cooling methods. The speed control range is limited by the mechanical speed limit, which depends on the motor's mechanical design.

The following statements are valid for the following diagrams:

- Thermally, from $1/10$ of the rated speed up to the full rated speed, the rated torque and the curve of the suitable power unit are possible, utilizing the thermal class 155 (temperature class F).
- At rated speed, SF 1.2 is possible.
- The curves of the next largest power unit and the maximum power curve can be achieved in continuous-operation periodic duty (S6 - x %), and briefly in S9 duty, provided that $P_2(S9) = P_{2N}$ is not exceeded.

Torque limit for SIMOTICS GP/SD VSD4000 line self-ventilated

Power limit for SIMOTICS GP/SD VSD4000 line self-ventilated

Maximum overload torques/thermal limit characteristic

The maximum overload torque output from the motor is defined by the limit characteristic and the available converter output current.

Thermally, the motors can have a continuous overload with service factor 1.2 (SF 1.2). However, in this case, the limit torque characteristic must be observed. The speed control range is limited by the mechanical speed limit, which depends on the motor's mechanical design.

Additional information

Mechanical stress and grease lifetime

When motors are operated at speeds above the rated speed, the mechanical smooth running operation and the bearings are subjected to greater mechanical stress. This reduces the grease lifetime and the bearing lifetime.

Above 100 Hz, the motors must be balanced for twice the rated frequency; it can be expected that the lubrication intervals and bearing lifetime are significantly reduced.

Motor protection

A motor protection function can be implemented using the I^2t sensing function implemented in the converter software. If required, more precise motor protection can be afforded by direct temperature measurement using KTY84 sensors (standard scope of delivery) or PTC thermistors in the motor winding. Some converters from Siemens determine the motor temperature using the resistance of the temperature sensor. They can be set to a required temperature for alarm and tripping. When ordering PTC thermistors or other temperature sensors to monitor the cooling temperature, the KTY84 sensors, otherwise provided as standard, are eliminated. As described above, KTY84 sensors are evaluated in the SINAMICS converters.

Motor connection

When connecting the motors, it is important to consider the restrictions for 1LE1 line motors as well as the maximum conductor cross-sections permitted for the converter.

Operating data for 50 Hz/60 Hz/87 Hz characteristics

SIMOTICS GP/SD VSD4000 line motors are designed for operation with 50-Hz, 60-Hz and 87-Hz characteristics (87-Hz characteristic up to frame size 200).

Operation with the 50-/60-Hz characteristic requires Y (star or wye) connection; operation with the 87-Hz characteristic requires Δ connection.

The corresponding power data are stamped on the rating plate as standard. An ordering option is not required.

Maximum operating speed

The maximum operating speed is limited by the mechanical speed limit of the motors as well as the available converter output frequency.

A significant increase in the sound pressure level can be expected when operating the motor above its rated speed (field weakening range).

Mechanical speed limits SIMOTICS GP/SD VSD4000 line:

International use

As special converter motors, SIMOTICS GP/SD VSD4000 line motors are presently not subject to any minimum efficiency requirements in the EU and USA/Canada. However, other national certificates may be required (e.g. CSA-S safety in Canada).

Operating characteristics of SIMOTICS GP/SD VSD4000 line motors ¹⁾

Note:

The converter recommendation applies to standard ambient conditions (40 °C; 1000 m above sea level).

If, as a result of different ambient conditions, the rated motor power is significantly reduced, under certain circumstances, another converter is the optimum solution. Here, please use the configuration options for converters in the DT Configurator.

System power loss according to EN 50598-2 (draft)

The drive system comprising SIMOTICS GP/SD VSD4000 line synchronous-reluctance motors and SINAMICS G120 converters is, as a result of the minimal system power losses, especially suitable for applications in the full and partial load range that are optimized to achieve minimum lifecycle costs.

General conditions:

- CU230P-2 Control Unit
- Line voltage: 400 V 3 AC 50/60 Hz
- Output voltage: Up to 0.95 x line supply input voltage

- Inverter pulse frequency: 4 kHz to 90 kW; 2 kHz from 110 kW
- In the standby mode, the converter does not supply any power to the motor (the inverter pulses are inhibited)
- In the standby operating mode, the Control Unit is operated from the internal or external 24 V DC electronics power supply
- Converters with vector control for synchronous-reluctance motors and flux reduction
- The operating points defined in the subsequent table already take into account the standby portions

Article number code

Selection and ordering data

The article number consists of a combination of digits and letters and is divided into three hyphenated blocks to provide a better overview, e.g.:

**1FP1504-1DB42-1GF4-Z
H00**

The first block (positions 1 to 7) identifies the motor type. The second block (positions 8 to 12) defines the motor frame size and length, the number of poles and in some cases the frequency/voltage. In the third block (positions 13 to 16), the frequency/voltage, type of construction and further design features are encoded.

For deviations in the second and third block from the catalog codes either **Z** or **90** should be used as appropriate.

Ordering data:

- Complete Article No. and order code(s) or plain text
- If a quotation has been requested, please specify the quotation number in addition to the Article No.
- When ordering a complete motor as a spare part, please specify the works serial No. for the previously supplied motor as well as the Article No.

¹⁾ The types of construction IM B6/7/8, IM V6, and IM V5 with/without protective cover are also possible as long as no condensation drainage holes (order code **H03**) and no stamping of these types of construction on the rating plate are required. As standard the type of construction IM B3 is then stamped on the rating plate. With type of construction IM V5 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.

²⁾ The type of construction is stamped on the rating plate. For orders with condensation drainage holes (order code **H03**), if mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

³⁾ The "Second shaft extension" option (order code **L05**) is not possible.

⁴⁾ In combination with an encoder, it is not necessary to order the protective cover (order code **H00**), as this is delivered as a protection for the encoder as standard. In this case the protective cover is standard version (without additional charge).

⁵⁾ The types of construction IM V3 and IM V1 with/without protective cover are also possible as long as no condensation drainage holes (order code **H03**) and no stamping of these types of construction on the rating plate are required. As standard the type of construction IM B5 is then stamped on the rating plate. With type of construction IM V1 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.

⁶⁾ The types of construction IM V19 and IM V18 with/without protective cover are also possible as long as no condensation drainage holes (order code **H03**) and no stamping of these types of construction on the rating plate are required. As standard the type of construction IM B14 is then stamped on the rating plate. With type of construction IM V18 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.

- Standard version
 ✓ With additional charge
 – Not possible

- ¹⁾ The types of construction IM B6/7/8, IM V6 and IM V5 with/without protective cover are also possible as long as no stamping of these types of construction on the rating plate is required. As standard the type of construction IM B3 is then stamped on the rating plate. With type of construction IM V5 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.
- ²⁾ The type of construction is stamped on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.
- ³⁾ In combination with an encoder, it is not necessary to order the protective cover (order code **H00**), as this is delivered as a protection for the encoder as standard. In this case the protective cover is standard design (without additional charge).

- ⁴⁾ The "Second shaft extension" option (order code **L05**) is not possible.
- ⁵⁾ The types of construction IM V3 and IM V1 with/without protective cover are also possible as long as no stamping of these types of construction on the rating plate is required. As standard the type of construction IM B5 is then stamped on the rating plate. With type of construction IM V1 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.
- ⁶⁾ The types of construction IM V19 and IM V18 with/without protective cover are also possible as long as no stamping of these types of construction on the rating plate is required. As standard the type of construction IM B14 is then stamped on the rating plate. With type of construction IM V18 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.

- Standard version
- Without additional charge
- This order code only determines the price of the version – Additional plain text is required.
- ✓ With additional charge
- O. R. Possible on request
- Not possible

- 1) For order code **H08**, feet dimensions differing from EN 50347. Further information is available in the DT Configurator (see Appendix, "Tools and engineering").
- 2) With IM B5 flange, only possible in combination with order code **H08**.
- 3) The grease lifetime specified in Catalog Section 1 "Introduction" refers to CT 40 °C. If the coolant temperature is increased by 10 K, the grease lifetime and regreasing interval are halved.
- 4) A second shaft extension is not possible. Please inquire for mounted brakes.
- 5) For order codes **F10**, **F11**, and **F12**, the brake supply voltage must be specified or ordered.
- 6) In combination with a separately driven fan (order code **F70**) the 1XP8032-10 rotary pulse encoder is used instead of 1XP8012-10 or 1XP8032-20 is used instead of 1XP8012-20.
- 7) As standard, motors that are prepared for additional mounted components (order codes **G40**, **G41**, **G42**) are shipped without protective cover. If a protective cover is requested as a cover or mechanical protection for mounted components provided by the customer, this can be ordered with order code **G43**. Not possible in combination with order code **L00** vibration severity grade B. In combination with a separately driven fan (order code **F70**) the 1XP8032-10 rotary pulse encoder is used instead of 1XP8012-10 or 1XP8032-20 is used instead of 1XP8012-20.
- 8) Order code **H00** provides mechanical protection for encoders.
- 9) Supplied with the condensation drainage holes sealed at the drive end DE and non-drive end NDE (IP55, IP56, IP65). If the condensation drainage holes are required for motors of the IM B6, IM B7 or IM B8 type of construction (feet on side or top), the motors must be ordered in the respective type of construction and with order code **H03**, so that the condensation drainage holes will be placed in the correct position.
- 10) Not possible in combination with HOG 9 DN 1024 I rotary pulse encoder (order code **G05**) and/or 2LM8 brake (order code **F01**).
- 11) Not possible in combination with 2LM8 brake (order code **F01**).
- 12) As standard, motors that are prepared for additional mounted components (order codes **G40**, **G41**, **G42**) are shipped without protective cover. If a protective cover is requested as a cover or mechanical protection for mounted components provided by the customer, this can be ordered with order code **G43**. Not possible in combination with order code **L00** vibration severity grade B.
- 13) Not possible for type of construction IM V3.
- 14) Not possible when brake is mounted.
- 15) When motors are ordered that have a longer or shorter shaft extension than normal, the required position and length of the feather keyway must be specified in a sketch. It must be ensured that only feather keys in accordance with DIN 6885, Form A are permitted to be used. The feather keyway is positioned centrally on the shaft extension. The length is defined by the manufacturer in accordance with the appropriate standard. Not valid for: Conical shafts, non-standard threaded journals, non-standard shaft tolerances, friction welded journals, extremely "thin" shafts, special geometry dimensions (e.g. square journals), hollow shafts. Valid for non-standard shaft extensions DE or NDE. The feather keys are supplied in every case. For order codes **Y58**, **Y59** and **L05** the following applies:
 - Dimensions D and DA ≤ ball bearing inner diameter (see dimension tables for "Dimensions")
 - Dimensions E and EA ≤ 2 × length E (standard) of the shaft extension. For an explanation of the order codes, see Catalog Section 1 "Introduction".
- 16) The special requirements of the textile industry regarding the sheet metal cover open up the possibility that a finger may be inserted between the cover and housing. The customer must implement appropriate measures to ensure that the installed system is "finger-safe".
- 17) The Operating Instructions (Compact) are available in PDF format for all official EU languages at <http://support.automation.siemens.com/WW/view/en/40761976>
- 18) The delivery time for the factory test certificate may differ from the delivery time for the motor and will be dispatched by e-mail.
- 19) Not UL-certified. Not in combination with option **D31**.
- 20) Not possible in combination with order codes **R70** and **R71**.

SIMOTICS SD VSD4000 line reluctance motors for SINAMICS converters

Article No. supplements and special versions

Options – 1FP15.4 cast-iron series

4

- 1) Evaluation with associated tripping unit (see Catalog IC 10) is recommended.
- 2) For order code **H08**, feet dimensions differing from EN 50347. Further information is available in the DT Configurator (see Appendix, "Tools and engineering").
- 3) The grease lifetime specified in Catalog Section 1 "Introduction" refers to CT 40 °C. If the coolant temperature is increased by 10 K, the grease lifetime and regreasing interval are halved.
- 4) A second shaft extension is not possible. Please inquire for mounted brakes.
- 5) For order codes **F10**, **F11**, and **F12**, the brake supply voltage must be specified or ordered.
- 6) The 1XP8 rotary pulse encoders are fitted with a protective cover as standard. The protective cover is omitted at the factory when a rotary pulse encoder is combined with a separately driven fan, because in this case the rotary pulse encoder is installed under the fan cover.
- 7) In combination with a separately driven fan (order code **F70**) the 1XP8032-10 rotary pulse encoder is used instead of 1XP8012-10 or 1XP8032-20 is used instead of 1XP8012-20.
- 8) LL and HOG rotary pulse encoders up to frame size 160 are fitted with a protective cover as standard. The protective cover is omitted at the factory when a rotary pulse encoder is combined with a separately driven fan, because in this case the rotary pulse encoder is installed under the fan cover.
- 9) Order code **H00** provides mechanical protection for encoders.
- 10) Not possible in combination with HOG 9 DN 1024 I rotary pulse encoder (order code **G05**) and/or brake 2LM8 (order code **F01**).
- 11) Not possible in combination with 2LM8 brake – order code **F01**.
- 12) Not possible for type of construction IM V3.
- 13) In connection with mountings, the respective technical specifications must be observed, please inquire before ordering.
- 14) Up to frame size 160 not possible when brake is mounted.
- 15) When motors are ordered that have a longer or shorter shaft extension than normal, the required position and length of the feather keyway must be specified in a sketch. It must be ensured that only feather keys in accordance with DIN 6885, Form A are permitted to be used. The feather keyway is positioned centrally on the shaft extension. The length is defined by the manufacturer in accordance with the appropriate standard. Not valid for: Conical shafts, non-standard threaded journals, non-standard shaft tolerances, friction welded journals, extremely "thin" shafts, special geometry dimensions (e.g. square journals), hollow shafts. Valid for non-standard shaft extensions DE or NDE. The feather keys are supplied in every case. For order codes **Y58**, **Y59** and **L05** the following applies:
 - Dimensions D and DA ≤ ball bearing inner diameter (see dimension tables for "Dimensions")
 - Dimensions E and EA ≤ 2 × length E (standard) of the shaft extension. For an explanation of the order codes, see Catalog Section 1 "Introduction".
- 16) Wearing parts (bearings) are excluded from the warranty extension.
- 17) The delivery time for the factory test certificate may differ from the delivery time for the motor.
- 18) The Operating Instructions (Compact) are available in PDF format for all official EU languages at <http://support.automation.siemens.com/WW/view/en/10803948/133300>
- 19) Option (encoder mounting) is only possible for motors with a mounted separately driven fan or for naturally cooled motors (without an external fan). This option can be used in combination with brakes of type KFB! This option cannot be used in combination with brakes of type 2LM8!
- 20) Not UL and CSA certified. Not available in combination with order code **D31**.

SIMOTICS GP/SD VSD4000 line reluctance motors for SINAMICS converters

Article No. supplements and special versions

Accessories**Overview*****Slide rails with fixing bolts and tensioning screws according to DIN 42923***

Slide rails are used to tension the belt of a machine easily and conveniently when there is no belt-tensioning pulley. They are fixed to the base using stone bolts or foundation blocks.

The assignment of slide rails to motor size can be found in DIN 42923. For motors of frame sizes 355 to 450, there are no standardized slide rails (please inquire).

Available from:

Lütgert & Co. GmbH
Postfach 42 51
33276 Gütersloh, Germany

Fax +49 (5241) 7407-90

www.luetgert-antriebe.de
Email: info@luetgert-antriebe.de

Foundation block according to DIN 799

The foundation blocks are inserted into the stone foundation and embedded in concrete. They are used for fixing machines of medium size, slide rails, pedestal bearings, base frames, etc. After the fixing bolts have been unscrewed, the machines can be shifted without them having to be lifted.

When the machine is initially installed, the foundation block that is bolted to the machine (without washers) and fitted with taper pins is not embedded with concrete until the machine has been fully aligned. In this case, the machine is positioned 2 to 3 mm lower. The difference in shaft height is compensated by inserting shims on final installation. The taper pins safeguard the exact position of the machine when it is repeatedly removed and replaced without the need for realignment.

Available from:

Lütgert & Co. GmbH

Taper pins according to DIN 258 with threaded ends and constant taper lengths

Taper pins are used for components that are repeatedly removed. The drilled hole is conically ground using a conical reamer until the pin can be pushed in by hand until the cone shoulder lies approx. 3 to 4 mm above the rim of the hole.

It can then be driven in using a hammer until it is correctly seated. The pin is removed from the drilled hole by screwing on the nut and tightening it.

Standardized taper pins are commercially available.

SIMOTICS GP/SD VSD4000 line reluctance motors for SINAMICS converters

Article No. supplements and special versions

Accessories

More information**Replacement motors and repair parts**

- Commitment to provide replacement motors and repair parts following delivery of the motor:
 - for up to 3 years after delivery of the original motor, in the event of total motor failure, Siemens will supply a comparable spare motor with regard to the mounting dimensions and functions (the type series may vary).
 - if a spare motor is provided within the 3-year period, this will not mean that the warranty restarts.
 - Replacement motors delivered after the active production of the machine series are also identified as spare motors on the rating plate.
 - Spare parts are offered only for these spare motors on request; repair and replacement are not possible.
 - after a period of 3 years (after the delivery of the original motor), it is only possible to repair these motors (depending on the availability of the spare parts required).
 - for up to 5 years after the delivery of the original motor, spare parts will be available and for a further 5 years, Siemens will provide information about spare parts and will supply documents when required.

- When repair parts are ordered, the following details must be provided:
 - Designation and part number
 - Article No. and factory number of the motor.
- For bearing types, see Catalog Section 1 "Introduction".
- For standard components, a commitment to supply repaired parts does not apply.
- Support hotline

SIMOTICS GP/SD VSD4000 line reluctance motors for SINAMICS converters

Dimensions

Notes on the dimensions – Dimension sheet generator (part of the DT Configurator)

Overview (continued)

Notes on the dimensions

- Dimensional drawings according to EN 50347 and IEC 60072.
- Fits
The shaft extensions specified in the dimension tables (DIN 748) and centering spigot diameters (EN 50347) are machined with the following fits:

Dimension designation	ISO fit EN ISO 286-2	
D, DA	to 30	j6
	over 30 to 50	k6
	over 50	m6
N	to 250	j6
	over 250	h6
F, FA		h9
K		H17
S	flange (FF)	H17

The drilled holes of couplings and belt pulleys should have an ISO fit of at least H7.

- Dimension tolerances
For the following dimensions, the admissible deviations are given below:

Dimension designation	Dimension	Admissible deviation
H	to 250	– 0.5
	over 250	– 1.0
E, EA		– 0.5

Keyways and feather keyways (dimensions GA, GC, F and FA) are made in compliance with DIN 6885 Part 1.

- All dimensions are specified in mm.

Dimension sheet generator

(part of the DT Configurator)

A dimensional drawing can be created in the DT Configurator for every configurable motor. A dimensional drawing can be requested for every other motor.

When a complete Article No. is entered with or without order codes, a dimensional drawing can be called up under the "Documentation" tab.

These dimensional drawings can be presented in different views and sections and printed.

The corresponding dimension sheets can be exported, saved and processed further in DXF format (interchange/import format for CAD systems) or as bitmap graphics.

Online access in the Siemens Industry Mall

The DT Configurator is integrated in the Siemens Industry Mall and can be used on the Internet without installation.

German: www.siemens.de/dt-konfigurator
English: www.siemens.com/dt-configurator

Offline access in the Interactive Catalog CA 01

The DT Configurator is also integrated on the DVD of the Interactive Catalog CA 01 – the offline version of Siemens Industry Mall. CA 01 can be ordered from the relevant Siemens sales office or via the Internet:

www.siemens.com/automation/CA01

SIMOTICS GP/SD VSD10 line standard motors for converter operation

Orientation

Overview

SIMOTICS GP/SD VSD10 line motor series: 1LE109, 1LE159

SIMOTICS GP/SD VSD10 line motors are suitable for all sectors of industry as a result of their flexibility and the wide range of versions available.

Versions of the

SIMOTICS GP/SD VSD10 line motor series: 1LE109, 1LE159

The motors are squirrel-cage induction motors with compact dimensions in a surface-cooled, enclosed version with self-ventilation. They have been specifically designed for converter operation.

1LE109 General Purpose for converter operation

- Four-quadrant operation with a converter, optimally coordinated to the SINAMICS G drive system. Can be operated with SINAMICS S (ALM, SLM) in four-quadrant operation.
- IP55 degree of protection
- IC411 cooling method, self-ventilated (IC416 cooling method, force-ventilated version optional)
- Housing: Aluminum
- Frame sizes 100 to 160

1LE159 Severe Duty for converter operation

- Four-quadrant operation with a converter, optimally coordinated to the SINAMICS G drive system. Can be operated with SINAMICS S (ALM, SLM) in four-quadrant operation.
- IP55 degree of protection
- IC411 cooling method, self-ventilated (IC416 cooling method, force-ventilated version optional)
- Housing: Cast iron
- Frame sizes 100 to 315

Benefits

The SIMOTICS GP/SD VSD10 line series of motors has been specifically developed for operation with SINAMICS G converters.

- Optimizing the assignment of the motor active part to the Power Module results in low capital investment costs.
- The high power density and compact design ensure low space requirements combined with low weight.
- An optimally harmonized drive system is created as the motor is optimally coordinated and harmonized with the converter. For instance, the converter does not have to be derated or there is low temperature rise.
- Optionally, SIMOTICS GP motors with an aluminum housing (frame sizes 100 to 160) or SIMOTICS SD motors with a rugged cast-iron housing (frame sizes 100 to 315) are available.
- High degree of availability based on standard protection functions for converter operation – KTY 84-130 temperature sensors, Pt1000 resistance thermometers (all frame sizes) and NDE insulated bearings (frame sizes 280 and 315).
- As a result of the optimized insulation system, a high degree of reliability is obtained for four-quadrant operation with SINAMICS converters.
- Fast and simple commissioning by transferring a motor code into the converter.

More power ratings

SIMOTICS GP/SD VSD10 line motors are designed as standard for operation with a 50-Hz, 60-Hz, and 87-Hz characteristic (up to frame size 200). No special ordering option is required.

Optimized for converter operation

The new motor series has been optimized for operation with SINAMICS G120, G130, and G150 converters with regard to converter output currents and voltage utilization. Four-quadrant operation is possible without restrictions with the SINAMICS G120 and SINAMICS S120 converter families. The motors can also be operated on other SINAMICS converters (SINAMICS G120P, SINAMICS G120C, SINAMICS G120D).

High degree of flexibility

By consistently utilizing the 1LE1 standard motor platform, almost all options of the 1LE1 line motors can also be used for the SIMOTICS GP/SD VSD10 line series.

Known and established design

Line and converter motors can be easily interchanged due to their identical dimensions and customer interfaces. The connection and operating philosophy is exactly the same as for 1LE1 line motors.

International applications

The motors are not subject to any minimum efficiency requirements for specific countries. As a consequence, they can be operated without additional MEPS certificates, also in the USA, for example.

1) Forced ventilation optionally available.
2) 87 Hz characteristic not available for all frame sizes.
3) Other degrees of protection optionally available.

SIMOTICS GP/SD VSD10 line standard motors for converter operation

Orientation

Application

As a result of the wide range of options, the SIMOTICS GP/SD VSD10 line motor series can be deployed in all industrial areas and sectors. Paper, steel, energy, chemical, water/waste water are examples of some typical sectors.

Various flange and foot-mounted designs according to EN 60034-7 are available. IP55 is the standard degree of protection (other degrees of protection optionally available).

The wide field of applications that can be addressed includes, for example, the following:

- Pumps
- Fans
- Compressors
- Cranes
- Conveyor belts

Design

The SIMOTICS GP/SD VSD10 line motors are based on the 1LE1 platform. The principle design of the SIMOTICS GP/SD VSD10 line motors therefore corresponds to the 1LE1 line motors. The

mechanical parts are identical. The motors are adapted to the converter by appropriately dimensioning the active part and VSD-specific rating plate data.

Technical specifications

Overview of technical specifications

This table lists the most important technical specifications.

Type of motor	SIMOTICS GP/SD VSD10 line IEC Low-Voltage Motors; three-phase induction motors
Connection types	Star/delta connection The connection used depends on the particular load characteristic.
No. of poles	2, 4
Frame sizes	100 ... 315
Rated power	• 2-pole: 3 ... 90 kW (50 Hz characteristic); 3.45 ... 101 kW (60 Hz characteristic); 4.5 ... 12.5 kW (87 Hz characteristic) • 4-pole: 2.2 ... 200 kW (50 Hz characteristic); 2.55 ... 230 kW (60 Hz characteristic); 3.7 ... 48 kW (87 Hz characteristic)
Frequencies	Characteristics for 50 Hz, 60 Hz and 87 Hz
Versions	Air-cooled, enclosed version • with self ventilation • with forced ventilation (optional) SIMOTICS GP motors in an aluminum version, frame sizes 100 ... 160 SIMOTICS SD motors in a cast-iron version, frame sizes 100 ... 315
Marking	Only permitted for converter operation. As converter motors, IE classification according to IEC 60034-30-1 is not required.
Rated speed	• 1500 rpm, 1800 rpm (up to frame size 315), and 2610 rpm (up to frame size 200) • 3000 rpm, 3600 rpm (up to frame size 280), and 5220 rpm (up to frame size 112)
Rated torque	9.6 ... 1273 Nm (50 Hz characteristic); 9.2 ... 1220 Nm (60 Hz characteristic); 8.2 ... 176 Nm (87 Hz characteristic)
Insulation of the stator winding in accordance with EN 60034-1 (IEC 60034-1)	Temperature class F Reinforced insulation system (Advanced) up to 440 V motor connection voltage Special insulation system (Premium) up to 480 V motor connection voltage
Degree of protection according to EN 60034-5 (IEC 60034-5)	Standard IP55 optionally IP56 and IP65 Air-cooled, enclosed version;
Cooling according to EN 60034-6 (IEC 60034-6)	• Standard: Self-ventilated (IC411) • Optional: Forced-air cooled (IC416)
Permissible coolant temperature and installation altitude	-20 ... +40 °C as standard, installation altitude up to 1000 m above sea level.
Standard voltages according to EN 60038 (IEC 60038)	50 Hz line supplies: 400 V, 500 V, 690 V 60-Hz supply systems: 460 V, 600 V The rated motor voltage required is listed in the "Selection and ordering data" for the required motor.
Type of construction according to EN 60034-7 (IEC 60034-7)	• Without flange: IM B3, IM B6, IM B7, IM B8, IM V5, IM V6 • With flange: IM B5, IM B35, IM V1, IM V3
Paint finish Suitability of paint finish for climate group according to IEC 60721, Part 2-1	As standard: color RAL 7030 stone gray
Vibration severity grade according to EN 60034-14 (IEC 60034-14)	Grade A (normal)
Shaft extension according to DIN 748 (IEC 60072)	Balancing type: half-key balancing as standard
Sound pressure level according to EN ISO 1680 (tolerance +3 dB)	The sound pressure level is listed in the "Selection and ordering data" for the required motor.
Weights	The weight is listed in the "Selection and ordering data" for the required motor.
Modular mounting concept	Optional pulse encoder, brake, and separately driven fan according to ordering data
Options	See "Article No. supplements and special versions"

SIMOTICS GP/SD VSD10 line standard motors for converter operation

Orientation

Technical specifications (continued)

Rating plate

In accordance with EN 60034-1, the approximate total weight is specified on the rating plate. As standard, the rating plate is in English.

For straightforward and fast commissioning with SINAMICS G converters, a motor code number is stamped on the rating plate (CODE). The rated frequencies deviate, depending on the slip, from 50 Hz, 60 Hz, and 87 Hz.

Example of a rating plate for SIMOTICS GP VSD10 line

Motors specially designed for converter operation

These motors have been specifically designed for converter operation. The catalog data apply for operation with Siemens SINAMICS G and SINAMICS S converters.

When operated with an alternative converter, the catalog data apply (thermal torque limits, maximum overload torques), approximately for the following general conditions:

- Minimum rated pulse frequencies:
 - 4 kHz at 400 V, up to 90 kW
 - 2 kHz at 500 V to 690 V, up to 132 kW
 - 1.25 kHz at 500 V to 690 V, 160 and 200 kW
- The converter can provide the rated voltage as listed in the catalog.
- Permissible voltage peaks for reinforced insulation system (Advanced):

$$\hat{U}_{\text{phase-to-phase}} \leq 1600 \text{ V}, \hat{U}_{\text{phase-to-ground}} \leq 1400 \text{ V}, t_s > 0.1 \mu\text{s}$$
- Permissible voltage peaks for special insulation system (Premium):

$$\hat{U}_{\text{phase-to-phase}} \leq 2200 \text{ V}, \hat{U}_{\text{phase-to-ground}} \leq 1500 \text{ V}, t_s > 0.1 \mu\text{s}$$

For SINAMICS G120 converters (from firmware version 4.7 and higher), the SIMOTICS GP/SD VSD10 line can be selected as the motor category and addressed using the motor code No. in the SINAMICS converter using the STARTER software or at the converter operator panel (Advanced Operator Panel (AOP), Basic Operator Panel (BOP)).

Rated voltage

The tolerance for the rated voltage is in accordance with EN 60034-1. A rated voltage is not specified. The rated motor voltages are selected so that when operated with a SINAMICS G120 converter, the available voltage is optimally utilized.

Insulation

The motors can be operated with line voltages up to 690 V 3 AC with SINAMICS G converters and SINAMICS S converters (uncontrolled and controlled infeed) when maintaining the permissible peak voltages specified above.

Depending on the selected motor connection voltage, a special insulation system is used for converter operation.

- Up to 440 V motor voltage (480 V line voltage) reinforced insulation system (Advanced)
- From 480 V motor voltage (500 V line voltage) special insulation system (Premium)

For converter operation with the power ratings specified in the catalog, the motors can be utilized corresponding to thermal class 155 (F) (service factor 1.0).

Preferred supply system configurations are TT systems and TN systems with neutral-point grounding. In the case of a fault when connected to an IT system (ground fault), the insulation is excessively stressed. In this case, the process should be terminated as quickly as possible ($t < 2 \text{ h}$), and the fault resolved. We do not recommend operation in corner-grounded TN systems.

Noise

The maximum sound pressure levels should be taken from the selection and ordering data.

Technical specifications (continued)

Separately driven fan

For the technical specifications of the separately driven fans, see page 1/80 "Technical specifications of separately driven fans".

Bearings

To prevent bearing current damage, converter motors are equipped with insulated bearing cartridges at the NDE, available as standard for frame sizes 280 and 315.

Insulated NDE bearings are optionally available for frame sizes 225 and 250. We recommend their use depending on the particular plant or system.

For converter operation, as a result of the basic principle employed, electrical bearing stress is created through the bearing lubricant film due to a voltage that is capacitively coupled in.

The physical cause of this is the common-mode voltage at the converter output that is inherent in the control method for a converter:

The sum of the three phase voltages is – in contrast to pure line operation – not equal to zero at every point in time.

In order to apply currents to the motor which are sinusoidal as far as possible (resulting in smoother running, lower oscillation torques, and lower stray losses), a high pulse frequency is required for the converter's output voltage. The related (very steep) switching edges of the converter output voltage (and also, therefore, of the common-mode voltage) cause correspondingly high capacitive currents and voltages on the machine's internal capacitances.

In the worst-case scenario, the capacitive voltage induced via the bearing can lead to random arcing through the bearing lubricating film, thus causing premature bearing aging or damage.

This physical effect, which occurs in isolated cases, has mostly been observed in connection with larger motors.

EMC-compliant installation of the drive system is a basic prerequisite for preventing premature bearing damage via bearing currents.

The most important measures for reducing bearing currents:

- Insulated motor bearing at the NDE
- Use cables with a symmetrical cable cross-section:

- Preference given to a line supply with isolated neutral point (IT system).
- Using grounding cables with low impedance over a wide frequency range (DC up to approximately 70 MHz): for example, braided copper ribbon cables, HF finely stranded wires.
- Separate HF equipotential-bonding cable between motor housing and driven machine.
- Separate HF equipotential-bonding cable between motor housing and converter PE busbar.
- 360° HF contacting of the cable shield on the motor housing and the converter PE busbar. This can be achieved using EMC screwed glands on the motor side and EMC shield clips on the converter side, for example.

Orientation

Technical specifications (continued)

Torque limits (continuous duty)

The thermal torque limit characteristics of the SIMOTICS GP/SD VSD10 line define the maximum load torque for uninterrupted duty (S1) over the complete speed control range. The characteristics are different for all of the cooling methods. The speed control range is limited by the mechanical speed limit, which depends on the motor's mechanical design.

Torque limit characteristic for SIMOTICS GP/SD VSD10 line, self-ventilated

Torque limit characteristic for SIMOTICS GP/SD VSD10 line, forced-air cooled

Power limit for SIMOTICS GP/SD VSD10 line, self-ventilated

Power limit for SIMOTICS GP/SD VSD10 line, forced-air cooled

Maximum overload torques

The maximum overload torque output from the motor is defined by the overload torque characteristic over the complete speed control range. The reference variable is the breakdown torque at rated speed. The breakdown torque is calculated from the breakdown torque ratio and the rated torque. Operation at the maximum overload torque is only briefly permissible, for instance, when accelerating. The speed control range is limited by the mechanical speed limit, which depends on the motor's mechanical design.

Overload torque characteristic for SIMOTICS GP/SD VSD10 line

Technical specifications (continued)

Additional information

Mechanical stress and grease lifetime

When motors are operated at speeds above the rated speed, the mechanical smooth running operation and the bearings are subjected to greater mechanical stress. This reduces the grease lifetime and the bearing lifetime.

Above 100 Hz, the motors must be balanced for twice the rated frequency.

Motor protection

A motor protection function can be implemented using the Pt sensing function implemented in the converter software. If required, more precise motor protection can be afforded by direct temperature measurement using KTY84 sensors, PTC thermistors, or Pt100/1000 resistance thermometers in the motor winding. Some converters from Siemens determine the motor temperature using the resistance of the temperature sensor. They can be set to a required temperature for alarm and tripping. When ordering PTC thermistors, Pt100 resistance thermistors or other temperature sensors to monitor the cooling temperature, the KTY84 sensors, otherwise provided as standard, are omitted. As described above, KTY84 sensors are evaluated in the SINAMICS converters.

Motor connection

When connecting the motors, it is important to consider the restrictions for 1LE1 line motors as well as the maximum conductor cross-sections permitted for the converter.

Operating data for 50 Hz/60 Hz/87 Hz characteristics

SIMOTICS GP/SD VSD10 line motors are designed for operation with 50-Hz, 60-Hz and 87-Hz characteristics (87-Hz characteristic up to frame size 200).

Operation with the 50-/60-Hz characteristic requires Y (star or wye) connection; operation with the 87-Hz characteristic requires Δ connection.

The corresponding power data are stamped on the rating plate as standard. An ordering option is not required.

Operating characteristics of SIMOTICS GP/SD VSD10 line motors

Maximum operating speed

The maximum operating speed is limited by the mechanical speed limit of the motors as well as the available converter output frequency.

A significant increase in the sound pressure level can be expected when operating the motor above its rated speed (field weakening range).

Mechanical speed limits SIMOTICS GP/SD VSD10 line:

Frame size	Mechanical speed limits for 1LE1.92 motors	
	2-pole	4-pole
	n_{max} rpm	n_{max} rpm
100	5500	4200
112	5500	4200
132	4500	4200
160	4500	4200
180	4500	4200
200	4500	4200
225	4500	4500
250	3900	3700
280	3600	3000
315	–	2600

International use:

As special converter motors, SIMOTICS GP/SD VSD10 line motors are presently not subject to any minimum efficiency requirements in the EU and USA/Canada. However, other national certificates may be required (e.g. CSA-S safety in Canada).

Therefore, for use in USA, Canada and Mexico, we recommend:

Ordering with order code **D39** (version according to UL and CSA-S).

Note:

At the present time, national Chinese regulations regarding converter motors are being revised. A conclusive interpretation relating to the design still cannot be made. As a consequence, until further notice, for China we recommend that line motors suitable for converter operation are used with CEL (China Energy Label) (e.g. 1LE100, with order code **D34**)

Note:

The converter recommendation applies to standard ambient conditions (40 °C; 1000 m above sea level).

If, as a result of different ambient conditions, the rated motor power is significantly reduced, under certain circumstances, another converter is the optimum solution. Here, please use the configuration options for converters in the DT Configurator.

¹⁾ Output frequency, rel. [%] referred to the rated speed/
Torque, rel. [%] referred to the rated torque T_{rated} .

SIMOTICS GP/SD VSD10 line standard motors for converter operation

Orientation

Article number code

Selection and ordering data

The article number consists of a combination of digits and letters and is divided into three hyphenated blocks to provide a better overview, e.g.:

1LE1592-1DB42-1GF4-Z
H00

The first block (positions 1 to 7) identifies the motor type. The second block (positions 8 to 12) defines the motor frame size and length, the number of poles and in some cases the frequency/voltage. In the third block (positions 13 to 16), the frequency/voltage, type of construction and further design features are encoded.

For deviations in the second and third block from the catalog codes either **Z** or **90** should be used as appropriate.

Ordering data:

- Complete Article No. and order code(s) or plain text
- If a quotation has been requested, please specify the quotation number in addition to the Article No.
- When ordering a complete motor as a spare part, please specify the works serial No. for the previously supplied motor as well as the Article No.

Structure of the Article No.:		Position:	1	2	3	4	5	6	7	-	8	9	10	11	12	-	13	14	15	16
1st to 4th position:	Self-ventilated by fan mounted on and driven by the rotor		1	L	E	1														
Digit, letter, letter, digit																				
5th position:	SIMOTICS GP – aluminum housing						0													
Digit	SIMOTICS SD – cast-iron housing						5													
6th position:	VSD10 line motor (motor for converter operation)							9												
Digit																				
7th position:	Standard efficiency class								2											
Digit																				
8th and 9th position:	Motor frame size										1	A								
Digit, letter	(frame size as a combination of shaft height and overall length, encoded)										...	...								
											3	D								
10th position:	No. of poles													A						
Letter	A: 2-pole B: 4-pole													B						
11th position:	Laminated core length														0					
Digit															1					
															2					
															3					
															4					
															5					
12th and 13th position:	Voltage and frequency ¹⁾																			
2 digits	380 V 3 AC, 50 Hz/440 V 3 AC, 60 Hz/380 V 3 AC, 87Hz														2		1			
	480 V 3 AC, 50 Hz/550 V 3 AC, 60 Hz/480 V 3 AC, 87Hz														2		6			
	660 V 3 AC, 50 Hz/660 V 3 AC, 87 Hz														3		3			
	Non-standard winding, requires order code M.. (e.g. M1Y)														9		0			
14th position:	Type of construction																	A		
Letter	(encoded with A ... V)																	...	V	
15th position:	Motor protection																		B	
Letter	(encoded with B ... Z; Z requires order code Q.. (e.g. Q3A); F = standard version with integrated KTY 84 temperature sensor)																		...	Z
16th position:	Terminal box position																			4
Digit	4: Terminal box top (normal version), 5: Terminal box right, 6: Terminal box left																		...	6
	Special order versions: encoded – additional short code required not encoded – additional plain text required																			- Z

¹⁾ Depending on slip, the rated frequency is above 50 Hz, 60 Hz or 87 Hz (see Technical specifications).

¹⁾ The types of construction IM B6/7/8, IM V6 and IM V5 with/without protective cover are also possible as long as there are no condensation drainage holes (order code **H03**) and these types of construction do not have to be stamped on the rating plate. As standard the type of construction IM B3 is then stamped on the rating plate. With type of construction IM V5 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.

²⁾ The type of construction is stamped on the rating plate. For orders with condensation drainage holes (order code **H03**), if mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

³⁾ The "Second shaft extension" option (order code **L05**) is not possible.

⁴⁾ In combination with an encoder, it is not necessary to order the protective cover (order code **H00**), as this is delivered as a protection for the encoder as standard. In this case the protective cover is standard version (without additional charge).

⁵⁾ Not possible for forced-air cooled motors with order code **F90** without external fan and fan cover.

⁶⁾ The types of construction IM V3 and IM V1 with/without protective cover are also possible as long as there are no condensation drainage holes (order code **H03**) and these types of construction do not have to be stamped on the rating plate. As standard the type of construction IM B5 is then stamped on the rating plate. With type of construction IM V1 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.

⁷⁾ The types of construction IM V19 and IM V18 with/without protective cover are also possible as long as there are no condensation drainage holes (order code **H03**) and these types of construction do not have to be stamped on the rating plate. As standard the type of construction IM B14 is then stamped on the rating plate. With type of construction IM V18 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.

- Standard version
 ✓ With additional charge
 – Not possible

- 1) The types of construction IM B6/7/8, IM V6 and IM V5 with/without protective cover are also possible as long as no stamping of these types of construction on the rating plate is required. As standard the type of construction IM B3 is then stamped on the rating plate. With type of construction IM V5 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.
- 2) The type of construction is stamped on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.
- 3) In combination with an encoder, it is not necessary to order the protective cover (order code **H00**), as this is delivered as a protection for the encoder as standard. In this case the protective cover is standard design (without additional charge).

- 4) The "Second shaft extension" option (order code **L05**) is not possible.
- 5) The types of construction IM V3 and IM V1 with/without protective cover are also possible as long as no stamping of these types of construction on the rating plate is required. As standard the type of construction IM B5 is then stamped on the rating plate. With type of construction IM V1 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.
- 6) The types of construction IM V19 and IM V18 with/without protective cover are also possible as long as no stamping of these types of construction on the rating plate is required. As standard the type of construction IM B14 is then stamped on the rating plate. With type of construction IM V18 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.

- Standard version
- Without additional charge
- This order code only determines the price of the version – Additional plain text is required.
- ✓ With additional charge
- O. R. Possible on request
- Not possible

1) For order code **H08** mounting feet dimension deviates from EN 50347. Further information is available in the DT Configurator (see Appendix, "Tools and engineering").

2) With IM B5 flange, only possible in combination with order code **H08**.

3) The grease lifetime specified in Catalog Section 1 "Introduction" refers to CT 40 °C. If the coolant temperature is increased by 10 K, the grease lifetime and regreasing interval are halved.

4) A second shaft extension is not possible. Please inquire for mounted brakes.

5) For order codes **F10**, **F11**, and **F12**, the brake supply voltage must be specified or ordered.

6) In combination with a separately driven fan (order code **F70**) the 1XP8032-10 rotary pulse encoder is used instead of 1XP8012-10 or 1XP8032-20 is used instead of 1XP8012-20.

7) As standard, motors that are prepared for additional mounted components (order codes **G40**, **G41**, **G42**) are shipped without protective cover. If a protective cover is requested as a cover or mechanical protection for mounted components provided by the customer, this can be ordered with order code **G43**. In combination with a separately driven fan (order code **F70**) the 1XP8032-10 rotary pulse encoder is used instead of 1XP8012-10 or 1XP8032-20 is used instead of 1XP8012-20.

8) Order code **H00** provides mechanical protection for encoders.

9) Supplied with the condensation drainage holes sealed at the drive end DE and non-drive end NDE (IP55, IP56, IP65). If the condensation drainage holes are required for motors of the IM B6, IM B7 or IM B8 type of construction (feet on side or top), the motors must be ordered in the respective type of construction and with order code **H03**, so that the condensation drainage holes will be placed in the correct position.

10) Not possible in combination with HOG 9 DN 1024 I rotary pulse encoder (order code **G05**) and/or brake 2LM8 (order code **F01**).

11) Not possible in combination with 2LM8 brake (order code **F01**).

12) As standard, motors that are prepared for additional mounted components (order codes **G40**, **G41**, **G42**) are shipped without protective cover. If a protective cover is requested as a cover or mechanical protection for mountings provided by the customer, this can be ordered with order code **G43**.

13) Not possible for type of construction IM V3.

14) Not possible when a brake is mounted.

15) When motors are ordered that have a longer or shorter shaft extension than normal, the required position and length of the feather keyway must be specified in a sketch. It must be ensured that only feather keys in accordance with DIN 6885, Form A are permitted to be used. The feather keyway is positioned centrally on the shaft extension. The length is defined by the manufacturer in accordance with the appropriate standard. Not valid for: Tapered shafts, non-standard threaded journals, non-standard shaft tolerances, friction welded journals, extremely "thin" shafts, special geometry dimensions (e.g. square journals), hollow shafts. Valid for non-standard shaft extensions DE or NDE. The feather keys are supplied in every case. For order codes **Y58**, **Y59** and **L05** the following applies:
 - Dimensions D and DA ≤ ball bearing inner diameter (see dimension tables for "Dimensions")
 - Dimensions E and EA ≤ 2 × length E (standard) of the shaft extension. For an explanation of the order codes, see Catalog Section 1 "Introduction".

16) The special requirements of the textile industry regarding the sheet metal cover open up the possibility that a finger may be inserted between the cover and housing. The customer must implement appropriate measures to ensure that the installed system is "finger-safe".

17) The Operating Instructions (compact) are available in PDF format for all official EU languages at <http://support.automation.siemens.com/WW/view/en/40761976>.

18) The delivery time for the factory test certificate may differ from the delivery time for the motor and will be dispatched by e-mail.

19) In connection with mountings, the respective technical specifications must be observed, please inquire before ordering.

20) Not possible in combination with UL.

SIMOTICS SD VSD10 line standard motors for converter operation

Article No. supplements and special versions

Options – 1LE1592 cast-iron series

4

- 1) Evaluation with associated tripping unit (see Catalog IC 10) is recommended.
- 2) For order code **H08** mounting feet dimension deviates from EN 50347. Further information is available in the DT Configurator (see Appendix, "Tools and engineering").
- 3) The grease lifetime specified in Catalog Section 1 "Introduction" refers to CT 40 °C. If the coolant temperature is increased by 10 K, the grease lifetime and regreasing interval are halved.
- 4) A second shaft extension is not possible. Please inquire for mounted brakes.
- 5) For order codes **F10**, **F11**, and **F12**, the brake supply voltage must be specified or ordered.
- 6) The 1XP8 rotary pulse encoders are fitted with a protective cover as standard. The protective cover is omitted at the factory when a rotary pulse encoder is combined with a separately driven fan, because in this case the rotary pulse encoder is installed under the fan cover.
- 7) In combination with a separately driven fan (order code **F70**) the 1XP8032-10 rotary pulse encoder is used instead of 1XP8012-10 or 1XP8032-20 is used instead of 1XP8012-20.
- 8) LL and HOG rotary pulse encoders up to frame size 160 are fitted with a protective cover as standard. The protective cover is omitted at the factory when a rotary pulse encoder is combined with a separately driven fan, because in this case the rotary pulse encoder is installed under the fan cover.
- 9) Option (encoder mounting) is only possible for motors with a mounted separately driven fan or for naturally cooled motors (without an external fan). This option can be used in combination with brakes of type KFB. This option cannot be used in combination with brakes of type 2LM8.
- 10) Order code **H00** provides mechanical protection for encoders.
- 11) Not possible in combination with HOG 9 DN 1024 I rotary pulse encoder (order code **G05**) and/or brake 2LM8 (order code **F01**).
- 12) Not possible in combination with 2LM8 brake (order code **F01**).
- 13) Not possible for type of construction IM V3.
- 14) In connection with mountings, the respective technical specifications must be observed, please inquire before ordering.
- 15) Up to frame size 160 not possible when brake is mounted.
- 16) Standard version for motors from frame size 280 and higher.
- 17) When motors are ordered that have a longer or shorter shaft extension than normal, the required position and length of the feather keyway must be specified in a sketch. It must be ensured that only feather keys in accordance with DIN 6885, Form A are permitted to be used. The feather keyway is positioned centrally on the shaft extension. The length is defined by the manufacturer in accordance with the appropriate standard. Not valid for: Conical shafts, non-standard threaded journals, non-standard shaft tolerances, friction welded journals, extremely "thin" shafts, special geometry dimensions (e.g. square journals), hollow shafts. Valid for non-standard shaft extensions DE or NDE. The feather keys are supplied in every case. For order codes **Y58**, **Y59** and **L05** the following applies:
 - Dimensions D and DA ≤ ball bearing inner diameter (see dimension tables for "Dimensions")
 - Dimensions E and EA ≤ 2 × length E (standard) of the shaft extension.
 For an explanation of the order codes, see Catalog Section 1 "Introduction".
- 18) Wearing parts (bearings) are excluded from the warranty extension.
- 19) The delivery time for the factory test certificate may differ from the delivery time for the motor.
- 20) The Operating Instructions (Compact) are available in PDF format for all official EU languages at <http://support.automation.siemens.com/WW/view/en/10803948/133300>.
- 21) Not possible in combination with UL.

Accessories

Overview

Slide rails with fixing bolts and tensioning screws according to DIN 42923

Slide rails are used to tension the belt of a machine easily and conveniently when there is no belt-tensioning pulley. They are fixed to the base using stone bolts or foundation blocks.

The assignment of slide rails to motor size can be found in DIN 42923. For motors of frame sizes 355 to 450, there are no standardized slide rails (please inquire).

Available from:

Lütgert & Co. GmbH
Postfach 42 51
33276 Gütersloh, Germany
Phone +49 (5241) 7407-0
Fax +49 (5241) 7407-90

www.luetgert-antriebe.de
Email: info@luetgert-antriebe.de

Foundation block according to DIN 799

The foundation blocks are inserted into the stone foundation and embedded in concrete. They are used for fixing machines of medium size, slide rails, pedestal bearings, base frames, etc. After the fixing bolts have been unscrewed, the machines can be shifted without them having to be lifted.

When the machine is initially installed, the foundation block that is bolted to the machine (without washers) and fitted with taper pins is not embedded with concrete until the machine has been fully aligned. In this case, the machine is positioned 2 to 3 mm lower. The difference in shaft height is compensated by inserting shims on final installation. The taper pins safeguard the exact position of the machine when it is repeatedly removed and replaced without the need for realignment.

Taper pins according to DIN 258 with threaded ends and constant taper lengths

Taper pins are used for components that are repeatedly removed. The drilled hole is conically ground using a conical reamer until the pin can be pushed in by hand until the cone shoulder lies approx. 3 to 4 mm above the rim of the hole.

It can then be driven in using a hammer until it is correctly seated. The pin is removed from the drilled hole by screwing on the nut and tightening it.

Standardized taper pins are commercially available.

For instance, available from:

Couplings

The motor from Siemens is connected to the machine or gear unit through a coupling. Siemens is an important coupling manufacturer with a wide range of products.

For standard applications, Siemens recommends that flexible couplings, types N-EUPEX and RUPEX or torsionally rigid couplings, types ARPEX and ZAPEX are used. For special applications, FLUDEX and ELPEX-S couplings are recommended.

Accessories**More information****Replacement motors and repair parts**

- Commitment to provide replacement motors and repair parts following delivery of the motor:
 - For up to 3 years after delivery of the original motor, in the event of total motor failure, Siemens will supply a comparable spare motor with regard to the mounting dimensions and functions (the type series may vary).
 - If a spare motor is provided within the 3-year period, this will not mean that the warranty restarts.
 - Replacement motors delivered after the active production of the machine series are also identified as spare motors on the rating plate.
 - Spare parts are offered only for these spare motors on request; repair and replacement are not possible.
 - After a period of 3 years (after the delivery of the original motor), it is only possible to repair these motors (depending on the availability of the spare parts required).
 - For up to 5 years after the delivery of the original motor, spare parts will be available and for a further 5 years, Siemens will provide information about spare parts and will supply documents when required.

- When repair parts are ordered, the following details must be provided:
 - Designation and part number
 - Article No. and factory number of the motor.
- For bearing types, see Catalog Section 1 "Introduction".
- For standard components, a commitment to supply repaired parts does not apply.
- Support hotline

Orientation

SIMOTICS XP 1MB1 explosion-proof motors

Overview

In many industrial and public sectors, explosion protection or explosion hazards are ever-present, e.g. in the chemicals industry, in refineries, on drilling platforms, at gas stations, in feed manufacturing and in sewage treatment plants.

The risk of explosion is always present when gases, fumes, mist or dust are mixed with oxygen in the air in an explosive ratio close to sources of ignition that are able to release the so-called minimum ignition energy.

In the chemical and petrochemical industries in particular, when crude oil and natural gas are transported, or in mining, milling (e.g. grain and granular solids), this can result in serious injury to persons and damage to equipment.

To ensure maximum safety in these areas, legislators in most countries have implemented appropriate stipulations in the form of laws and regulations based on national and international standards.

Explosion-protected equipment is designed such that an explosion can be prevented when it is used properly.

The explosion-protected equipment can be designed in accordance with various types of protection.

The local conditions must be subdivided into specified zones by the user with the assistance of the responsible authorities in accordance with the frequency of occurrence of an explosion hazard. Device (equipment) categories are assigned to these zones. The zones are then subdivided into possible types of protection and therefore into possible equipment (product) types.

Classification of zones

Areas subject to explosion hazard are divided into zones. Division into zones depends on the chronological and geographical probability of the presence of a hazardous, potentially explosive atmosphere. Information and specifications for classification of the zones are laid down in the following standards:

- IEC/EN 60079-10-1 for gas atmospheres
- IEC/EN 60079-10-2 for dust atmospheres

Further, a distinction is made between various explosion groups as well as temperature classes and these are included in the hazard assessment.

Depending on the particular zone and therefore the associated hazard, operating equipment must comply with defined minimum requirements regarding the type of protection. The different types of protection require corresponding measures to prevent ignition that should be implemented at the motor in order to prevent a surrounding explosive atmosphere from being ignited.

Note:

According to the IEC/EN 60079-7:2015 standard, the previous designations of the types of protection Ex e and Ex nA have been changed to **Ex eb** and **Ex ec**. Expiration date of the previous designations is the 07/31/2018.

Zone	Gas	Dust	Zone definition acc. to	Assigned types of protection	Category according to 2014/34/EU	Equipment protection level acc. to IEC/EN 60079-0
	1) 2)	1) 2)	IEC/EN 60079-10-1 for gas atmospheres IEC/EN 60079-10-2 for dust atmospheres			
0	–	–	An area in which there is an explosive gas atmosphere constantly, over a long period or frequently .	Low voltage motors not permitted	1	Ga
1	–	–	An area in which it is expected that an explosive gas atmosphere will occur occasionally during normal operation.	Ex eb, Ex de, Ex d	2	Gb
2	–	–	An area in which it is expected that an explosive gas atmosphere will occur only rarely and then only briefly during normal operation.	Ex ec	3	Gc
–	20	–	An area in which there is an explosive gas atmosphere comprising a dust-air mixture constantly, over a long period or frequently .	Low voltage motors not permitted	1	Da
–	21	–	An area in which it is expected that an explosive gas atmosphere comprising a dust-air mixture will occur occasionally during normal operation.	Ex tb	2	Db
–	22	–	An area in which it is expected that an explosive gas atmosphere in the form of a cloud of flammable dust in air will occur only rarely and then only briefly during normal operation.	Ex tc ³⁾	3	Dc

1) Motors of
 - Zone 1 can also be used in Zone 2
 - Zone 21 can also be used in Zone 22

2) Motors which are certified for gas or dust protection must not be used in hybrid mixtures! Hybrid mixtures: When explosive gas and dust atmospheres occur simultaneously.

3) Ex tc motors are not approved for operation in environments containing conductive dust.

Overview (continued)**Types of protection**

Type of protection "Increased safety" **Ex eb** acc. to IEC/EN 60079-7

Additional measures are taken to prevent the possibility of high temperatures and to prevent sparks or arcs from occurring on the inside and on external components of the motor.

Motors of the 1MA6 and 1MA7 series are designed with "Increased safety" – see Catalog D 81.1 · July 2011.

Type of protection "Explosion-proof enclosure" **Ex d** acc. to IEC/EN 60079-1

The components that can ignite an explosive atmosphere are located in a housing that is not damaged by an internal explosion and flameproof joints prevent flames from escaping to the explosive atmosphere on the outside.

The motors in series 1MD5 and 1PS5 are designed with "Explosion-proof housing" **Ex d** – see Catalog D 83.1.

Type of protection "Non-sparking" **Ex ec** acc. to IEC/EN 60079-15

The type of protection **Ex ec** ensures that a motor in normal operation as well as when operated under deviating conditions as specified in the standard is not able to ignite a surrounding explosive gas atmosphere.

1MB103, 1MB153 and 1MB163 motors are available in the **Ex ec** version. For motors of the 1LA7/9, 1LA6 and 1LG series, see Catalog D 81.1 · July 2011.

Certification

IEC motors for use in hazardous zones are certified according to the EU Directive 2014/34/EU (ATEX) and are marked according to the following schematic:

Example "Non-sparking":

Example "Non-sparking":												CE	0158		II	3	G	Ex	ec	IIC	T3	Gc
CE marking																						
Number of the certifying "notified" body (0158 = EXAM)																						
Explosion protection marking																						
Device group:												I = Underground II = All other areas										
Category:												2 (Zone 1/21) 3 (Zone 2/22)										
Ex atmosphere												G = Gas D = Dust										
Explosion protected equipment																						
Type of protection nA, d, de, e, tb or tc (de = Ex d motor housing with Ex eb terminal box)																						
Explosion group and explosion subgroup												II = Gas (IIA, IIB or IIC) III = Dust (IIIA, IIIB or IIIC)										
Temperature class with max. surface temperature																						
T1 = 450 °C												T4 = 135 °C										
T2 = 300 °C												T5 = 100 °C										
T3 = 200 °C												T6 = 85 °C										
Equipment protection level (G = Gas; D = Dust):																						
Ga = Very high protection,												Da = Very high protection,										
Gb = High protection,												Db = High protection,										
Gc = Increased protection,												Dc = Increased protection										

Additional information on the subject of explosion protection, types of protection and zones is provided in the Siemens brochure "Explosion Protection".

- ¹⁾ Highest explosion group IIC includes IIB and IIA.
IIIA stands for lint, IIIB for non-conductive dust and IIIC for conductive dust. 1MD5/1PS5 optionally with Ex d terminal box.
- ²⁾ 1PQ8 not possible for Zone 21. Zones 2 and 22 for 1PQ8 available on request. Utilization according to temperature class 155 (F).
- ³⁾ See EU type-examination certificate.
- ⁴⁾ 1LA8 only available for Zone 22 (order codes **M35**, **M39**).
Converter: Utilization as standard according to temperature class 155 (F)

- ⁵⁾ The Ex motor is not admissible in an explosive atmosphere of dust and air (hybrid). A standard is not currently available that describes the product requirements for a hybrid mixture.
- ⁶⁾ For 1MB1
IE1: T140 °C
IE2: T120 °C (except T130 °C for 1MB1.11-1AD5,
1MB1.11-3AD6, 1MB1.21-1AD5 and 1MB1.21-3AD6)
IE3: T120 °C

Benefits

The explosion-proof motors from Siemens offer the user numerous advantages:

- The motors are designed in accordance with Directive 2014/34/EU. As product supplier, Siemens accepts responsibility for compliance with the applicable product standards for the selected equipment.
- By using this product, the plant operating company satisfies Directive 1999/92/EC in accordance with Appendix II B (ATEX 137 previously ATEX 118a). The plant manufacturer or plant operating company is responsible for correct selection and proper usage of the equipment.
- Comprehensive series of Ex motors for protection against gas and dust.
- Individual versions of motors are possible thanks to the numerous catalog options.
- Further special versions are possible on request.
- Factory certificates 2.1 are available for a defined spectrum of Siemens motors/converters.
- The Operating Instructions (Compact) are available in all 23 official EU languages as well as Russian and Chinese.

For applications in harsh environments: SIMOTICS XP motors with a cast-iron housing

The right motor for various challenges

The following motor series are available with cast-iron housings for applications in harsh, hazardous environments:

- **Basic Line:** rugged, reliable motors for machine construction
- **Performance Line:** Motors for the process industry with reinforced bearings and a more rugged coating – for requirements that extend beyond the Basic Line

Comparison: Basic Line versus Performance Line

	Basic Line – 1MB15	Performance Line – 1MB16
Bearing size	62 (63 from frame size 280 upwards)	63
Relubrication	Optional (standard from frame size 280 upwards)	Standard from frame size 160 upwards (optional for frame size 100 to 132)
Paint system	Standard coating, corrosion class C2	Special coating, corrosion class C3
Motor protection	Optional	PTC
Warranty	12 months	36 months

Application

The explosion-proof motors are used in the following sectors to prevent explosion hazards that result in serious injury to persons and severe damage to equipment.

- Chemical and petrochemical industry
- Production of mineral oil and gas
- Gas works
- Gas supply companies
- Petrol stations
- Coking plants
- Mills (e.g. grain, solids)
- Sewage treatment plants
- Wood processing (e.g. sawdust, tree resin)
- Other industries subject to explosion hazards

Orientation

SIMOTICS XP 1MB1 explosion-proof motors

Technical specifications

General information

Ex motors are suitable for operation in electrical power systems with a voltage tolerance of $\pm 10\%$.

Ex motors in vertical type of construction with shaft extension pointing down must have a protective cover.

Operating Instructions (Compact) are supplied as standard with explosion-proof motors in English and German. Translations are also available in all the other official EU languages as well as in Russian and Chinese.

For all explosion-proof motors, designs according to UL and CSA are not possible.

Motor connection

Certified metric cable glands/sealing plugs are included in the scope of supply of 1MB1 motors.

The certificates for the motors for hazardous areas are stored with the documentation in the "DT Configurator".

Certified motor protection switches/tripping units must always be used for motor protection, see Catalog IC 10.

Zone 1 with type of protection Ex eb II increased safety "e"

See Catalog D 81.1 · July 2011.

Zone 1 with type of protection Ex de IIC explosion-proof enclosure "d"

See Catalog D 83.1.

Type of protection Ex ec for use in Zone 2

- Standard version for paint film thicknesses $< 200\ \mu\text{m}$ Ex ec IIC T3 Gc. For further information about paint and paint film thicknesses, see Chapter 1, from Page 1/21 onwards.
- Optional version for paint film thicknesses $> 200\ \mu\text{m}$ to $< 2\ \text{mm}$ Ex ec IIB T3 Gc (order code **B31**). For further information about paint and paint film thicknesses, see Chapter 1, from Page 1/21 onwards.

1MB1, 1LA or 1LG motors are modified for this purpose in the "non-sparking" version and are suitable for use in hazardous areas of Zone 2 for temperature classes T1 to T3. The maximum surface temperature that can occur during operation must lie below the limit temperature of the respective temperature class. The ventilation system must be in accordance with IEC/EN 60079-0. The motors are equipped with an external grounding terminal. The terminal box is similar to the Ex eb design.

Please inquire in the case of:

- Utilization according to temperature class 155 (F)
- For pole-changing versions

For motors in the "non-sparking" version, a type-examination certificate is available from a recognized testing authority.

Ambient temperature

- Standard: -20 to $+40\ ^\circ\text{C}$
- Optional: -40 to $+40\ ^\circ\text{C}$ (order code **D03**)
- Optional: -20 to $+60\ ^\circ\text{C}$ (order codes **N05, N06, N07, N08**)

From $40\ ^\circ\text{C}$, the power is reduced.

Other temperatures are available on request.

The rating plate or the additional rating plate contains the text:

 II 3G Ex ec IIC T3 Gc
and number of the "type test certificate"

¹⁾ Zone 21 only up to frame size 315 L.

²⁾ Zone 21 includes conductive and non-conductive dust.

³⁾ IE1: $T_{140}\ ^\circ\text{C}$
IE2: $T_{120}\ ^\circ\text{C}$ (except $T_{130}\ ^\circ\text{C}$ for 1MB1.11-1AD5, 1MB1.11-3AD6, 1MB1.21-1AD5 and 1MB1.21-3AD6)
IE3: $T_{120}\ ^\circ\text{C}$

Type of protection Ex tb IIIC and Ex tc IIIB for use in Zones 21 and 22

The distinction between Zones 21 and 22 is as follows:

- Ex tb IIIC acc. to IEC/EN 60079-31 ¹⁾ for Zone 21
- Version for Zone 21 ²⁾, as well as Zone 22 for conductive dust (IP65) and line operation (1MB101, 1MB151, 1MB161)
- Ex tc IIIB acc. to IEC/EN 60079-31 ¹⁾ for Zone 22
- Version for Zone 22 for non-conductive dust (IP55) and line operation (1MB102, 1MB152, 1MB162)

The 1MB1 motors are modified for this purpose for use in zones subject to dust explosion hazards. The surface temperature is $\leq 120\ ^\circ\text{C}$ for rated operation ³⁾.

An external grounding terminal and a metal external fan are fitted to the motors.

Pole-changing versions are not possible for Zone 21 – they are possible for Zone 22 on request.

Certification:

- Zone 21: EU type-examination certificate (ATEX) and EU Declaration of Conformity
- Zone 22: EU type-examination certificate and EU Declaration of Conformity

Identification on the rating plate:

- Zone 21:  II 2D Ex tb IIIC $T_{120}\ ^\circ\text{C}$ Db ³⁾
- Zone 22:  II 3D Ex tc IIIB $T_{120}\ ^\circ\text{C}$ Dc ³⁾

Ambient temperature

- Standard: -20 to $+40\ ^\circ\text{C}$
- Optional: -40 to $+40\ ^\circ\text{C}$ (order code **D03**)
- Optional: -20 to $+60\ ^\circ\text{C}$ (order codes **N05, N06, N07, N08**)

From $40\ ^\circ\text{C}$, the power is reduced.

Other temperatures are available on request.

Type of protection Ex ec/Ex tc for use in Zone 2/22 ⁴⁾

The motors must be ordered with:

- Version for Zones 2 or 22 for non-conductive dust for line operation – order code **B30** ⁴⁾

The Ex motor is not admissible in an explosive atmosphere of dust and air (hybrid). A standard is not currently available that describes the product requirements for a hybrid mixture.

Zone 2/22:  II 3G Ex ec IIC T3 Gc

 II 3D Ex tc IIIB $T_{120}\ ^\circ\text{C}$ Dc ³⁾

⁴⁾ The Ex motor is not admissible in an explosive atmosphere of dust and air (hybrid). A standard is not currently available that describes the product requirements for a hybrid mixture.

Technical specifications (continued)**Converter operation**General information

All the data listed in Catalog D 81.1 is applicable for a 50 Hz line supply. During converter operation, the reduced torques for constant torque and drives for fans, pumps and compressors must be observed due to the harmonic content of the supply. This data is available in the "Drive Technology Configurator" (DT Configurator). Higher noise levels must be expected than for 50 Hz line operation for motors operating with converters due to the harmonic content of the supply.

Maximum voltage load on the motor winding in converter operation:

Frame sizes: 71 to 315:

- $\hat{U}_{\text{phase-to-phase}} \leq 1500 \text{ V}$ (3000 V peak-peak values ($V_{\text{pk/pk}}$))
- $\hat{U}_{\text{phase-to-ground}} \leq 1100 \text{ V}$ (2200 V peak-peak values ($V_{\text{pk/pk}}$))

The following generally applies to Siemens converters (SINAMICS):

- $U_{\text{line}} = 500 \text{ V} \pm 10 \%$ (BLM = Basic Line Module; DFE = Direct Front End)
- $U_{\text{line}} \leq 460 \text{ V} \pm 10 \%$ (ALM = Active Line Module; AFE = Active Front End); $U_{\text{dc}} < 720 \text{ V}$
- $U_{\text{line}} = 690 \text{ V} \pm 10 \%$ (only permissible with SINAMICS G180 that has a reinforced dv/dt filter (standard option G180: **L10**).

Further configuration notes are documented in the factory certificate 2.1 and in the EU type-examination certificates.

Order handling for 1MB1 motors for converter operationPTC thermistor

For converter operation, Ex motors must always be monitored using PTC thermistors. The motors must therefore be ordered with the 15th position of the Article No.

- **B** – PTC thermistor for tripping – or alternatively:
- **C** – PTC thermistor for alarm and tripping.

General information regarding the PTC thermistors:

- **B** in 15th position of the Article No.:
The motors are equipped with 3 PTC thermistors for tripping in the motor winding.
- **B** in 15th position of the Article No.:
The motors are equipped with 3 PTC thermistors for alarm and 3 PTC thermistors for tripping in the motor winding.

Certified tripping units are required for this purpose, see Catalog IC 10.

Selection of the frequency converters

The SINAMICS frequency converters are categorized into 2 product groups (order code **B40** and **B41**). Each product group is a data record with motor operating data each assigned to one frequency converter. The converter type is stamped on the rating plate. Alternative, approved SINAMICS converters can be selected, by adding the order code **Y68**.

Product group 1 (basic version):

Order code **B40** – version for converter operation in basic version with operating data SINAMICS G120 with PM240-2

Product group 1 (alternative SINAMICS converter):

Order codes **B40** + **Y68**

Operating data such as order code **B40** with alternative SINAMICS converters on the rating plate

- **Y68** with plain text (C-text) G120 with PM230
- **Y68** with plain text (C-text) G120 with PM240
- **Y68** with plain text (C-text) G120C
- **Y68** with plain text (C-text) G120P with PM230
- **Y68** with plain text (C-text) G120P with PM240-2
- **Y68** with plain text (C-text) G120P with PM240P-2
- **Y68** with plain text (C-text) G120P with PM330
- **Y68** with plain text (C-text) G130
- **Y68** with plain text (C-text) G150
- **Y68** with plain text (C-text) G180
- **Y68** with plain text (C-text) S120 (BLM/SLM)
- **Y68** with plain text (C-text) V20

Product group 2 (basic version):

Order code **B41** – version for converter operation in basic version with operating data SINAMICS S150.

Product group 2 (alternative SINAMICS converter):

Order codes **B41** + **Y68**

Operating data such as order code **B41** with alternative SINAMICS converters on the rating plate:

- **Y68** with plain text (C-text) S120 (ALM)

Insulated bearings

Frame sizes 225 and 250: For converter operation it is recommended that an "insulated bearing cartridge NDE" – order code **L51** be used.

Frame sizes 280 and 315: When ordering with the order codes **B40/B41**, the "insulated bearing cartridge NDE" is included as standard.

Rating plate

The operating data for line operation is specified on the rating plate – on an additional rating plate, 4 rated operating points are possible in the following variants, according to the selected product:

Possible variants	Rated operating points in Hz				Additional identification code voltage code 12th and 13th position of the Article No. and order code
50 Hz field weakening range	5	25	50	f_{max}	50 Hz voltage: e.g. "90" and M4A
60 Hz field weakening range	6	30	60	f_{max}	60 Hz voltage: e.g. "90" and M1E
87 Hz characteristic	5	25	87	f_{max}	87 Hz at 400 VΔ: "90" and M3A

f_{max} see page 5/9.

Orientation

SIMOTICS XP 1MB1 explosion-proof motors

Technical specifications (continued)

These rated operating points on the additional plate apply for both constant torque drives and pump/fan/compressor drives. For a constant torque drive, the resulting thermal motor torques in the positioning range must be taken into account.

Example motor ID:

Motor rating plate with line operation data and additional plate with converter operation data:

For all motors, an additional rating plate complete with the operating data for the motor on the converter is fitted.

The converter type and the associated operating data are on the rating plate.

The reasons for stamping the converter type on the additional rating plate are the different control levels for the converter output voltage, pulse frequency, output frequency, harmonic content and the associated derating for the motor.

For compliance with the permissible temperature class 130 (B), derating is necessary in the case of converter operation. The reduction in torque depends on the choice of converter type. The data can be viewed in the "Drive Technology Configurator" (DT Configurator) and used as the basis for configuration.

The factory certificate 2.1 for the specified converters is stored with the documentation for low-voltage motors in the "Drive Technology Configurator" (DT Configurator).

To ensure unambiguous order handling for the voltage, each approved voltage code/voltage order code is assigned only "one" voltage/frequency, as seen below:

Voltage code 12th and 13th position of the Article No.	Order code	Line frequency	Line voltage
27	–	50 Hz	500 VY, 50 Hz power

Converter operation specially for motors in type of protection "Ex ec" (Zone 2) and VIK-Ex ec version

IEC/EN 60079-15 specifies that the motor and converter must be tested as a unit (individual test). The individual test is available for motors of "n" type of protection on the specified converters SINAMICS G, SINAMICS S and SINAMICS V20. For details, see factory certificate 2.1.

Individual testing can be performed for non-Siemens converters on request (additional charge); the customer may be required to supply the non-Siemens converter for individual tests.

The test will cost more when using non-Siemens converters (especially on commissioning). Commissioning personnel must be provided by the customer for setup and operation during the test, if required.

Converter operation specially for motors in type of protection "Ex tb" (Zone 21) and "Ex tc" (Zone 22)¹⁾

The drive system comprising motors protected against dust explosions operating on SINAMICS G, SINAMICS S and SINAMICS V20 converters has been tested. For details, see factory certificate 2.1. Please inquire about operation with non-Siemens converters.

Converter operation specially for motors in type of protection "Ex ec/Ex tc" (Zone 2/22)²⁾

For the 1MB1.3 Ex ec motors, the order code **B30** version (IP55) for Zones 2 and 22 must also be specified in the case of non-conductive dust. Factory certificate 2.1 analogous to that for Zones 2, 21 and 22. Please inquire about non-Siemens converters.

¹⁾ Zone 21 includes conductive and non-conductive dust.

²⁾ The Ex motor is not admissible in an explosive atmosphere of dust and air (hybrid). A standard is not currently available that describes the product requirements for a hybrid mixture.

³⁾ The motor contains winding version 50 Hz 230 VA.

Special technology

"Special technology" comprises technology that is compatible with explosion-proof motors.

Explosion-proof motors can be implemented in a broader range of applications when explosion-proof rotary pulse encoders or explosion-proof separately driven fans are mounted.

The use of a separately driven fan is recommended to increase motor utilization at low speeds and to limit noise generation at speeds significantly higher than the synchronous speed.

The following explosion-proof motor versions are available with explosion-proof rotary pulse encoders:

Type of protection	Motor type + order code	Frame size	Order code for explosion-proof rotary pulse encoder
Ex tb (Zone 21)	1MB101... 1MB151... 1MB161...	100 L ... 160 L 100 L ... 315 L 100 L ... 315 L	G30: Mounting of explosion-proof rotary pulse encoder for use in Zones 2, 21, and 22.
Ex tc (Zone 22)	1MB102... 1MB152... 1MB162...	100 L ... 160 L 100 L ... 315 L 100 L ... 315 L	
Ex ec (Zone 2)	1MB103... 1MB153... 1MB163...	100 L ... 160 L 100 L ... 315 L 100 L ... 315 L	
Ex ec or Ex tc (Zone 2/22)	1MB103... + B30 1MB153... + B30 1MB163... + B30	100 L ... 160 L 100 L ... 315 L 100 L ... 315 L	

Note:

The maximum speed of the rotary pulse encoder is limited to $n_{\max} = 4200$ rpm.

The following explosion-proof motor versions are available with explosion-proof separately driven fans:

Type of protection	Motor type + order code	Frame size	Order code for explosion-proof separately driven fan
Ex tb (Zone 21)	1MB151... 1MB161...	225 S ... 315 L 225 S ... 315 L	F70: "Mounting of explosion-proof separately driven fan Ex tb for use in Zone 21".
Ex tc (Zone 22)	1MB102... 1MB152... 1MB162...	100 L ... 160 L 100 L ... 315 L 100 L ... 315 L	F70: "Mounting of explosion-proof separately driven fan Ex tc for use in Zone 22".
Ex ec (Zone 2)	1MB103... 1MB153... 1MB163...	100 L ... 160 L 100 L ... 315 L 100 L ... 315 L	F70: "Mounting of explosion-proof separately driven fan Ex ec for use in Zone 2".
Ex ec or Ex tc (Zone 2/22)	1MB103... + B30 1MB153... + B30 1MB163... + B30	100 L ... 160 L 100 L ... 315 L 100 L ... 315 L	On request

Notes:

- The motor operating data with the explosion-proof separately driven fan is available in the "Drive Technology Configurator" (DT Configurator).
- Alternatively, explosion-proof separately driven fans can also be used in line operation for special applications.

¹⁾ For continuous operation in the range $f_{\max}$ ($n_{\max}$), an inquiry is required.

²⁾ For frame size 315, converter operation is not permissible with 2 poles.

Orientation

SIMOTICS XP 1MB1 explosion-proof motors

Technical specifications (continued)

Explosion-proof rotary pulse encoder

The rotary pulse encoder can only be mounted on a standard non-drive end (NDE), i.e. a second shaft extension cannot be supplied.

By virtue of its design, the explosion-proof rotary pulse encoder does not have insulated bearings (please inquire).

The type of protection of the rotary pulse encoder must be observed. The relevant data is stamped on the rating plate of the rotary pulse encoder.

Attaching an explosion-proof rotary pulse encoder increases the length of the motor by Δl .

For an explanation of the additional dimensions and weights, see "Dimensions and weights of explosion-proof rotary pulse encoders".

LL 841 900 013 rotary pulse encoder (HTL version)

This encoder has a rugged construction and is therefore also suitable for difficult operating conditions. It is resistant to shock and vibration.

The LL 841 900 013 explosion-proof rotary pulse encoder is supplied with the already mounted ADS diagnostic system for early detection of errors in the encoder.

Order code **G30**

Technical specifications for LL 841 900 013 (HTL version)

Supply voltage U_B	+9 ... +30 V
Current input without load	max. 80 mA
Admissible load current per output	40 mA
Pulses per revolution	1024
Outputs	6 short-circuit proof square-wave pulses A, A', B, B', 0, 0', high current HTL Floating switching output for ADS signal
Pulse offset between the two outputs	$90^\circ \pm 2.5^\circ \text{ el.}$
Output amplitude	$U_{\text{high}} > U_B - 4 \text{ V}$ $U_{\text{low}} < 2.5 \text{ V}$
Mark space ratio	$1:1 \pm 10 \%$
Maximum frequency	100 kHz with 350 m cable length
Maximum speed	4200 rpm (the maximum permissible speed must be observed during the configuration)
Temperature range	$-40 \dots +70^\circ \text{C}$
Degree of protection	IP65
Maximum adm. radial cantilever force	150 N
Maximum adm. axial force	100 N
Connection system	Terminal strips in encoder/cable connection M20 x 1.5 radial (screw terminals)
Weight, approx.	1.7 kg

Dimensions and weights of the explosion-proof rotary pulse encoders

Explosion-proof rotary pulse encoder (on cover), order code **G30**

1MB10, 1MB15, 1MB16 motors

Frame size	Δl	Weight approx.
	mm	kg
100	110	2
112	110	2
132	110	2
160	110	2
180	110	2
200	110	2
225	100	3
250	100	3
280	100	3
315	100	3

A protective cover of non-corrosive sheet steel is available for the explosion-proof rotary pulse encoders from the "special technology".

For motors in the shaft heights

- 100 to 200: a protective cover is always provided
- 225 to 315: Order code **G43** – "Mechanical protection for encoder" (protective cover analogous to order code **H00**)

The length of the motor is also increased in the case of the following shaft heights:

- 100 to 200 by up to 146 mm
- 225 to 315 by up to 25 mm

Technical specifications (continued)Explosion-proof separately driven fan

The use of a separately driven fan is recommended to increase motor utilization at low speeds or to limit noise generation at speeds significantly higher than the synchronous speed. Both of these results can only be achieved with converter operation. Please inquire about traction and vibratory operation.

In the case of explosion-proof motors, the explosion-proof separately driven fan is available already mounted.
Order code **F70**

Notes:

- The order code **F70** applies to all types of protection because the type of protection is already defined by the article number of the motor. Order code **F70** determines the additional charge for the separately driven fan in the assigned type of protection.
- The motor operating data with the explosion-proof separately driven fan is available in the "Drive Technology Configurator" (DT Configurator).

The supply voltage for the explosion-proof motors with separately driven fan is specified as follows:

Type 2CW2 has a wide-range voltage winding (see page 5/12 "Technical specifications of separately driven fans for 1MB1 explosion-proof motors (frame sizes 100 to 200) in the Ex tc (Zone 22) and Ex ec (Zone 2) versions").

These explosion-proof motors with separately driven fan up to frame size 200 have a rated voltage (rated voltage range) with tolerances according to IEC/EN 60034-1, range A.

A rating plate with the operating data is fitted to each explosion-proof motor with separately driven fan.

The type of protection of the explosion-proof motor with separately driven fan corresponds to that of the associated explosion-proof basic motor. Please note the direction of rotation of the separately driven fan (axial-flow fan) when connecting it.

Please inquire regarding coolant temperatures outside the range -20 to $+40$ °C.

The Ex ec /Ex tc motor with separately driven fan has the degree of protection IP55 as standard; Ex tb: IP65. (Higher degrees of protection with Ex ec are available on request.)

Motors with a separately driven fan must be equipped with a PTC thermistor as motor protection (15th position of the Article No.): In the event of a fault in the forced ventilation, the PTC thermistor must reliably trip the 1MB1 explosion-proof motor.

For assignments and article numbers, see the tables "Technical specifications of separately driven fans for explosion-proof motors 1MB1..." on the following pages. A rating plate listing all the important data is fitted to the separately driven fan. Please inquire in the case of supply voltages outside of the rated voltage range. Please note the direction of rotation of the separately driven fan (axial-flow fan) when connecting it. The permissible coolant temperatures are $CT_{min} -20$ °C and $CT_{max} +40$ °C. Lower coolant temperatures are available on request.

When the separately driven fan is mounted, the length of the motor increases by Δl . For an explanation of the additional dimensions and weights, see "Dimensions and weights of explosion-proof separately driven fans".

Orientation

SIMOTICS XP 1MB1 explosion-proof motors

Technical specifications (continued)

VIK version

VIK = Verband der Industriellen Energie- und Kraftwirtschaft e.V.
(German Association of the Energy and Power Supply Industry)

- **VIK standard version** –
1LE1 + order code **C02**
"VIK" identification on rating plate.
→ Product range in Catalog Section 2.
- **VIK-Ex ec version for line operation** –
1MB1.3 + order code **C02**
"VIK" and "Ex ec IIC T3 Gc" marking on the rating plate according to Directive 2014/34/EU (ATEX).
→ Product range in this Catalog Section.
- **VIK Ex ec version for converter operation** –
1MB1.3 + order code **C02+B40/B41+...**
"VIK" and "Ex ec IIC T3 Gc" markings on the rating plate and motor operating data for converter operation on the additional rating plate according to Directive 2014/34/EU (ATEX).

Both versions include technology for Zone 2 to type of protection Ex ec IIC T3 Gc. Motors up to frame size 355 can be supplied in accordance with the technical requirements of the VIK recommendation.

Minimum efficiency class:

- VIK standard version:
IE3 from 0.75 kW in accordance with legal requirements.
- VIK-Ex ec version:
At least IE3 in accordance with January 2018 edition of VIK recommendation.

Notes:

- 8-pole motors or all motors < 0.75 kW are still possible as these motors are outside the power range specified for IE stamping.
- Motors in VIK standard version (1LE1) with mountings (brake, rotary pulse encoder and separately driven fan) are not compatible with Zone 2. Versions for Zone 21/22 are not possible.
- 1LA/1LG VIK motors: See Catalog D 81.1 · July 2011.

Ex certification EAC for the Eurasian customs union (Russia, Belarus, and Kazakhstan)

EAC = Eurasian Conformity

For the import and commissioning of explosion-proof motors in the Eurasian customs union, approval is required from a named Russian testing authority.

"Ex certificate EAC for the Eurasian customs union"

Order code **D35**

The explosion-proof motors in this catalog section all have Eurasian ex certification except for the following:

- 1MB10, frame sizes 80 and 90
- 1MB15, frame sizes 71 to 90
- 1MB15/6, frame sizes 225 to 315, in type of protection Ex tb
- 1MB1 in version for converter operation

When motors are ordered with order code **D35**, they are fitted with an additional rating plate displaying the logo "EAC Ex" and the Russian Ex marking.

Example: Additional rating plate

The "EAC Ex" logo can also be found on the package label. The motor must have an "EAC Ex certificate", although the certificate does not generally have to be shipped with the motor. The customs authorities use the motor article number to check the motor certification.

A copy of the EAC Ex certificate must be in the customer's possession before the motor is commissioned.

The certificates are available from the SIOS (Siemens Industry Online Support) portal as well as the "Drive Technology Configurator" (DT Configurator).

Coolant temperature

Coolant temperature –40 to +40 °C for explosion-proof motor

For all 1MB10 motors, frame sizes 100 to 160 and 1MB15/6, frame sizes 100 to 315 in explosion protection types Ex ec or Ex t (Zone 21/22), the operating ambient temperature range can be optionally increased to –40 °C. Extensive technical measures are necessary in this case.

Order code **D03**

Order code **D03** is not possible in combination with order code **H02** "Vibration-proof version".

Selection and ordering data

The article number consists of a combination of digits and letters and is divided into three hyphenated blocks to provide a better overview, e.g.:

**1MB1511-1DB22-2AB4-Z
R10**

The first block (positions 1 to 7) identifies the motor type. The second block (positions 8 to 12) defines the motor frame size and length, the number of poles and in some cases the frequency/voltage. In the third block (positions 13 to 16), the frequency/voltage, type of construction and further design features are encoded.

For deviations in the second and third block from the catalog codes either **Z** or **90** should be used as appropriate.

Ordering data:

- Complete Article No. and order code(s) or plain text
- If a quotation has been requested, please specify the quotation number in addition to the Article No.
- When ordering a complete motor as a spare part, please specify the works serial No. for the previously supplied motor as well as the Article No.

¹⁾ Operating values at rated power for 60 Hz are stored in the Drive Technology Configurator (DT Configurator; see Appendix, "Tools and engineering").

²⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirements exist for condensation drainage holes (H03) or stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. For orders with condensation drainage holes (H03), the type must be specified.

³⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code R52) or a larger terminal box (order code R50) can be used. Order codes R52 and R50 alter the motor dimensions.

⁴⁾ No IE class for 50 and 60 Hz because the motor is outside the validity for the efficiency classes according to IEC 60034-30-1:2014.

- Standard version
○ Without additional charge
✓ With additional charge

- Not possible
• This order code only determines the price of the version – Additional plain text is required.

¹⁾ Delta connection is not possible.

²⁾ Star connection is not possible.

³⁾ A power of 3.7 kW is stamped on the rating plate for versions 1MB1... - 1BA2, 1MB1... - 1BB2, 1MB1... - 1CC2 and 1MB1... - 1DD2 at 60 Hz with 50 Hz power in accordance with the international efficiency classification to IEC 60034-30.

⁴⁾ Plain text must be specified in the order: Voltage between 200 and 690 V (voltages outside this range are available on request), frequency, circuit, for 60 Hz additionally required rated power in kW.

⁵⁾ Only possible for 4-pole, 6-pole and 8-pole motors and in combination with the order codes **B40** and **B41**. The operating data for converter operation is also provided in a table on the additional rating plate. The motor contains winding version 50 Hz 230 VΔ.

¹⁾ Delta connection is not possible.

²⁾ Star connection is not possible.

³⁾ A power of 3.7 kW is stamped on the rating plate for versions 1MB1... - 1BA2, 1MB1... - 1BB2, 1MB1... - 1CC2 and 1MB1... - 1DD2 at 60 Hz with 50 Hz power in accordance with the international efficiency classification to IEC 60034-30.

- Not possible
 • This order code only determines the price of the version – Additional plain text is required.

⁴⁾ Plain text must be specified in the order: Voltage between 200 and 690 V (voltages outside this range are available on request), frequency, circuit, for 60 Hz additionally required rated power in kW.

⁵⁾ Only possible for 4-pole, 6-pole and 8-pole motors and in combination with the order codes **B40** and **B41**. The operating data for converter operation is also provided in a table on the additional rating plate. The motor contains winding version 50 Hz 230 VΔ.

¹⁾ The following applies for explosion-proof motors: In the case of the types of construction with shaft extension down, the version "with protective cover" is required. For types of construction with shaft extension pointing upwards, a suitable cover must be implemented to prevent small parts from falling into the fan cover (see the standard IEC/EN 60079-0). The cover must not block the cooling air flow.

²⁾ The "Standard cylindrical shaft extension (second shaft extension)" option (order code **L05**) is not possible.

- Standard version
- Without additional charge
- This order code only determines the price of the version – Additional plain text is required.
- ✓ With additional charge
- Not possible

- ¹⁾ Please inquire regarding combination with order codes **D03** and **C02**. Not possible in combination with order codes **H20** and **H22**.
- ²⁾ There is no derating in combination with order codes **M2A**, **M2B**, **M2C**, **M2D**, **M2E**, **M2F**, **M2G**, **M2H**.
- ³⁾ Not possible for type of construction IM V3.
- ⁴⁾ For Zone 21, IP65 degree of protection is standard. Not possible for Zone 22, because only IP55 degree of protection is required.
- ⁵⁾ Not admissible for Zone 21 (IP65 degree of protection) and Zone 22 (IP55 degree of protection).
- ⁶⁾ Supplied with the condensation drainage holes sealed at the drive end DE and non-drive end NDE (IP55, IP56, IP65). If the condensation drainage holes are required for motors of the IM B6, IM B7 or IM B8 type of construction (feet on side or top), the motors must be ordered in the respective type of construction and with order code **H03**, so that the condensation drainage holes will be placed in the correct position.
- ⁷⁾ When motors are ordered that have a longer or shorter shaft extension than normal, the required position and length of the feather keyway must be specified in a sketch. It must be ensured that only feather keys in accordance with DIN 6885, Form A are permitted to be used. The feather keyway is positioned centrally on the shaft extension. The length is defined by the manufacturer in accordance with the appropriate standard. Not valid for: Conical shafts, non-standard threaded journals, non-standard shaft tolerances, friction welded journals, extremely "thin" shafts, special geometry dimensions (e.g. square journals), hollow shafts. Valid for non-standard shaft extensions DE or NDE. The feather keys are supplied in every case. For order codes **Y58**, **Y59** and **L05** the following applies:
 - Dimensions D and DA ≤ ball bearing inner diameter (see dimension tables for "Dimensions")
 - Dimensions E and EA ≤ 2 × length E (standard) of the shaft extension
 For an explanation of the order codes, see Catalog Section 1 "Introduction".
- ⁸⁾ The metal external fan is not possible in combination with the low-noise version – order code **F77** or **F78**.
- ⁹⁾ In combination with the 15th position of the article number "**H**", the order codes **Q02** and **Q03** are not possible for frame sizes 100 to 160. It can only be supplied with a star or delta winding for direct switch-on (3 terminals).

- ¹⁰⁾ The delivery time for the acceptance test certificate may differ from the delivery time for the motor.
- ¹¹⁾ The Operating Instructions (Compact) are available in PDF format for all official EU languages at <http://support.automation.siemens.com/WWW/view/en/10803948/133300>
- ¹²⁾ Order code **S06** cannot be combined with order code **S00** and **S01**. It can be combined with **Y53** and **Y56** on request.
- ¹³⁾ A minimum cantilever force F_{min} of $0.5 \cdot F_{max}$ is required for NU bearings (cylindrical roller bearings) in contrast to ball bearings. Cylindrical roller bearings are not suitable for coupling output or for brief periods of no-load operation without cantilever force.
- ¹⁴⁾ The Ex motor is not admissible in an explosive atmosphere of dust and air (hybrid). A standard is not currently available that describes the product requirements for a hybrid mixture.
- ¹⁵⁾ In combination with order codes **B40** and **B41**, "B" or "C" must be added to the 15th position of the Article No. . For compliance with the admissible temperature class 130 (B), derating is necessary in the case of converter operation in Zones 2, 21 and 22. The operating data for SINAMICS converters from Siemens are on the rating plate – the torque is reduced in contrast to line operation. The motor operating data for converter operation is available in the DTC selection and ordering tool. For converter operation, voltage codes/order codes are only admissible with one voltage only. When used in hazardous zones, the frequency converter must have a certified trip unit for motors of device category 1 (Zone 21). A certified trip unit is also recommended for motors of device category 3 (Zones 2 and 22). Alternatively, an external, certified trip unit can be used (see Catalog IC 10).
- ¹⁶⁾ Can be combined with order codes **N30**, **N31**, **L51** and **F70** on request. Not admissible in combination with order code **L05**. Combination with protective cover as standard for frame sizes 100 to 200. Protective cover not possible for frame sizes 225 to 315.
- ¹⁷⁾ In combination with order codes **N05**, **N06**, **N07**, **N08**, **N30**, **N31**, **D03**, **G30**, **C02**, **H20** and **H22** on request. Not admissible with order code **L05**. The type of protection of the separately driven fan must match that of the motor.
- ¹⁸⁾ Cannot be combined with converter operation.
- ¹⁹⁾ Vibration severity grade B not admissible in combination with converter operation (order code **B40/B41**).

Article No. supplements and special versions

SIMOTICS XP 1MB1 explosion-proof motors

Options · Cast-iron series 1MB15 Basic Line, 1MB16 Performance Line

- Standard version
- Without additional charge
- This order code only determines the price of the version – Additional plain text is required.
- ✓ With additional charge
- Not possible

5

- 1) Please inquire regarding combination with order codes D03 and C02. Not possible in combination with order codes **H20** and **H22**.
- 2) Evaluation with associated tripping unit (see Catalog IC 10) is recommended. A certified tripping unit is necessary for use in hazardous areas.
- 3) In combination with the 15th position of the Article No. "**H**", the order codes **Q02** and **Q03** are not possible for frame sizes 100 to 160. It can only be supplied with a star or delta winding for direct switch-on (3 terminals).
- 4) There is no derating in combination with order codes **M2A**, **M2B**, **M2C**, **M2D**, **M2E**, **M2F**, **M2G**, **M2H**.
- 5) Order code **H20** (IP65 degree of protection) can only be ordered for Zone 2. For Zone 21, IP65 degree of protection is standard. Not possible for Zone 22, because only IP55 degree of protection is required.
- 6) Order code **H22** IP56 degree of protection is only possible for Zone 2. Degree of protection IP56 is not permissible for Zone 21 (IP65 degree of protection) and Zone 22 (IP55 degree of protection).
- 7) Supplied with the condensation drainage holes sealed at the drive end DE and non-drive end NDE (IP55, IP56, IP65). If the condensation drainage holes are required for motors of the IM B6, IM B7 or IM B8 type of construction (feet on side or top), the motors must be ordered in the respective type of construction and with order code **H03**, so that the condensation drainage holes will be placed in the correct position.
- 8) When motors are ordered that have a longer or shorter shaft extension than normal, the required position and length of the feather keyway must be specified in a sketch. It must be ensured that only feather keys in accordance with DIN 6885, Form A are permitted to be used. The feather keyway is positioned centrally on the shaft extension. The length is defined by the manufacturer in accordance with the appropriate standard. Not valid for: Conical shafts, non-standard threaded journals, non-standard shaft tolerances, friction welded journals, extremely "thin" shafts, special geometry dimensions (e.g. square journals), hollow shafts. Valid for non-standard shaft extensions DE or NDE. The feather keys are supplied in every case.
For order codes **Y58**, **Y59** and **L05** the following applies:
– Dimensions D and DA ≤ ball bearing inner diameter (see dimension tables in "Dimensions")
– Dimensions E and EA ≤ 2 × length E (standard) of the shaft extension
For an explanation of the order codes, see Catalog Section 1 "Introduction".
- 9) The metal external fan is not possible in combination with the low-noise version – order code **F77** or **F78**.
- 10) The delivery time for the factory test certificate may differ from the delivery time for the motor.
- 11) The Operating Instructions (Compact) are available in PDF format for all official EU languages at <http://support.automation.siemens.com/WW/view/en/10803948/133300>
- 12) Order code **S06** cannot be combined with order code **S00**, **S01** and **S02**. It can be combined with **Y53** and **Y56** on request.
- 13) Available soon: Explosion protection type Ex tb (Zone 21) for 1MB15 in frame sizes 71 to 90 and for 1MB15/6 in frame sizes 225 to 315; version for converter operation for 1MB15/6 in frame sizes 71 to 315.
- 14) A minimum cantilever force $F_{\min}$ of $0.5 \cdot F_{\max}$ is required for NU bearings (cylindrical roller bearings) in contrast to ball bearings. Cylindrical roller bearings are not suitable for coupling output or for brief periods of no-load operation without cantilever force.
- 15) Standard version in combination with the order code **Q02**, **Q03** and/or 15th position of the Article No. "**H**" for frame sizes 71 to 90.
- 16) The Ex motor is not admissible in an explosive atmosphere of dust and air (hybrid). A standard is not currently available that describes the product requirements for a hybrid mixture.
- 17) In combination with order codes **B40** and **B41**, "B" or "C" must be added to the 15th position of the Article No. . For compliance with the admissible temperature class 130 (B), derating is necessary in the case of converter operation in Zones 2, 21 and 22. The operating data for SINAMICS converters from Siemens are on the rating plate – the torque is reduced in contrast to line operation. The motor operating data for converter operation is available in the DTC selection and ordering tool. For converter operation, voltage codes/order codes are only admissible with one voltage only. When used in hazardous zones, the frequency converter must have a certified trip unit for motors of device category 1 (Zone 21). A certified trip unit is also recommended for motors of device category 3 (Zones 2 and 22). Alternatively, an external, certified trip unit can be used (see Catalog IC 10).
- 18) Can be combined with order codes **N30**, **N31**, **L51** and **F70** on request. Not admissible in combination with order code **L05**. Combination with protective cover as standard for FS 100 to 200. Protective cover not possible for FS 225 to 315.
- 19) In combination with order codes **N05**, **N06**, **N07**, **N08**, **N30**, **N31**, **D03**, **G30**, **C02**, **H20** and **H22** on request. Not admissible with order code **L05**. The type of protection of the separately driven fan must match that of the motor.
- 20) The frame sizes 280 and 315 in combination with order code **B40** or **B41** are equipped with "Bearing insulation NDE" as standard (order code **L51** is included in **B40/B41**).
- 21) Not admissible for frame size 315, 2-pole. An exception is elastic installation (please inquire).
- 22) Not admissible in combination with converter operation (order code **B40**, **B41**).
- 23) On request for 2-pole motors (concerns frame sizes 225 to 315).

Overview

Couplings for use in hazardous areas

The motor from Siemens is connected to the machine or gear unit through a coupling. Siemens is an important coupling manufacturer with a wide range of products.

For standard applications, Siemens recommends that flexible couplings, types N-EUPEX and RUPEX or torsionally rigid couplings, types ARPEX and ZAPEX are used. For special applications, FLUDEX and ELPEX-S couplings are recommended. These coupling types are suitable for use in areas subject to explosion hazards and are offered with declaration of conformity and type test certificate according to Directive 94/9/EC.

Taper pins according to DIN 258 with threaded ends and constant taper lengths

Taper pins are used for components that are repeatedly removed. The drilled hole is conically ground using a conical reamer until the pin can be pushed in by hand until the cone shoulder lies approx. 3 to 4 mm above the rim of the hole.

It can then be driven in using a hammer until it is correctly seated. The pin is removed from the drilled hole by screwing on the nut and tightening it.

Standardized taper pins are commercially available.

For instance, available from:

Otto Roth GmbH & Co. KG
Rutesheimer Strasse 22
70499 Stuttgart, Germany

Email: info@ottoroth.de

Foundation block according to DIN 799

The foundation blocks are inserted into the stone foundation and embedded in concrete. They are used for fixing machines of medium size, slide rails, pedestal bearings, base frames, etc. After the fixing bolts have been unscrewed, the machines can be shifted without them having to be lifted.

When the machine is initially installed, the foundation block that is bolted to the machine (without washers) and fitted with taper pins is not embedded with concrete until the machine has been fully aligned. In this case, the machine is positioned 2 to 3 mm lower. The difference in shaft height is compensated by inserting shims on final installation. The taper pins safeguard the exact position of the machine when it is repeatedly removed and replaced without the need for realignment.

Slide rails with fixing bolts and tensioning screws according to DIN 42923

Slide rails are used to tension the belt of a machine easily and conveniently when there is no belt-tensioning pulley. They are fixed to the base using stone bolts or foundation blocks.

The assignment of slide rails to motor size can be found in DIN 42923. For motors of frame sizes 355 to 450, there are no standardized slide rails (please inquire).

More information

Replacement motors and repair parts

- Commitment to provide replacement motors and repair parts following delivery of the motor:
 - For up to 3 years after the delivery of the original motor, in the event of total motor failure – with regard to the mounting dimensions and functions – Siemens will supply a comparable replacement motor (the type series may vary).
 - If a spare motor is supplied within the 3-year period, this does not mean that the warranty restarts.
 - Replacement motors delivered after the active production of the machine series are also identified as spare motors on the rating plate.
 - Spare parts are offered only for these spare motors on request; repair and replacement are not possible.
 - After a period of 3 years (after the delivery of the original motor), it is only possible to repair these motors (depending on the availability of the spare parts required).

- For up to 5 years after the delivery of the original motor, spare parts will be available and for a further 5 years, Siemens will provide information about spare parts and will supply documents when required.

- When repair parts are ordered, the following details must be provided:
 - Designation and part number
 - Article No. and factory number of the motor.
- For bearing types, see Catalog Section 1 "Introduction".
- Repair parts are available for 1MB1 motors on request.
- For standard components, a commitment to supply repaired parts does not apply.

Overview

Notes on the dimensions

- Dimensional drawings according to EN 50347 and IEC 60072.

Fits

The shaft extensions specified in the dimension tables (DIN 748) and centering spigot diameters (EN 50347) are machined with the following fits:

Dimension designation	ISO fit DIN ISO 286-2	
D, DA	to 30 over 30 to 50 over 50	j6 k6 m6
N	to 250 over 250	j6 h6
F, FA		h9
K		H17
S	flange (FF)	H17

The drilled holes of couplings and belt pulleys should have an ISO fit of at least H7.

Dimension tolerances

For the following dimension designations, the admissible deviations are given below:

Dimension designation	Dimension	Admissible deviation
H	to 250 over 250	– 0.5 – 1.0
E, EA		– 0.5

Keyways and feather keyways (dimensions GA, GC, F and FA) are made in compliance with DIN 6885 Part 1.

- All dimensions are specified in mm.

Dimension sheet generator

(within the Drive Technology Configurator)

A dimensional drawing can be created in the Drive Technology (DT) Configurator for every configurable motor. A dimensional drawing can be requested for every other motor.

When a complete Article No. is entered with or without order codes, a dimensional drawing can be called up under the "Documentation" tab.

These dimensional drawings can be presented in different views and sections and printed.

The corresponding dimension sheets can be exported, saved and processed further in DXF format (interchange/import format for CAD systems) or as bitmap graphics.

Online access in the Siemens Industry Mall

The "DT Configurator" is integrated into the Siemens Industry Mall and can be used on the Internet without installation.

German: www.siemens.de/dt-konfigurator

English: www.siemens.com/dt-configurator

Offline access in the Interactive Catalog CA 01

The "DT Configurator" is also integrated on the DVD of the Interactive Catalog CA 01 – the offline version of Siemens Industry Mall. CA 01 can be ordered from the relevant Siemens sales office or via the Internet:

www.siemens.com/automation/CA01

¹⁾ When ordering a terminal box positioned on the left-hand side or right-hand side, the feet are screwed on as standard.
These screwed-on feet have 3 drill holes on the NDE with the respective dimension B 406, 457 and 508 mm; the dimension BB is 666 mm.

SIMOTICS DP application-specific motors

Introduction

Overview

With the designation SIMOTICS DP, Siemens offers a number of industry and application specific (**D**efinite **P**urpose) motors that differ from standard motors in that they have special industry/application-specific features:

SIMOTICS DP smoke extraction motors

Smoke extraction motors are characterized by the fact that they ensure operation of ventilation and heat extraction facilities in buildings and structures (e.g. tunnels) to keep escape routes free of smoke and increase the chances of survival in dangerous situations in accordance with standard EN 12101-3/2002, even at high temperatures.

Our smoke extraction motors in temperature class F200/F300 are therefore used in highly frequented public buildings, such as discos, shopping malls, movie theaters, theaters, airports, parking garages, stairwells, tunnels, and in industrial buildings.

You will find more information on smoke extraction motors on the following pages. Further variants (e.g. different numbers of poles) are possible on request.

SIMOTICS DP marine motors

Marine motors are exposed to air humidity and other hostile conditions on the high seas and must always perform their function reliably. Our marine motors meet the standards of the leading classification companies (DNV GL, BV, LR, RS, KR, ABS, RINA) and have type test certifications up to frame size 315 L. They are basically suitable for the higher ambient temperatures in engine rooms below deck. If requested, a representative of the marine classification society can be present in our factories to formally accept equipment.

You will find more information on marine motors on the following pages.

SIMOTICS DP steel plant motors

The steel plant motors are specially designed for applications in the steel industry with stringent requirements for vibrations and shocks according to class 3M4 (EN 60721-3-3). They provide an optimized technical and economic solution for numerous transportation tasks in the steel manufacturing process or in steel manufacturing facilities, in which no scale dust occurs. Steel plant motors can be operated at a constant speed directly on the line or are used together with the SINAMICS S120 converter for dynamic processes.

The ordering data for SIMOTICS DP steel plant motors can be found in the Catalog Add On D 81.1 AO – Motors for the steel industry.

SIMOTICS DP roller table and steel mill motors

SIMOTICS DP roller table and steel mill motors are designed for directly driving the rollers of working roller tables in reversing rolling mills. They are designed as completely enclosed three-phase induction motors, with a frame made of spheroidal graphite cast iron, ring ribs, and reinforced bearing shields. This makes the motors ideal for use with typical shocks and vibrations and severe dirt due to scale dust. On account of their special mechanical design, they meet the most stringent requirements demanded by this application. Of course, the motors are also designed for variable-speed reversing operation on frequency converters of the SINAMICS S and G series.

The ordering data for SIMOTICS DP roller table and steel mill motors can be found in the Catalog Add On D 81.1 AO – Motors for the steel industry.

SIMOTICS DP crane motors

Like marine motors, crane motors are exposed to extreme climatic conditions and must meet tough operating requirements. Our crane motors stand up to high humidity levels, salt-laden air, and high wind speeds. They are characterized by high overload capability and a large speed setting range, for example, to operate hoist mechanisms efficiently in converter operation. SIMOTICS DP crane motors are reliably protected against corrosion with especially elaborate paint systems and sealing. The rugged cast-iron motors are especially suitable for tough operation under hostile conditions, for indoor and outdoor use, e.g. in harbor facilities for rubber-tired gantry, rail-mounted gantry, and automatic stacking cranes. Special pulse encoders and brakes round off the product to form a perfectly adapted solution.

The ordering data of the SIMOTICS DP crane motors can be found in Catalog CR 81 – Crane Motors (available soon).

Overview

The low-voltage motors with squirrel-cage rotors in efficiency classes IE2 and IE3 for implementation in automatic smoke and heat extraction units to EN 12101-3 are mainly designed for driving smoke extraction fans. For this reason, they are known as smoke extraction motors. They are mainly used in buildings or structures in which smoke control is necessary due to their shape and arrangement.

Temperature/time classification according to EN 12101-3

- F200 corresponds to 200 °C for 120 min
- F300 corresponds to 300 °C for 60 min

Testing and test certificates

The Siemens smoke extraction motors have been tested in accordance with EN 12101-3 by the Materialprüfanstalt Braunschweig (Material Test Institute, Brunswick, Germany) in the "Institute for Building materials, concrete construction and fire protection".

Test conditions for F200/F300:

- Temperature **300 °C**
- Time **120 min**

With a test time of 120 min, in contrast to the standard test time of 60 min, the Siemens F200/F300 smoke extraction motors offer a great deal more reliability.

The test certificates are available.

The motors are manufactured with aluminum or cast-iron housings depending on their frame sizes. The smoke extraction motors are based on the standard motors and comprise the following motor types:

Temperature/time classes F200 and F300

- **Self-ventilated motors** – Aluminum series 1PC1300, 1PC1303 and cast-iron series 1PC1301, 1PC1304 – version with integrated fan (metal)
- **Forced-air cooled motors** – Aluminum series 1PC1300, 1PC1303 and cast-iron series 1PC1301, 1PC1304 (in each case Article No. with **-Z** and order code **F90**) – version without integrated fan; located in the air flow of the driven fan

The resonance of mountings and reactions from driven machines can cause high levels of vibration in the overall equipment unit. This has a significant effect on the expected lifetime of the bearing.

These vibrations are evaluated during continuous operation in accordance with Zones A and B according to ISO 10816.

To ensure safe operation of fans under standardized test conditions of 300 °C for a duration of 2 hours, the following limit values for radial vibrations on the bearing plate must be maintained even under these conditions.

Maximum admissible vibration values under standardized test conditions at 300 °C for a duration of 2 h in the test laboratory.

Frame size	Vibration velocity mm/s
80 ... 112	15
132 ... 200	20
225 ... 315	25

SIMOTICS DP application-specific motors

Smoke extraction motors

Orientation

Benefits

The smoke extraction motors operate as so-called "dual-function motors":

- Normal operation (no instance of fire): Incoming/outgoing air flow
- Fault operation (in case of fire):
 - Removal of smoke from escape and access routes
 - Supporting fire fighting by creating a smoke-free zone
 - Protecting devices and equipment
 - Reducing the heat stress of components during a fire
 - Reducing secondary damage due to thermal byproducts and hot gases.

Admissible normal operating temperature:

-20 to 40 °C as standard

The smoke extraction motors offer the user a number of advantages:

- The assignment of standard powers is unchanged - this means that a larger construction size is not required for smoke extraction motors
- IE2 and IE3 efficiency grades comply with the European EUP Directive
- Smoke extraction motors are generally equipped with located bearings at the drive-end (DE) of the motor
- A fire event plate is screwed onto the motor
- Freely protruding cables are included in the scope of supply
- Radial-flow and axial-flow fan drive are possible
 - Self-ventilated 1PC1300 and 1PC1301 series motors with a metal fan impeller can be used as radial-flow fan drives
 - Forced-air cooled 1PC1300 and 1PC1301 series motors can be implemented as axial flow fan drives (in each case Article No. with **-Z** and order code **F90**) taking into account the required volumetric flow for motor cooling. In this case the driven fan performs the ventilation.

Application

The smoke extraction motors are designed for use in automatic smoke and heat extraction units to EN 12101-3. Typical application examples include:

- Tunnels
- Single and multi-storey shopping centers
- Industrial buildings and warehouses
- Building complexes and atriums
- Theaters
- Indoor car parks
- Staircases

Technical specifications

Standards and regulations

In addition to the relevant standards and regulations, EN 12101-3 applies for non-portable fire-fighting systems:

Systems for controlling smoke and heat flows, part 3, specifications for smoke and heat extraction units.

Voltage and frequency

Rated voltages according to IEC 60038

- 230 VΔ 50 Hz
- 400 VΔ 50 Hz and 400 VY 50 Hz
- 500VΔ 50 Hz and 500 VY 50 Hz
- 690 VY 50 Hz

Non-standard voltages (voltage codes **9** in the 12th position of the Article No., **0** in the 13th position of the Article No. and order code **M1Y**) as well as 60 Hz on request for 4 to 6-pole machines. Converter operation is permissible up to a line voltage of $U_{\text{rated}} \leq 460$ V (see section "Insulation system").

Measures must be implemented in the plant by the system supplier for switchover to line operation in the event of a fire.

Reduction factor k_{HT} for different installation altitudes and/or coolant temperatures

Reduction factor k_{HT}		Ambient temperature in °C					
Installation altitude above sea level							
m		< 30 °C	30 ... 40 °C	45 °C	50 °C	55 °C	60 °C
1000		1.07	1.00	0.96	0.92	0.87	0.82
1500		1.04	0.97	0.93	0.89	0.84	0.79
2000		1.00	0.94	0.9	0.86	0.82	0.77
2500		0.96	0.90	0.86	0.83	0.78	0.74
3000		0.92	0.86	0.82	0.79	0.75	0.70
3500		0.88	0.82	0.79	0.75	0.71	0.67
4000		0.82	0.77	0.74	0.71	0.67	0.63

Coolant temperature and installation altitude are rounded to 5 °C and 500 m respectively

The following rating plates are available for the smoke extraction motors:

- Rating plate
For the listed rated voltages with 50 Hz power data including information on bearing types and optional regreasing data
- Fire event plate
Complete with number and year of issue of the European standard, temperature/time class and minimum duration of function.

All plates are resistant to corrosion. A second set of plates is included with the motor, loose.

Rated power, duty type, number of poles

The rated power applies for continuous duty (normal duty) according to IEC 60034-1, for a frequency of 50 Hz, ambient temperatures up to 40 °C and installation altitudes up to 1000 m above sea level.

Derating is necessary at higher coolant temperatures and installation altitudes (reduction factor k_{HT}), see table below.

Technical specifications (continued)
Operation in the event of a fire

In addition to normal duty, operation in the event of a fire as specified in EN 12101-3 is available.

At the end of the fire incident, the motor may be unfit for normal duty. **For this reason, regulations stipulate that the motor must be replaced as a matter of course.**

In the event of a fire, any "thermal motor protection" must be deactivated.

Standard number of poles

2, 4 and 6

For more poles and pole-changing motors, please inquire.

Insulation system

The special insulation systems are adapted to the respective temperature/time classes.

The insulation of the smoke extraction motors is designed such that converter operation is permissible for line voltages ≤ 460 V for frame sizes 80 to 200 and ≤ 500 V for frame sizes 225 to 315.

The following limit values (voltage values are peak values) must be complied with in all operating states:

Frame sizes 80 to 200:

- $\hat{U}_{\text{phase-to-phase}} \leq 1500$ V
- $\hat{U}_{\text{phase-to-ground}} \leq 1100$ V

Frame sizes 225 to 315:

- $\hat{U}_{\text{phase-to-phase}} \leq 1600$ V
- $\hat{U}_{\text{phase-to-ground}} \leq 1400$ V

Voltage rise times of $t_s > 0.1$ μs .

In the event of a fault, the motors must be switched over from converter operation to line operation. If converter operation is also required in the event of a fire, this must be ensured through system testing and full acceptance testing by the fan manufacturer.

Drainage holes

Generally available; but closed if ordered according to IP55 degree of protection.

Bearing plates

All bearing plates of types of construction IM B3, IM B5 and IM B14 are cast iron.

For smoke extraction motors, it is also possible to order on request the special types of construction IM B30 (horizontal type of construction) as well as IM V30 and IM V31 (both vertical types of construction) in accordance with EN 60034-7. (clamp mounting, pad mounting, shaft fan mounting)

On the motor side, either 3 or 4 radial mounting threads can be provided on the housing or the IM B3 bearing plates at DE and NDE. These can be used to fix the motor centrally inside a pipe or a fan unit.

Connection system

Protruding cable with casing, without terminal box with cover plate or "nozzle cap". The cable length, core ends and diameter depend on the frame size.

Frame size	Rated power kW	Number of cores	Cross-section mm ²	Length m	Cable diameter ± 1 mm mm
80 ... 112	0.37 ... 4	7	1.5	1	12
132	3 ... 7.5	7	1.5	1.5	12
160	7.5 ... 18	7	4	1.5	16
180 ... 200	15 ... 37	7	10	1.5	25
225 ... 280	30 ... 55	7	10	2.5	25
280 ... 315	75 ... 90	2 x 4	16	2.5	24
315	110 ... 132	2 x 4	3 x 35 + 25	2.5	33
315	160 ... 200	2 x 4	3 x 50 + 25	2.5	38

Special versions of connecting cables are available on request.

Location of the terminal box base

Frame sizes 80 to 315:

- At top and at drive end (DE) as standard
16th position of the Article No. digit 4
- Terminal box base right
16th position of the Article No. digit 5
- Terminal box base left
16th position of the Article No. digit 6
- Terminal box base at bottom (not possible for IM B3)
16th position of the Article No. digit 7

Location of terminal box base with the corresponding digits in the 16th position of Article No. 0° position of cable outlet

Optional: Terminal box base at NDE

– Order code **H08**

When the terminal box base is rotated to the non-drive end of the motor, it is important to note that dimensions "C" and "CA" will not comply with the values specified in EN 50347. Please request a dimension drawing.

Direction of cable outlet

- Frame sizes 80 to 160 (aluminum):
Further routing of the connecting cable only in radial direction with respect to the position of the terminal box base.
- Frame sizes 180 to 315 (cast iron):
Further routing of the connecting cable towards NDE
Option **R11** with respect to the position of the terminal box base.
Other options are also possible after **R12** or **R13**.
R13 = Cable entry in 0° position as shown in diagram.

SIMOTICS DP application-specific motors

Smoke extraction motors

Orientation

Technical specifications (continued)

Location of the cable entries with corresponding order codes. The equipment is grounded with a protruding cable.

Bearings, grease

Special bearing systems are used.

Deep-groove bearings of series 60, 62 or 63 without play are used depending on the individual frame sizes.

The located bearing is generally at the drive-end (DE).

The nominal bearing lifetime L_{10h} (fan drive) is at least 20 000 hours at full rated load.

The motors of frame sizes 80 to 250 generally have bearings that are greased for life.

Paint finish

The motors are shipped as standard with a two-component paint finish (worldwide) in the color RAL 7030.

Required minimum cooling air flow in standard duty

Required cooling air flow for 1PC1300/1PC1303 motors

Frame size	No. of poles		
	2	4	6
	m ³ /min	m ³ /min	m ³ /min
80	1.36	0.66	0.42
90	2.66	1.34	0.87
100	3.8	2.1	1.5
112	5.0	2.9	1.9
132	6.3	4.6	3.1
160	10.9	6.7	5

Required cooling air flow for 1PC1301/1PC1304 motors

Frame size	No. of poles		
	2	4	6
	m ³ /min	m ³ /min	m ³ /min
180	12.4	7.8	5.2
200	14.3	10.6	7.9
225	21.5	18.5	15
250	30	20	20
280	26.5	32	24
315	40	40	30

In the motor version without an integrated fan (with order code **F90**), the motor is located in the airflow of the driven fan that must drive the minimum cooling airflow over the motor housing. The operating temperature of the motor can be reduced at higher air flow rates. The decisive factor for the effectiveness of the increased cooling airflow is the actual increase in the winding temperature during rated operation.

Admissible loading on the shaft extension

The values specified in the table "Admissible loading on the shaft extension" are the tested and approved maximum values (test duration two hours, temperature in case of fire 300 °C).

In standard duty at coolant temperatures up to CT 40 °C, a bearing lifetime $L_{10h} > 20\,000$ hours is achieved.

The values apply to all horizontal mounting positions and to all vertical mounting positions with shaft pointing downwards.

Please inquire in the case of:

- Higher force pairings
- Motors with more poles
- Vertical arrangement, depending on the rotor mass and mounting location (shaft pointing downwards or shaft pointing upwards) of the smoke extraction motor. If necessary, higher forces can be approved.

Technical specifications (continued)

Admissible loading on the shaft extension in the event of fire

Frame size	Bearings DE	Type of loading on shaft	Horizontal shaft						Shaft pointing vertically downwards					
			2-pole		4-pole		6-pole		2-pole		4-pole		6-pole	
			F_R N	$F_{A \text{ tens}}$ N	F_R N	$F_{A \text{ tens}}$ N	F_R N	$F_{A \text{ tens}}$ N	F_R N	$F_{A \text{ tens}}$ N	F_R N	$F_{A \text{ tens}}$ N	F_R N	$F_{A \text{ tens}}$ N

Note:

In the event of a fault (fire), the reduced loads given above must be observed and ensured by appropriate measures in the ventilation system.

Under normal operating conditions (CT 40 °C), the admissible loads specified in part 1 of the catalog under "Bearings and lubrication" must be complied with.

Load types

Smoke extraction motors

Article number code

Selection and ordering data

The article number consists of a combination of digits and letters and is divided into three hyphenated blocks to provide a better overview, e.g.:

1PC1301-1EB22-2FB4-Z
L22

The first block (positions 1 to 7) identifies the motor type. The second block (positions 8 to 12) defines the motor frame size and length, the number of poles and in some cases the frequency/voltage. In the third block (positions 13 to 16), the frequency/voltage, type of construction and further design features are encoded.

For deviations in the second and third block from the catalog codes either **Z** or **90** should be used as appropriate.

Ordering data:

- Complete Article No. and order code(s) or plain text
- If a quotation has been requested, please specify the quotation number in addition to the Article No.
- When ordering a complete motor as a spare part, please specify the works serial No. for the previously supplied motor as well as the Article No.

[illegible]

Ordering example

Selection criteria	Requirement	Structure of the Article No.
Motor type 1PC1304	Self-ventilated smoke extraction motor, cast-iron version, with IE3 High Efficiency, IP55 degree of protection	1PC1304-■■■■■-■■■
Motor frame size/No. of poles/Speed	180 M/4-pole/1500 rpm	1PC1304-1EB2-■■■■
Rated power	18.5 kW	
Voltage and frequency	230 VΔ/400 VY, 50 Hz	1PC1304-1EB22-2■■■
Type of construction with special version	IM B5	1PC1304-1EB22-2F■■
Motor protection	Motor protection with 1 or 3 PTC thermistors or PTC thermistors – for tripping (2 terminals)	1PC1304-1EB22-2FB■
Terminal box position	Terminal box at top	1PC1304-1EB22-2FB4
Special version	Bearing design for increased cantilever forces	1PC1304-1EB22-2FB4-ZL22

¹⁾ Operating values at rated power for 60 Hz possible on request (for 4-pole and 6-pole).

²⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirements exist for condensation drainage holes (H03) or stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. For orders with condensation drainage holes (H03), the type must be specified.

¹⁾ Operating values at rated power for 60 Hz possible on request (for 4-pole and 6-pole).

²⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirements exist for condensation drainage holes (H03) or stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. For orders with condensation drainage holes (H03), the type must be specified.

¹⁾ Important: Dimensions "C" and "CA" deviate from the EN 50347 standard. Note dimensions according to dimensions sheet generator!

²⁾ Order code **S06** cannot be combined with order code **S00** and **S01**. It can be combined with **Y53** and **Y56** on request.

³⁾ Order code **H00** provides mechanical protection.

⁴⁾ When motors are ordered that have a longer or shorter shaft extension than normal, the required position and length of the feather keyway must be specified in a sketch. It must be ensured that only feather keys in accordance with DIN 6885, Form A are permitted to be used. Valid for non-standard shaft extensions DE or NDE. The feather keys are supplied in every case.

For order codes **Y58**, **Y59** and **L05** the following applies:

– Dimensions D and DA ≤ ball bearing inner diameter

(see dimension tables for "Dimensions")

– Dimensions E and EA ≤ 2 × length E (standard) of the shaft extension.

For an explanation of the order codes, see Catalog Section 1 "Introduction".

⁵⁾ Can be ordered for 230 VΔ/400 VY or 400 VΔ/690 VY (voltage code "22" or "34").

⁶⁾ The delivery time for the factory test certificate may differ from the delivery time for the motor.

⁷⁾ The Operating Instructions (Compact) are available in PDF format for all official EU languages at <http://support.automation.siemens.com/WW/view/en/10803948/133300>.

⁸⁾ A minimum cantilever force $F_{\min}$ of $0.5 \cdot F_{\max}$ is required for NU bearings (cylindrical roller bearings) in contrast to ball bearings. Cylindrical roller bearings are not suitable for coupling output or for brief periods of no-load operation without cantilever force.

- O. R. Possible on request

¹⁾ Important: Dimensions "C" and "CA" deviate from the EN 50347 standard. Note dimensions according to dimensions sheet generator!

²⁾ Order code **S06** can only be ordered in combination with **S03**, and cannot be combined with order code **S00**, **S01** and **S02**. It can be combined with **Y53** and **Y56** on request.

³⁾ On request for 2-pole motors (concerns frame sizes 225 to 315).

⁴⁾ When motors are ordered that have a longer or shorter shaft extension than normal, the required position and length of the feather keyway must be specified in a sketch. It must be ensured that only feather keys in accordance with DIN 6885, Form A are permitted to be used. The feather keyway is positioned centrally on the shaft extension. The length is defined by the manufacturer in accordance with the appropriate standard. Valid for non-standard shaft extensions DE or NDE. The feather keys are supplied in every case. For order codes **Y58**, **Y59** and **L05** the following applies:
– Dimensions D and DA ≤ ball bearing inner diameter (see dimension tables for "Dimensions")
– Dimensions E and EA ≤ 2 × length E (standard) of the shaft extension. For an explanation of the order codes, see Catalog Section 1 "Introduction".

⁵⁾ Can be ordered for 230 VΔ/400 VY or 400 VΔ/690 VY (voltage code "22" or "34").

⁶⁾ The delivery time for the factory test certificate may differ from the delivery time for the motor.

⁷⁾ The compact operating instructions are available in PDF format for all official EU languages at <http://support.automation.siemens.com/WW/view/en/10803948/133300>.

⁸⁾ A minimum cantilever force $F_{\min}$ of $0.5 \cdot F_{\max}$ is required for NU bearings (cylindrical roller bearings) in contrast to ball bearings. Cylindrical roller bearings are not suitable for coupling output or for brief periods of no-load operation without cantilever force.

⁹⁾ Not possible for 2-pole motors, frame size 315.

Overview

Couplings

The motor from Siemens is connected to the machine or gear unit through a coupling. Siemens is an important coupling manufacturer with a wide range of products.

For standard applications, Siemens recommends that flexible couplings, types N-EUPEX and RUPEX or torsionally rigid couplings, types ARPEX and ZAPEX are used. For special applications, FLUDEX and ELPEX-S couplings are recommended.

Taper pins according to DIN 258 with threaded ends and constant taper lengths

Taper pins are used for components that are repeatedly removed. The drilled hole is conically ground using a conical reamer until the pin can be pushed in by hand until the cone shoulder lies approx. 3 to 4 mm above the rim of the hole.

It can then be driven in using a hammer until it is correctly seated. The pin is removed from the drilled hole by screwing on the nut and tightening it.

Standardized taper pins are commercially available.

For instance, available from:

Otto Roth GmbH & Co. KG
Rutesheimer Strasse 22
70499 Stuttgart, Germany

Foundation block according to DIN 799

The foundation blocks are inserted into the stone foundation and embedded in concrete. They are used for fixing machines of medium size, slide rails, pedestal bearings, base frames, etc. After the fixing bolts have been unscrewed, the machines can be shifted without them having to be lifted.

When the machine is initially installed, the foundation block that is bolted to the machine (without washers) and fitted with taper pins is not embedded with concrete until the machine has been fully aligned. In this case, the machine is positioned 2 to 3 mm lower. The difference in shaft height is compensated by inserting shims on final installation. The taper pins safeguard the exact position of the machine when it is repeatedly removed and replaced without the need for realignment.

Slide rails with fixing bolts and tensioning screws according to DIN 42923

Slide rails are used to tension the belt of a machine easily and conveniently when there is no belt-tensioning pulley. They are fixed to the base using stone bolts or foundation blocks.

The assignment of slide rails to motor size can be found in DIN 42923. For motors of frame sizes 355 to 450, there are no standardized slide rails (please inquire).

More information

Replacement motors and repair parts

- Commitment to provide replacement motors and repair parts following delivery of the motor:
 - For up to 3 years after the delivery of the original motor, in the event of total motor failure – with regard to the mounting dimensions and functions – Siemens will supply a comparable replacement motor (the type series may vary).
 - If a spare motor is supplied within the 3-year period, this does not mean that the warranty restarts.
 - Replacement motors delivered after the active production of the machine series are also identified as spare motors on the rating plate.
 - Spare parts are offered only for these spare motors on request; repair and replacement are not possible.
 - After a period of 3 years (after the delivery of the original motor), it is only possible to repair these motors (depending on the availability of the spare parts required).

- For up to 5 years after the delivery of the original motor, spare parts will be available and for a further 5 years, Siemens will provide information about spare parts and will supply documents when required.

- When repair parts are ordered, the following details must be provided:
 - Designation and part number
 - Article No. and factory number of the motor
- For bearing types, see the section "Introduction".
- For standard components, a commitment to supply repaired parts does not apply.

SIMOTICS DP application-specific motors

Smoke extraction motors

Dimensions · Notes on the dimensions, dimension sheet generator (part of the DT Configurator)**Overview (continued)****Notes on the dimensions**

- Dimensional drawings according to EN 50347 and IEC 60072.

- Fits

The shaft extensions specified in the dimension tables (DIN 748) and centering spigot diameters (EN 50347) are machined with the following fits:

Dimension designation	ISO fit DIN ISO 286-2	
D, DA	to 30 over 30 to 50 over 50	j6 k6 m6
N	to 250 over 250	j6 h6
F, FA		h9
K		H17
S	flange (FF)	H17

The drilled holes of couplings and belt pulleys should have an ISO fit of at least H7.

- Dimension tolerances

For the following dimension designations, the admissible deviations are given below:

Dimension designation	Dimension	Admissible deviation
H	to 250 over 250	– 0.5 – 1.0
E, EA		– 0.5

Keyways and feather keyways (dimensions GA, GC, F and FA) are made in compliance with DIN 6885 Part 1.

- All dimensions are specified in mm.

Dimension sheet generator

(part of the DT Configurator)

A dimensional drawing can be created in the DT Configurator for every configurable motor. A dimensional drawing can be requested for every other motor.

When a complete Article No. is entered with or without order codes, a dimensional drawing can be called up under the "Documentation" tab.

These dimensional drawings can be presented in different views and sections and printed.

The corresponding dimension sheets can be exported, saved and processed further in DXF format (interchange/import format for CAD systems) or as bitmap graphics.

Online access in the Siemens Industry Mall

The DT Configurator is integrated in the Siemens Industry Mall and can be used on the Internet without installation.

German: www.siemens.de/dt-konfigurator

English: www.siemens.com/dt-configurator

Offline access in the Interactive Catalog CA 01

The DT Configurator is also integrated on the DVD of the Interactive Catalog CA 01 – the offline version of Siemens Industry Mall. CA 01 can be ordered from the relevant Siemens sales office or via the Internet: www.siemens.com/automation/CA01

¹⁾ In the low-noise version, a second shaft extension and/or mounted encoder is not possible.

SIMOTICS DP application-specific motors

Marine motors

Orientation

Overview

Low-voltage motors in the marine version can be used below deck on ships and in the offshore industry. The thermal utilization of the motors is adapted to the generally higher ambient temperatures onboard ships. If the application demands compliance with additional regulations, such as explosion protection (Directive 94/9/EC (ATEX 95)), the appropriate motor series must be chosen.

The motors on board ships are generally subdivided into three classes of importance by the marine classification societies in cooperation with customers, depending on the field of application:

- **Essential Service for Propulsion** or also referred to as Primary Essential Service
- **Essential Service** or also referred to as Secondary Essential Service or Important Service
- **Non-Essential Service** or also referred to as Non-Important Service

The class of importance must be specified by the customer (ordering party). Retrospective certification by means of individual acceptance test or construction supervision cannot be issued.

The categories include the following requirements of the classification societies:

	Class of importance		
	Essential Service for Propulsion	Essential Service	Non-Essential Service
Typical applications	Propeller drive, thruster	Thrusters, lateral thrust units, anchor winches, bilge and ballast pumps, fire-fighting pumps	Pumps for service water
Version	In accordance with the regulations set up by the classification society		In accordance with ambient conditions set up by the classification society
Acceptance test certificate	Acceptance test certificate 3.2 in accordance with EN 10204	Acceptance test certificate 3.1 in accordance with EN 10204	None
Individual acceptance by classification society	Necessary if no type test certificate exists or the rated power lies above the limit defined by the classification society		Not required
Type test	Not a requirement of the classification societies For standard motors up to frame size 315 L, a type test certificate is supplied. These motors can only be ordered with options E11 to E54 in accordance with the classification society.		
Ordering several identical motors	Differentiation between the first motor and additional ones must be realized when ordering using an order code		No distinction
Rating plate data	Information about ambient conditions of the classification society		
Stamp of the classification society	Stamp on shaft and housing		No stamp

Classification societies

Society	Abbreviation	Location
American Bureau of Shipping	ABS	USA
Bureau Veritas	BV	France
DNV GL Maritime	DNV GL	Germany
Korean Register	KR	Korea
Lloyds Register	LR	UK
Registro Italiano Navale	RINA	Italy
Russian Maritime Register of Shipping	RS	Russia

Overview (continued)**Type test (type approval)**

All 1LE1, 1MB1, 1PC1, 1PC3 motors are manufactured and type tested in accordance with the regulations set up by the following international classification societies:

- ABS (American Bureau of Shipping)

- BV (Bureau Veritas, France)

- DNV GL Maritime

- KR (Korean Register of Shipping)

- LR (Lloyds Register of Shipping)

- Registro Italiano Navale (RINA)

- Russian Maritime Register of Shipping (RS)

Special versions that differ from the range defined in the catalog are possible on request.

Benefits

The marine motors offer the user a number of advantages and benefits:

- Cast-iron versions can be supplied for corrosive atmospheres especially for high humidity levels and salty air
- Increased corrosion protection using specially designed paint finishes is available
- Certified marine motors can be supplied for use in areas to be protected against explosion (hazardous zones)
- Due to the existing type test, individual acceptance test in power ranges below the power limits defined by the classification societies is not required which means short delivery times
- In depth know-how regarding customer requirements
- Worldwide service network with 24 hour service hotline for motors and converters

AGMA

SIMOTICS DP application-specific motors

Marine motors

Orientation

Application

Our type tested marine motors are specially designed for use on board ship below deck and for the offshore industry:

- Applications on ships as main and auxiliary drives below deck, e.g.:
 - Fans (air conditioning systems, refrigeration systems)
 - Pumps (for fire-extinguishing water, fuels, oils)

- Winches (anchor winches, warping winches, lifting gear)
- Compressors
- Bow thruster drives
- Ex motors for hazardous zones
- Application in the offshore industry
 - Coastal areas, e.g. oil rigs, drilling ships

Typical below-deck applications

Technical specifications

Housing design

Motors can be supplied depending on the motor series in a corrosion-resistant aluminum housing and in a rugged low-vibration cast-iron version.

Motor connection

Cable glands are not included in the standard scope of supply with the exception of explosion-proof motors (see "Special versions").

All marine motors generally have an external grounding terminal.

Mountings (rotary pulse encoder, separately driven fan, brake)

Brakes, encoders and separately driven fans from our basic series (1LE, 1MB) are accepted as mountings without a separate certificate from the marine classification societies by the following: GL, LR, RINA, RS, DNV, ABS and KR.

However, BV always demands separate certification for encoders. For this reason, 1LE1, 1MB1, 1PC1 and 1PC3 motors for BV can only be supplied in the "prepared for encoder mounting" condition. In this instance, the customer must bear responsibility for purchasing and installing a suitable encoder. With respect to brakes and separately driven fans, BV will also accept Siemens standard components.

Fan / fan cover

Fans and fan covers are made from the same materials as components from the basic series. BV stipulates that these components must be made of metal, and they are automatically supplied in this material when order code **E31** is specified.

Technical specifications (continued)

Temperature class and coolant temperature

SIMOTICS GP/SD standard motors and SIMOTICS XP explosion-proof motors up to frame size 315 L

In general, marine motors are designed for a coolant temperature CT 45 °C in temperature class 155 (F) – used according to 155 (F) – with thermal reserve. When motors are used according to temperature class 130 (B) (order code **N05**), derating is required. For standard motors up to frame size 315 L, the derating is approx. 4 % (for order codes **E52** and **E21** approx. 8 %).

1MB1 motors in Zones 2, 21 and 22 are designed for temperature class 155 (F) – used according to temperature class 130 (B) – with derating of approx. 4 % (with order code **E52** approx. 8 %). Motors with increased power in temperature class 155 (F) – used according to temperature class 155 (F) – are also derated by approx. 4 % (with order code **E52** and **E21** approx. 8 %). If temperature class 155 (F) is to be used according to 130 (B), further derating of approximately 10 % is required.

Coolant temperatures that exceed CT 45 °C require derating in accordance with the following table:

	Coolant temperature CT			
	45 °C	50 °C	55 °C	60 °C
Temperature class 155 (F) used according to 155 (F)				
Derating factor for line operation	1.00	0.96	0.92	0.87

Non-standard motors SIMOTICS N-compact

For the non-standard motors 1LA8, 1PQ8 the following derating factors apply for increased coolant temperatures and with line operation:

	Coolant temperature CT			
	45 °C	50 °C	55 °C	60 °C
Temperature class 155 (F) used according to 155 (F)				
Derating factor for line operation	1.00	0.96	0.92	0.87
Temperature class 155 (F) used according to 130 (B)				
Derating factor for line operation	0.90	0.86	0.83	0.78

For the non-standard motors 1LA8, 1PQ8 the following derating factors apply for increased coolant temperatures and for converter operation:

	Coolant temperature CT			
	45 °C	50 °C	55 °C	60 °C
Temperature class 155 (F) used according to 155 (F)				
Derating factor for converter operation	0.96	0.92	0.87	0.82
Temperature class 155 (F) used according to 130 (B)				
Derating factor for converter operation	0.82	0.78	0.74	0.70

More detailed information is available on request.

Rating plate and acceptance test certificate

Rating plate for a marine motor according to DNV

Degree of protection

The protection classes applicable here are specified in the catalog sections for basic series 1LE1/1MB1/1PC1. With IP56, icing must be avoided.

Winding and motor protection

For monitoring the winding and bearings, the motors can be equipped with PTC thermistors, temperature sensors and resistance thermometers. Anti-condensation heaters can also be fitted to the marine motors to prevent condensation building up on the winding.

Paint finish

The standard paint finish is suitable for indoor installations or outdoor installations which are roof-protected against weathering.

When installing the standard motors in sea air or in rooms with permanent moisture, the special paint type climate group "world-wide" according to IEC 60721-2-1 is appropriate, because this ensures a higher degree of corrosion protection. Most marine motors are finished in this special paint type as standard (see "Special versions").

With particularly corrosive atmospheres, the sea-air-resistant special paint finish C4 (order code **S03**) or the offshore special paint system C5 (order code **S04**) is recommended.

Special paint colors and increased layer thicknesses are available on request.

Converter operation

The standard insulation of the motors is designed such that converter operation is permissible at line voltages up to $U_{rated} \leq 500$ V. The following limit values (voltage values are peak values) must be maintained: $U_{phase-to-phase} \leq 1500$ V, $U_{phase-to-ground} \leq 1100$ V, voltage rise times of $t_s > 0.1$ μs. Operation of motors at higher voltage peaks (e.g. on converters with controlled input, e.g. AFE, ALM) requires motors with higher insulation resistance. Please inquire in this case.

During installation, the EMC guidelines must be complied with. This does not apply to motors in type of protection Ex eb according to IEC/EN 60079-2 that are certified only for line operation.

It is important to note the extent to which the converter used must also be acceptance tested by the marine classification authority.

Technical specifications (continued)**Recommended special versions**

- Motor protection with 1 or 3 PTC thermistors – for tripping (2 terminals) – 15th position of the Article No. **B**
- Installation of Pt100 resistance thermometers for winding temperature monitoring – 16th position of the Article No. **"H"**
- Specially for motor series 1LA8, 1PQ8 and 1LL8: Installation of 2 Pt100 screw-in resistance thermometers in basic circuit for roller bearings – order code **A72**
- Anti-condensation heating for 230 V – order code **Q02**
- Anti-condensation heating for 115 V – order code **Q03**
- IP56 degree of protection for protection against harmful dust deposits, protection against water jets from any direction – order code **H22**
- IP65 degree of protection for complete protection against dust deposits, protection against water jets from any direction – order code **H20**
Not possible for 1LA8, 1PQ8 and 1LL8 non-standard motors
- Special bearing for drive-end (DE) and non-drive-end (NDE), bearing size 63 – order code **L25**, for non-standard motors on request
- Metal external fan for self-ventilated motors – order code **F76** (standard with order code **E31**)

Additional notes**Order information**

The fees levied by the classification societies for individual acceptance testing are included in order code **B10** for motor types 1LE1, 1MB1, 1PC1 and 1PC3.

When ordering, add the supplement **-Z** to the Article No. and state details in plain text if required.

For information about other special versions, refer to the appropriate sections under "SIMOTICS GP/SD 1LE1/1PC1 standard motors" and "SIMOTICS XP 1MB1 explosion-proof motors".

In addition to this, for marine motors, the following special versions are the "Standard version" and therefore included in the order codes for the basic marine version.

Standard version:

Designation	Order code
Acceptance test certificate 3.1 in accordance with EN 10204	B02
Note: The delivery time for the factory test certificate may differ from the delivery time for the motor.	
External grounding terminal	H04

Ordering example

Selection criteria	Requirement	Structure of the Article No.

NEMA motors

Motors according to NEMA standard

NEMA motors (National Electrical Manufacturers Association) for the North American market distinguish themselves as a result of their new design – and especially as a result of their efficiency. Siemens offers a complete line of General Purpose motors (aluminum and cast-iron design), Severe Duty motors, IEEE 841 and XP motors with NEMA Premium or higher efficiencies. Energy-saving motors with NEMA Premium efficiency class comply with the US EISA legislation (Energy Independence and Security Act) for minimum efficiencies. Our NEMA Premium + efficiency class exceeds the efficiencies specified in the EISA standards.

The motors are mechanically and electrically compliant with NEMA MG1. In addition to the minimum efficiencies specified in the US, these motors also fulfill the minimum efficiency requirements for Canada (CSA) and Mexico (NOM).

General technical specifications

Voltage and power range	208 ... 230/460 V, 575 V, 60 Hz 1 ... 400 hp (0.75 ... 300 kW)
Frame sizes and types	NEMA frame sizes 140 ... 440
Pole number and frequencies	2, 4, 6 and 8-pole, 60 Hz
Environmental conditions	Surface-cooled with degree of protection IP54/IP55

Customer benefits

Copper die-cast rotors optimize the efficiency

Copper die-cast rotors reduce the power loss and slightly reduce the motor length. This version reduces the motor life cycle costs as a result of the lower energy consumption.

Can be easily modified for high versatility

Unmounted feet (aluminum housing) or 8-hole foot mounting (cast-iron housing) make it easier to modify the motors, ensure a high degree of versatility and reduce inventory costs – for the OEM as well as for servicing and maintenance.

A design that fulfills each and every requirement

We offer motors suitable for any application in a lightweight aluminum design or with a rugged cast-iron housing. Both variants are available with NEMA Premium or NEMA Premium + efficiency. The perfect fit for any operating period.

Typical applications

NEMA motors are suitable throughout the industrial and commercial field, in the automotive, textile, printing and chemical industries as well as in cross-industry applications – for example in conveyor technology. The HVAC sector (Heating, Ventilating & Air Conditioning), for instance, which requires extremely light motors, provides typical applications for our so-called General Purpose motors – either with cast-iron or aluminum housings. Severe Duty motors in a fully cast-iron design are suitable for use under harsh environmental conditions – for instance in the pulp and paper industry. The Severe Duty SD100 IEEE 841 motor version even exceeds the stringent IEEE 841 standards applicable in the crude oil and chemical industries.

More information

Overview

Keep your business running and shaping your digital future – with Industry Services

Optimizing the productivity of your equipment and operations can be a challenge, especially with constantly changing market conditions. Working with our service experts makes it easier. We understand your industry's unique processes and provide the services needed so that you can better achieve your business goals.

You can count on us to maximize your uptime and minimize your downtime, increasing your operations' productivity and reliability. When your operations have to be changed quickly to meet a new demand or business opportunity, our services give you the flexibility to adapt. Of course, we take care that your production is protected against cyber threats. We assist in keeping your operations as energy and resource efficient as possible and reducing your total cost of ownership. As a trendsetter, we ensure that you can capitalize on the opportunities of digitalization and by applying data analytics to enhance decision making: You can be sure that your plant reaches its full potential and retains this over the longer lifespan.

You can rely on our highly dedicated team of engineers, technicians and specialists to deliver the services you need – safely, professionally and in compliance with all regulations. We are there for you, where you need us, when you need us.

Appendix

Industry Services

Industry Services – Portfolio overview

Overview

Digital Services

Digital Services make your industrial processes transparent to gain improvements in productivity, asset availability, and energy efficiency.

Production data is generated, filtered and translated with intelligent analytics to enhance decision-making.

This is done whilst taking data security into consideration and with continuous protection against cyber-attack threats.

<https://www.siemens.com/global/en/home/products/services/industry/digital-services.html>

Training Services

From the basics and advanced to specialist skills, SITRAIN courses provide expertise right from the manufacturer – and encompass the entire spectrum of Siemens products and systems for the industry.

Worldwide, SITRAIN courses are available wherever you need a training course in more than 170 locations in over 60 countries.

<https://support.industry.siemens.com/cs/ww/en/sc/2226>

Support and Consulting Services

Industry Online Support site for comprehensive information, application examples, FAQs and support requests.

Technical and Engineering Support for advice and answers for all inquiries about functionality, handling, and fault clearance. The Service Card as prepaid support for value added services such as Priority Call Back or Extended Support offers the clear advantage of quick and easy purchasing.

Information & Consulting Services, e.g. SIMATIC System Audit; clarity about the state and service capability of your automation system or Lifecycle Information Services; transparency on the lifecycle of the products in your plants.

<https://support.industry.siemens.com/cs/ww/en/sc/2235>

Spare Parts Services

Spare Parts Services are available worldwide for smooth and fast supply of spare parts – and thus optimal plant availability. Genuine spare parts are available for up to ten years. Logistic experts take care of procurement, transport, custom clearance, storage and order management. Reliable logistics processes ensure that components reach their destination as needed.

Since not all spare parts can be kept in stock at all times, Siemens offers a preventive measure for spare parts provisioning on the customer's premises with optimized **Spare Parts Packages** for individual products, custom-assembled drive components and entire integrated drive trains – including risk consulting.

Asset Optimization Services help you design a strategy for parts supply where your investment and carrying costs are reduced and the risk of obsolescence is avoided.

<https://support.industry.siemens.com/cs/ww/en/sc/2110>

Overview (continued)
Repair Services

Repair Services are offered on-site and in regional repair centers for fast restoration of faulty devices' functionality.

Also available are extended repair services, which include additional diagnostic and repair measures, as well as emergency services.

<https://support.industry.siemens.com/cs/ww/en/sc/2154>

Retrofit and Modernization Services

Provide a cost-effective solution for the expansion of entire plants, optimization of systems or upgrading existing products to the latest technology and software, e.g. migration services for automation systems.

Service experts support projects from planning through commissioning and, if desired over the entire extended lifespan, e.g. Retrofit for Integrated Drive Systems for an extended lifetime of your machines and plants.

<https://support.industry.siemens.com/cs/ww/de/sc/2286>

Field and Maintenance Services

Siemens specialists are available globally to provide expert field and maintenance services, including commissioning, functional testing, preventive maintenance and fault clearance.

All services can be included in customized service agreements with defined reaction times or fixed maintenance intervals.

<https://support.industry.siemens.com/cs/ww/en/sc/2265>

Service Programs and Agreements

A technical Service Program or Agreement enables you to easily bundle a wide range of services into a single annual or multi-year agreement.

You pick the services you need to match your unique requirements or fill gaps in your organization's maintenance capabilities.

Programs and agreements can be customized as KPI-based and/or performance-based contracts.

Online Support for Siemens Products for Industry

Siemens Industry and Online Support with some 1.7 million visitors per month is one of the most popular web services provided by Siemens. It is the central access point for comprehensive technical know-how about products, systems and services for automation and drives applications as well as for process industries.

In connection with the challenges and opportunities related to digitalization you can look forward to continued support with innovative offerings.

Partner at Siemens

At your service locally, around the globe for consulting, sales, training, service, support, spare parts on the entire portfolio of Digital Factory and Process Industries and Drives.

Your partner can be found in our Personal Contacts Database at: www.siemens.com/automation-contact

You start by selecting

- the required competence,
 - products and branches,
 - a country and a city
- or by a
- location search or free text search.

Easy product selection and ordering in the Industry Mall and with the Interactive Catalog CA 01

Industry Mall

The Industry Mall is a Siemens Internet ordering platform. Here you have a clear and informative online access to a huge range of products.

Powerful search functions make it easy to select the required products. Configurators enable you to configure complex product and system components quickly and easily. CAX data types are also provided here.

Data transfer allows the whole procedure, from selection through ordering to tracking and tracing, to be carried out online. Availability checks, customer-specific discounts and bid creation are also possible.

www.siemens.com/industrymall

Interactive Catalog CA 01 - Products for Automation and Drives

The Interactive Catalog CA 01 combined with the Siemens Industry Mall unites the benefits of offline and online media in one application – the performance of an offline catalog with the availability of manifold and up-to-date information on the Internet.

Select products and assemble orders with the CA 01, determine the availability of the selected products and track & trace via the Industry Mall.

Overview

The SIZER WEB ENGINEERING tool is used to engineer motors, converters/inverters and drive systems for a broad spectrum of applications within a wide power range starting below 1 kW up to 30 MW and above. To engineer a solution, you need to enter parameters for the motor, converter/inverter or the system – as well as parameters for your own specific application.

When the process is complete, you will receive comprehensive technical documentation (e.g. 3D models) including price information.

An inquiry function integrated in SIZER WEB ENGINEERING allows you to design special solutions for your drive task.

SIZER WEB ENGINEERING fully supports you from the inquiry stage, through the process of engineering products and drive systems, until your own individual quotation is ready. It supplies pricing information and then transfers the engineered products to your shopping cart in the Industry Mall. Seamless support during the engineering process enables you to save time and increase your productivity because you only need to enter the data once. You can use the entered data and the result as a basis for inquiries and orders.

SIZER WEB ENGINEERING is the platform for flexible engineering of your drive tasks and user-friendly management of your projects in conjunction with the engineering tools Drive Technology Configurator and SIZER for Siemens Drives.

Function

You can quickly find a solution for your drive task with the web-based tool: Menu-prompted workflows navigate you through the technical selection and dimensioning of products and drive systems, including the accessories. Based on an integrated inquiry functionality, SIZER WEB ENGINEERING also offers you special customized solutions for applications which cannot be addressed using "Standard Products", i.e. the focus is on flexibility and customized solutions.

Furthermore, you can engineer high-voltage motors, medium-voltage systems and rectifiers for your projects in addition to products from the low-voltage range. Integral tool functions also include comprehensive documentation such as data sheets, start-up calculations for low and high-voltage motors, 2D dimensional drawings and 3D CAD models, offer documentation to name just a few.

Access to the engineering tool

SIZER WEB ENGINEERING is available at the following website after registration and release:
www.siemens.com/sizer-we

Drive Technology Configurator selection tool

Overview

The Drive Technology (DT) Configurator supports you when configuring the optimum drive technology products for your application – from gear units, motors, inverters as well as the associated options and components through to controllers, software licenses and connection systems. With or without detailed knowledge of products: Preselected product groups, targeted navigation through selection menus and direct product selection through entry of the article number support quick, efficient and convenient configuration.

In addition to all this, comprehensive documentation comprising technical data sheets, 2D/3D dimensional drawings, operating instructions, certificates, etc. can be selected in the DT Configurator. Immediate ordering is possible by simply transferring a parts list to the shopping cart of the Industry Mall.

Drive Technology Configurator for efficient drive configuration with the following functions

- Fast, efficient configuration of drive products and associated components – gear units, motors, inverters, controllers, connection systems
- Configuration of drive systems for pump, fan and compressor applications from 1 kW to 2.6 MW
- Displayable documentation for configured products and components, such as
 - Data sheets in up to 7 languages in PDF or RTF format
 - 2D/3D dimensional drawings in various formats
 - Terminal box drawing and terminal connection diagram
 - Operating instructions
 - Certificates
 - Start-up calculation for SIMOTICS motors
 - EPLAN macros
- Support with retrofitting in conjunction with Spares On Web (www.siemens.com/sow)
- Ability to order products directly in the Siemens Industry Mall

Access to the Drive Technology Configurator

The Drive Technology Configurator can be called up without registration and without a login:

www.siemens.com/dt-configurator

Interactive Catalog CA 01 on DVD-ROM including Drive Technology Configurator, English	E86060-D4001-A510-D8-7600

More information

Online access to Drive Technology Configurator

More information about the Drive Technology Configurator is available on the Internet at:

www.siemens.com/dtconfigurator

Offline access to the Drive Technology Configurator in the Interactive Catalog CA 01

In addition, the Drive Technology Configurator is also included in the Interactive Catalog CA 01 on DVD-ROM - the offline version of the Siemens Industry Mall.

The Interactive Catalog CA 01 can be ordered from the relevant Siemens sales office or via the Internet:

www.siemens.com/automation/CA01

Overview

The SinaSave energy efficiency tool determines energy saving potential and amortization times based on your individual conditions of use and therefore offers practical assistance in making decisions about investments in energy-efficient technologies.

In SinaSave Version 6.0 and higher, the drive systems to be compared and the relevant drive component parameters are displayed graphically. An additional expansion includes numerous comparison possibilities for different control types and comprehensive product combinations for drive solutions for pump and fan applications. In addition to SIMOTICS motors and SINAMICS converters/inverters, the product portfolio comprises SIRIUS controls, offering a comprehensive range of comparison possibilities – according to your individual requirements.

SinaSave offers numerous comparison scenarios:

- Comparison of drive systems for pump and fan-applications in the power range from 0.55 kW (low voltage) to 5.5 MW (medium voltage) for
 - Reactor control (fixed speed; motor and switchgear)
 - Bypass control (fixed speed; motor and switchgear)
 - Speed control (variable speed; motor and inverter)
- Comparison and evaluation of standard motors (incl. ignition protection motors) in different energy efficiency classes

SinaSave supports the evaluation of different product and system comparisons by

- Displaying the potential savings for energy and energy costs as well as CO₂ emissions
- Estimation of the amortization time
- Estimation of the individual total lifecycle costs
- Representation of the system power losses according to EN 50598-2 for full load and partial load
- Direct comparison of Siemens drives with the reference Power Drive System (PDS) described in EN 50598-2

Access to the SinaSave energy efficiency tool

SinaSave can be accessed without the need for registration or logging in:

www.automation.siemens.com/sinasave

More information

SIMOTICS EE-COMPARATOR

Overview

The SIMOTICS EE-COMPARATOR app enables you to calculate potential savings and amortization times by making direct comparisons between Siemens SIMOTICS low-voltage motors in line or converter operation. In line operation, motors with different IE classifications (IE1, IE2, IE3 and IE4) can be compared taking individual operating periods and motor loads into account. In the new module for converter operation, a sample pump application enables you to identify the most cost-effective drive system based on load profiles.

The Regulations module provides you with information about local minimum efficiency requirements (so-called MEPS - Minimum Efficiency Performance Standards) of low-voltage induction motors for selected countries.

You can send the results calculated by the SIMOTICS EE-COMPARATOR directly from the app by e-mail.

New with version V1.3.1:

- New module for calculating the most efficient drive system in converter operation
- Partial-load efficiency calculations have been added to the line operation module
- New countries:
 - Australia
 - Chile
 - Peru
 - Philippines
 - Saudi Arabia
 - Switzerland
 - South Africa
 - Taiwan

More information

Access to the SIMOTICS EE-COMPARATOR App:
www.siemens.com/simotics-ee-comparator

SIZER for Siemens Drives engineering tool

Overview

The following drives and controls can be engineered in a user-friendly way using the SIZER for Siemens Drives configuration tool:

- SIMOTICS low-voltage motors including servo geared motors
- SINAMICS low-voltage drive systems
- Motor starters
- SINUMERIK CNCs
- SIMOTION Motion Control System
- SIMATIC Technology

It provides support when selecting the technologies involved in the hardware and firmware components required for a drive task. SIZER for Siemens Drives covers the full range of operations required to configure a complete drive system, from basic single drives to complex multi-axis applications.

SIZER for Siemens Drives supports all of the engineering steps in a workflow:

- Configuring the power supply
- Designing the motor and gearbox, including calculation of mechanical transmission elements
- Configuring the drive components
- Compiling the required accessories
- Selecting the line-side and motor-side power options, e.g. cables, filters, and reactors

When SIZER for Siemens Drives was being designed, particular importance was placed on a high degree of usability and a universal, function-based approach to the drive application. The extensive user guidance makes using the tool easy. Status information keeps you continually informed about the progress of the configuration process.

The SIZER for Siemens Drives user interface is available in English, French, German and Italian.

The drive configuration is saved in a project. In the project, the components and functions used are displayed in a hierarchical tree structure.

The project view permits the engineering of drive systems and the copying/inserting/modifying of drives already configured.

The configuration process produces the following results:

- A parts list of the required components (export to Excel, use of the Excel data sheet for import to SAP)
- Technical specifications of the system
- Characteristic curves
- Comments on system reactions
- Mounting arrangement of drive and control components and dimensional drawings of motors
- Energy requirements of the configured application

These results are displayed in a results tree and can be reused for documentation purposes.

Support is provided by the technological online help menu:

- Detailed technical specifications
- Information about the drive systems and their components
- Decision-making criteria for the selection of components
- Online help in English, French, German, Italian, Chinese and Japanese

System requirements

- PG or PC with Pentium III min. 800 MHz (recommended > 1 GHz)
- 512 MB RAM (1 GB RAM recommended)
- At least 4.1 GB of free hard disk space
- An additional 100 MB of free hard disk space on the Windows system drive
- Screen resolution 1024 × 768 pixels (1280 × 1024 pixels recommended)
- Operating system:
 - Windows 7 Professional (32/64 bit)
 - Windows 7 Enterprise (32/64 bit)
 - Windows 7 Ultimate (32/64 bit)
 - Windows 7 Home (32/64 bit)
 - Windows 8.1 Professional (32/64 bit)
 - Windows 8.1 Enterprise (32/64 bit)
- Microsoft Internet Explorer V5.5 SP2

SIPLUS CMS condition monitoring systems for the continuous condition monitoring of motors

Overview

The SIPLUS CMS condition monitoring systems continuously monitor the condition of wear-prone drive components, such as motors. Depending on the system, individual motors can be monitored as well as complete drive trains, or even the entire plant. IEPE sensors are used for acquisition of the motor vibrations for analysis, visualization and archiving by SIPLUS CMS. Information is supplied regularly and event-driven – even in remote operation. SIPLUS CMS can also be retrofitted.

More information on SIPLUS CMS is available on the Internet at:
www.siemens.com/siplus-cms

- Aluminum series 1LE1003 self-ventilated	2/13
- Aluminum series 1LE1003 self-ventilated with increased power	2/16
- Cast-iron series 1LE1503/1LE1603 self-ventilated or forced-air cooled	2/17
- Cast-iron series 1LE1503/1LE1603 self-ventilated with increased power	2/24
• Motors with IE2 High Efficiency	2/26 ... 2/40
- Aluminum series 1LE1001 self-ventilated or forced-air cooled	2/26
- Aluminum series 1LE1001 self-ventilated with increased power	2/30
- Cast-iron series 1LE1501/1LE1601 self-ventilated or forced-air cooled	2/32
- Cast-iron series 1LE1501/1LE1601 self-ventilated with increased power	2/40
• Motors with IE1 Standard Efficiency	2/44 ... 2/52
- Aluminum series 1LE1002 self-ventilated or forced-air cooled	2/44
- Aluminum series 1LE1002 self-ventilated with increased power	2/47
- Cast-iron series 1LE1502 self-ventilated or forced-air cooled	2/48
- Cast-iron series 1LE1502 self-ventilated or forced-air cooled with increased power	2/52
SIMOTICS GP/SD motors VSD4000 line – reluctance motors for SINAMICS Converter	4/26 ... 4/28
• Motors with Super Premium Efficiency enclosed version	4/26 ... 4/28
- 1FP10.4 aluminum series self-ventilated	4/26
- 1FP15.4 cast-iron series self-ventilated	4/28
SIMOTICS GP/SD standard motors 1LE	12/1
SIMOTICS GP/SD VSD10 line Standard Motors for converter operation	4/60

S (continued)

SIMOTICS GP/SD VSD4000 line – reluctance motors for SINAMICS Converter	4/4
SIMOTICS motors	1/2
SIMOTICS SD Add motors next generation	3/10 ... 3/15
• Motors with IE4 Super Premium Efficiency	3/10 ... 3/11
- Cast-iron series 1LE5534 self-ventilated or forced-air cooled	3/10
- Cast-iron series 1LE5634 self-ventilated or forced-air cooled	3/11
• Motors with IE3 Premium Efficiency	3/14, 3/15
- Cast-iron series 1LE5533 self-ventilated or forced-air cooled	3/14
- Cast-iron series 1LE5633 self-ventilated or forced-air cooled	3/15
SIMOTICS SD motors next generation	3/1 ... 3/35
• Motors with IE4 Super Premium Efficiency	3/8, 3/9
- Cast-iron series 1LE5504 self-ventilated or forced-air cooled	3/8
- Cast-iron series 1LE5604 self-ventilated or forced-air cooled	3/9
• Motors with IE3 Premium Efficiency	3/12, 3/13
- Cast-iron series 1LE5503 self-ventilated or forced-air cooled	3/12
- Cast-iron series 1LE5603 self-ventilated or forced-air cooled	3/13
SIMOTICS SD motors with cast-iron housing	2/4
SIMOTICS SD Standard Motors next generation	3/1
SIMOTICS VSD motors for converter operation	4/1
SIMOTICS XP 1MB1 explosion-proof motors	5/1
SIMOTICS XP motors with cast-iron housing	5/5
SinaSave – Energy efficiency tool	7/13
SIPLUS CMS – condition monitoring systems for the continuous condition monitoring of motors	7/16
SIZER for Siemens Drives – Engineering tool	7/15
SIZER WEB ENGINEERING – Engineering Tool	7/11
Slide rails	2/117, 3/28, 4/50, 4/106, 5/47, 6/25
Smoke-extraction motors	6/3
Spare motors	2/117, 3/29, 4/51, 4/107, 5/47, 6/25
Special RAL colors	1/23
Special technology	1/99 ... 1/105, 5/9
• Backstop, protective cover	1/105
• HOG 9 DN 1024 I rotary pulse encoder	1/100
• HOG 10 D 1024 I rotary pulse encoder	1/103
• LL 861 900 220 rotary pulse encoder	1/99
• POG 9 rotary pulse encoder	1/101
• POG 10 rotary pulse encoder	1/102
• Sendix 5020 rotary pulse encoder	1/104
Special types of construction	1/51
Special versions	1/12, 2/102, 3/21, 4/41, 4/97, 5/38, 6/21, 6/46
Specifications of the individual classification societies	6/43
Standard Motors for Converter Operation – SIMOTICS GP/SD VSD10 line	4/60
Standard RAL colors	1/23
Standard shaft	1/54
Standard types of construction	1/51
Standards	1/25, 6/3
Steps for drive selection in the catalog	1/8
Steps for drive selection	1/7
Support – Online	7/8
System power loss	4/24

T

T-Drain – adjustable drainage of condensed water	1/77
Taper pins	2/117, 3/28, 4/50, 4/106, 5/47, 6/25
Technical specifications	4/3, 4/6, 4/61, 5/6, 6/4, 6/42
Temperature class	6/44
Temperature detector	1/38
Temperature sensor KTY 84-130	1/39
Temperature/time classes F200 and F300	6/3
Temperature/time classification	6/3
Terminal box position	2/100, 3/20, 4/39, 4/95, 5/36, 6/20
Terminal box	1/41
Terminal connection	1/47
Test certificates	1/24
Testing and test certificates	6/3
Thermal limit characteristic	4/9
Tolerances for electrical data	1/25
Tools and engineering	7/11
Torque limits	4/9, 4/64
TR CU product safety certificate EAC for Eurasian customs union	1/28
Train-compatible version	1/28
Transport	1/78
Type Approval	6/41
Type of protection Ex ec for use in Zone 2/22	5/6
Type of protection Ex ec for use in Zone 2	5/6
Type of protection Ex tb IIIC and Ex tc IIIB for use in Zones 21 and 22	5/6
Type test certificates	6/43
Type test	6/41
Types of construction	1/51, 2/90, 3/17, 4/32, 4/88, 5/30, 6/16
Types of protection	5/3

U

UL-safety	1/26
-----------------	------

V

Ventilation	1/36, 6/42
Versions of the SIMOTICS GP/SD VSD10 line motor series 1LE109, 1LE159	4/60
Vibration severity	1/56
VIK version	1/28, 5/14
Voltage	6/4
Voltages	1/29, 2/85, 3/16, 4/30, 4/86, 5/28, 6/15

W

Winding protection	6/44
Winding	1/33

Z

Zone 1 with type of protection Ex de IIC explosion-proof enclosure "d"	5/6
Zone 1 with type of protection Ex eb II increased safety "e"	5/6

Order codes for 1LE, 1MB1, 1PC motors

All options are listed alphanumerically according to order codes in the following table.

A list of all the options available arranged according to category can be found in Catalog Section 1 "Introduction", "Guide to selecting and ordering the motors".

Order code	Special versions	Category	For further information, see page
B01	Printed German/English Operating Instructions (compact) enclosed in each wire-lattice pallet	Packaging, safety notes, documentation and test certificates	2/107, 4/44, 4/100
B02	Acceptance test certificate 3.1 in accordance with EN 10204		2/107, 2/115, 3/26, 4/44, 4/48, 4/100, 4/104, 5/41, 5/45, 6/22, 6/24
B04	Printed German/English Operating Instructions enclosed		2/107, 2/115, 3/26, 4/44, 4/48, 4/100, 4/104, 5/41, 5/45, 6/22, 6/24
B07	Additional rating plate for voltage tolerance	Rating plate and additional rating plates	2/106, 2/115, 3/26, 6/22, 6/24
B10	Individual acceptance by marine classification society	Marine version – Acceptance/certification	6/46 ... 6/49
B13 <i>New!</i>	Without "Made in manufacturing country" marking	Packaging, safety notes, documentation and test certificates	3/26
B30	Version (IP55) for Zones 2 or 22, for non-conductive dust	Explosion-proof version	5/38, 5/42
B31	Design for Zone 2 in Ex nA IIB T3 Gc		5/38, 5/42
B40	Version for converter operation in basic version with operating data SINAMICS G120 with PM240-2.		5/38, 5/42
B41	Version for converter operation in basic version with operating data SINAMICS S150.	Version for converter operation	5/38, 5/42
B51 <i>New!</i>	Equivalent circuit diagram	Packaging, safety notes, documentation and test certificates	3/26
B52 <i>New!</i>	Starting diagram (torque vs. speed and current vs. speed)		3/26
B60	Document - Electrical datasheet		2/107, 2/115, 3/26, 4/44, 4/48, 4/100, 4/104
B61	Document - Order dimensional drawing		2/107, 2/115, 3/26, 4/44, 4/48, 4/100, 4/104
B65	Standard test (routine test) with acceptance		2/115, 3/26, 4/48, 4/104, 6/22, 6/24
B67 <i>New!</i>	Temperature test without acceptance		3/26
B68 <i>New!</i>	Temperature test with acceptance		3/26
B80 <i>New!</i>	Type test with heat run for vertical motors, without acceptance		3/27
B81 <i>New!</i>	Type test with heat run for vertical motors, with acceptance		3/27
		Marine version – Acceptance/certification	6/48
B82	Type test with heat run for horizontal motors, without acceptance	Packaging, safety notes, documentation and test certificates	2/115, 3/27
B83	Type test with heat run for horizontal motors, with acceptance		2/107, 2/115, 3/27, 4/44, 4/48, 4/100, 4/104, 5/41, 5/45, 6/22, 6/24
			Marine version – Acceptance/certification
B90 <i>New!</i>	"Basic" documentation package	Packaging, safety notes, documentation and test certificates	2/107, 2/115, 3/27, 4/44, 4/48, 4/100, 4/104, 5/41, 5/45, 6/22, 6/24
B91 <i>New!</i>	"Advanced" documentation package		2/107, 2/115, 3/27, 4/44, 4/48, 4/100, 4/104, 5/41, 5/45, 6/22, 6/24
B92 <i>New!</i>	"Projects" documentation package		2/107, 2/115, 3/27, 4/44, 4/48, 4/100, 4/104, 5/41, 5/45, 6/22, 6/24
B99	Wire-lattice pallet packaging		2/107, 4/44, 4/100, 5/41, 5/45
C02	VIK version	Version in accordance with standards and specifications	2/105, 2/113
		Explosion-proof version	5/38, 5/42
D01	CCC China Compulsory Certification	Version in accordance with standards and specifications	2/105, 2/113, 6/21
D02	Coolant temperature –50 to +40 °C	Coolant temperature and installation altitude	2/113, 3/25, 4/47, 4/103
D03	Coolant temperature –40 to +40 °C		2/105, 2/113, 3/25, 4/42, 4/47, 4/98, 4/103, 5/39, 5/44
D04	Coolant temperature –30 to +40 °C		2/105, 2/113, 3/25, 4/42, 4/47, 4/98, 4/103, 6/21, 6/23

Appendix

Indexes

Index of order codes

Order code	Special versions	Category	For further information, see page
D22	Motor without CE marking for export outside EEA (see EU Directive 640/2009)	Version in accordance with standards and specifications	2/105, 2/113, 3/25
D23	Motor exclusively for use in transportation equipment for passengers and freight transport corresponding to EVPG §1 dated February 27, 2008		3/25
D30	Electrical according to NEMA MG1-12		2/105, 2/113, 3/25
D31	Design according to UL with "Recognition Mark"		2/105, 2/113, 3/25
D32 <i>New!</i>	Ex certification for China		5/44
D33	KEMCO Korea Energy Efficiency Label		2/105, 2/113
D34	China Energy Efficiency Label		2/105, 2/113, 5/44
D35	Ex certificate EAC for the Eurasian customs union		5/39, 5/44
D37	IEC Ex certification		5/39, 5/44
D39	Version according to UL and CSA (Canadian regulation)		4/43, 4/47, 4/99, 4/103
D40	Canadian regulations (CSA)	Marine version – Basic version	2/105, 2/113, 3/25
D47	TR CU product safety certificate EAC for Eurasian customs union		2/105, 2/113, 3/25, 4/99, 4/103
E21	With type test certificate according to Lloyds Register (LR), CT 45 °C, temperature class 155 (F), utilized according to 155 (F)		6/46 ... 6/49
E31	With type test certificate according to Bureau Veritas (BV), CT 45 °C, temperature class 155 (F), utilized according to 155 (F)		6/46, 6/47, 6/49
E41	With type test certificate according to Registro Italiano Navale (RINA), CT 45 °C, temperature class 155 (F), utilized according to 155 (F)		6/46 ... 6/49
E46	With type test certificate according to Russian Maritime Register (RS), CT 45 °C, temperature class 155 (F), utilized according to 155 (F)		6/46 ... 6/49
E51	With type test certificate according to DNV GL Maritime, CT 45 °C, temperature class 155 (F), utilized according to 155 (F)		6/46 ... 6/49
E52	With type test certificate according to American Bureau of Shipping (ABS), CT 50 °C, temperature class 155 (F), utilized according to 155 (F)		6/46 ... 6/49
E54	With type test certificate according to Korean Register of Shipping (KR), CT 45 °C, temperature class 155 (F), utilized according to 155 (F)		6/46, 6/47, 6/49
F01	Mounting of holding brake (standard assignment)	Modular technology – Basic versions	2/104, 2/112, 3/23, 4/42, 4/46, 4/98, 4/102
F02	Mounting of brake for higher switching frequency (operating brake)		2/104, 4/42, 4/98
F04	Mounting of PRECIMA brake		2/112
F10	Brake supply voltage 24 V DC	Modular technology – Additional versions	2/104, 2/112, 3/23, 4/42, 4/46, 4/98, 4/102
F11	Brake supply voltage 230 V AC, 50/60 Hz		2/104, 2/112, 3/23, 4/42, 4/46, 4/98, 4/102
F12	Brake supply voltage 400 V AC, 50/60 Hz		2/104, 2/112, 3/23, 4/42, 4/46, 4/98, 4/102
F40	Backstop, counterclockwise motion blocked, clockwise direction of rotation		2/112, 3/23, 4/46
F41	Backstop, clockwise motion blocked, counterclockwise direction of rotation		2/112, 3/23, 4/46
F50	Mechanical manual brake release with lever (no locking)		2/104, 2/112, 4/42, 4/46, 4/98, 4/102
F70	Mounted separately driven fan	Modular technology – Basic versions	2/104, 2/112, 3/23, 4/42, 4/46, 4/98, 4/102, 5/39, 5/43
F74	Sheet metal fan cover		2/106, 2/115, 3/26, 4/43, 4/48, 4/99, 4/104
F75	Fan cover for textile industry		2/106, 4/43, 4/99
F76	Metal external fan	Heating and ventilation	2/106, 2/115, 4/43, 4/48, 4/99, 4/104, 5/40, 5/45
F77	Low-noise version for 2-pole motors with clockwise direction of rotation		2/104, 2/113, 3/24, 5/39, 5/44
F78	Low-noise version for 2-pole motors with counterclockwise direction of rotation		2/104, 2/113, 3/24, 5/39, 5/44
F90	Without external fan and without fan cover	Heating and ventilation	2/106, 2/115, 3/26, 4/43, 4/99, 6/22, 6/24
G01	Mounting of 1XP8012-10 (HTL) rotary pulse encoder	Modular technology – Basic versions	2/104, 2/112, 3/23, 4/42, 4/46, 4/98, 4/102
G02	Mounting of 1XP8012-20 (TTL) rotary pulse encoder		2/104, 2/112, 3/23, 4/42, 4/46, 4/98, 4/102
G04	Mounting of LL 861 900 220 rotary pulse encoder		2/104, 2/112, 3/24, 4/42, 4/46, 4/98, 4/102
G05	Mounting of HOG 9 DN 1024 I rotary pulse encoder	Special technology	2/104, 2/112, 3/24, 4/42, 4/46, 4/98, 4/102
G06	Mounting of HOG 10 D 1024 I rotary pulse encoder		2/104, 2/112, 3/24, 4/42, 4/46, 4/98, 4/102
G07	Mounting of POG 10D rotary pulse encoder (only in combination with separately driven fan or brake)		2/112, 3/24, 4/46, 4/102
G08	Mounting of POG9 rotary pulse encoder (only in combination with separately driven fan or brake)		2/112, 3/24, 4/46, 4/102

Index of order codes

Order code	Special versions	Category	For further information, see page
G11	Mounting of Kübler Sendix 5020 HTL, 1024 I rotary pulse encoder	Modular technology – Basic versions	2/104, 2/112, 3/23
G12	Mounting of Kübler Sendix 5020 TTL, 1024 I rotary pulse encoder		2/104, 2/112, 3/23
G15	Mounting of HOG 10 DN 1024 I rotary pulse encoder, terminal box moisture protection	Special technology	2/112, 3/24
G16	Mounting of HOG 10 DN 1024 I rotary pulse encoder, terminal box dust protection		2/112, 3/24
G30	Mounting of explosion-proof rotary pulse encoder for use in Zones 2, 21, and 22		5/39, 5/43
G40	Prepared for mounted components, centering hole only	Mechanical design and degrees of protection	2/104, 2/113, 4/42, 4/47, 4/98, 4/103
G41	Prepared for mountings with D12 shaft		2/104, 2/113, 3/24, 4/42, 4/47, 4/98, 4/103
G42	Prepared for mountings with D16 shaft		2/104, 2/113, 3/24, 4/42, 4/47, 4/98, 4/103
G43	Mechanical protection for encoder		2/104, 2/113, 3/24, 4/42, 4/47, 4/98, 4/103, 5/39, 5/44
H00	Protective cover		2/105, 2/113, 3/24, 4/42, 4/47, 4/98, 4/103, 5/39, 5/44, 6/21
H01	Screwed-on (instead of cast) feet		2/105, 2/113, 4/42, 4/47, 4/98, 4/103, 6/21, 6/23
H02	Vibration-proof version; vibration resistance to Class 3M4 according to IEC 60721-3-3:1994		2/105, 2/113, 3/24, 4/42, 4/47, 4/98, 4/103, 5/39, 5/44
H03	Condensation drainage holes		2/105, 2/113, 3/24, 4/42, 4/98, 5/39, 5/44
H04	External grounding	Motor connection and terminal boxes	2/102, 2/109, 4/41, 4/45, 4/97, 4/101, 6/21,
H07	Rust-resistant screws (externally)	Mechanical design and degrees of protection	2/105, 2/113, 3/24, 4/42, 4/47, 4/98, 4/103, 5/39, 5/44, 6/21, 6/23
H08	Terminal box on NDE	Motor connection and terminal boxes	2/102, 2/109, 3/21, 4/41, 4/45, 4/97, 4/101, 6/21, 6/23
H10	Housing with screw mounting	Mechanical design and degrees of protection	2/105, 4/42, 4/47
H20	IP65 degree of protection		2/105, 2/113, 3/24, 4/42, 4/47, 4/98, 4/103, 5/39, 5/44, 6/21, 6/23
H21	Degree of protection IP54		2/113, 3/24, 4/47, 4/103
H22	IP56 degree of protection		2/105, 2/113, 3/24, 4/42, 4/47, 4/98, 4/103, 5/39, 5/44, 6/21, 6/23
H23	Drive-end seal for flange-mounting motors, oil-tight to 0.1 bar		2/105, 2/113, 3/24, 4/42, 4/47, 4/98, 4/103, 5/39, 5/44
H25 <i>New!</i>	Viton sealing ring		3/24
H70	Second external grounding	Motor connection and terminal boxes	2/109, 3/21, 4/45, 4/101
L00	Vibration severity grade B	Balance and vibration severity	2/106, 2/114, 3/25, 5/40, 5/44, 6/21, 6/23
L01	Balancing without feather key		2/106, 2/114, 3/25, 4/43, 4/47, 5/40, 5/44, 6/21, 6/23
L02	Full-key balancing		2/106, 2/114, 3/25, 4/43, 4/47, 4/99, 4/103, 5/40, 5/44, 6/21, 6/23
L04	Shaft extension with standard dimensions, without feather keyway	Shaft and rotor	2/106, 2/114, 3/25, 4/43, 4/47, 4/99, 4/103, 5/40, 5/45, 6/22, 6/23
L05	Standard, cylindrical shaft extension (second shaft extension) NDE acc. to EN 50347		2/106, 2/114, 3/25, 4/43, 4/47, 4/99, 4/103, 5/40, 5/45, 6/22, 6/23
L06	Standard shaft made of stainless steel (e.g. 1.4021)		2/106, 2/114, 3/25, 4/43, 4/47, 4/99, 4/103, 5/40, 5/45
L07	Concentricity of shaft extension in accordance with DIN 42955 Tolerance R		2/106, 2/114, 3/25, 4/43, 4/47, 4/99, 4/103, 5/40, 5/45, 6/22, 6/24
L08	Concentricity of shaft extension, coaxiality, and linear movement in accordance with DIN 42955 Tolerance R for flange-mounting motors		2/106, 2/114, 3/25, 4/43, 4/47, 4/99, 4/103, 5/40, 5/45, 6/22, 6/24

Index of order codes

Order code	Special versions	Category	For further information, see page
L19	Regreasing device with M10 × 1 grease nipple according to DIN 71412-A	Bearings and lubrication	2/105, 2/114, 3/25, 5/44, 6/23
L20	Located bearing DE		2/105, 2/114, 3/25, 4/43, 4/47, 4/99, 4/103, 5/40, 5/44
L21	Located bearing NDE		2/105, 2/114, 4/43, 4/47, 4/99, 4/103, 5/40, 5/44
L22	Bearing design for increased cantilever forces		2/105, 2/114, 3/25, 4/43, 4/47, 4/99, 4/103, 5/40, 5/44, 6/21, 6/23
L23	Regreasing device		2/105, 2/114, 4/43, 4/47, 4/99, 4/103, 5/40, 5/44, 6/21, 6/23
L24 <i>New!</i>	Hot bearing grease		3/25
L25	Bearings reinforced at both ends for DE and NDE, bearing size 63		2/105, 2/114, 4/43, 4/47, 4/99, 4/103, 5/40, 5/44
L28	Reinforced bearings at both DE and NDE, DE bearing for increased cantilever forces		2/114, 4/47, 4/103
L30 <i>New!</i>	Drainage for used grease		3/25
L37 <i>New!</i>	Special version with higher speeds		3/25
L50	Bearing insulation DE	Mechanical design and degrees of protection	2/114, 3/25, 4/103, 6/21, 6/23
L51	Bearing insulation NDE		2/114, 3/25, 4/103, 5/44, 6/21, 6/23
L52	Grounding brush for converter operation		2/113, 3/24, 4/103
L90	Version suitable for railways IC 411, EN IEC 60349, without EN 45545, with external fan and fan cover in plastic		2/105
L91	Version suitable for railways IC 411, EN IEC 60349, with EN 45545, with external fan and fan cover in metal		2/105
L92	Version suitable for railways IC 418, EN IEC 60349, without EN 45545, without external fan and fan cover		2/105
M01	Connected in star for dispatch		2/107, 2/115, 3/27, 4/44, 4/48, 4/100, 4/104, 5/41, 5/45
M02	Connected in delta for dispatch		2/107, 2/115, 3/27, 4/44, 4/48, 4/100, 4/104, 5/41, 5/45
M10	Second rating plate, loose		2/106, 2/115, 3/26, 4/43, 4/48, 4/99, 4/104, 5/40, 5/45, 6/22, 6/24
M11	Rating plate, stainless steel		2/106, 2/115, 3/26, 4/43, 4/48, 4/99, 4/104, 5/40, 5/45
N01	Temperature class 155 (F), utilized according to 155 (F), with service factor	Windings and insulation	2/103, 2/110, 3/22
N02	Temperature class 155 (F), utilized acc. to 155 (F), with increased power		2/103, 2/110, 3/22
N03	Temperature class 155 (F), utilized acc. to 155 (F), with increased coolant temperature		2/103, 2/110, 3/22
N05	Temperature class 155 (F), utilized acc. to 130 (B), coolant temperature 45 °C, derating approx. 4 %		2/103, 2/110, 3/22, 5/38, 5/43
N06	Temperature class 155 (F), utilized acc. to 130 (B), coolant temperature 50 °C, derating approx. 8 %		2/103, 2/110, 3/22, 5/38, 5/43
N07	Temperature class 155 (F), utilized acc. to 130 (B), coolant temperature 55 °C, derating approx. 13 %		2/103, 2/110, 3/22, 5/38, 5/43
N08	Temperature class 155 (F), utilized acc. to 130 (B), coolant temperature 60 °C, derating approx. 18 %		2/103, 2/111, 3/22, 5/38, 5/43
N10	Temperature class 180 (H)		2/103, 2/111, 3/22
N11	Temperature class 180 (H) at rated power and max. CT 60 °C		2/103, 2/111, 3/22, 4/42, 4/46
N30	Increased air humidity/temperature with 30 to 60 g water per m ³ of air		2/103, 2/111, 3/22, 4/42, 4/46, 4/97, 4/102, 5/38, 5/43, 6/21, 6/23
N31	Increased air humidity/temperature with 60 to 100 g water per m ³ of air		2/103, 2/111, 3/22, 4/42, 4/46, 4/102, 5/39, 5/43
Q01	Measuring nipple for SPM shock pulse measurement for bearing inspection	Bearings and lubrication	2/105, 2/114, 3/25, 4/43, 4/47, 4/99, 4/103, 5/40, 5/44, 6/21, 6/23
Q02	Anti-condensation heating for 230 V (2 terminals)	Heating and ventilation	2/106, 2/115, 3/26, 4/43, 4/48, 4/99, 4/104, 5/40, 5/45
Q03	Anti-condensation heating for 115 V (2 terminals)		2/106, 2/115, 3/26, 4/43, 4/48, 4/99, 4/104, 5/40, 5/45
Q06 <i>New!</i>	Anti-condensation heating for 400 V (2 terminals)		3/26

Index of order codes

Order code	Special versions	Category	For further information, see page
Q11	1 or 3 PTC thermistors – for tripping (2 terminals)	Motor protection	2/102, 2/109, 3/21, 4/41, 4/45, 4/97, 4/101
Q12	2 or 6 PTC thermistors – for alarm and tripping (4 terminals)		2/102, 2/109, 3/21, 4/41, 4/45, 4/97, 4/101
Q23	1 KTY84-130 temperature sensor (2 terminals)		2/102, 2/109, 3/21, 4/41, 4/45, 4/97, 4/101
Q25	2 KTY84-130 temperature sensors (4 terminals)		2/102, 2/109, 3/21, 4/41, 4/45, 4/97, 4/101
Q31	3 bimetal sensors (NC contacts) for tripping (2 terminals)		2/102, 2/109, 3/21, 4/41, 4/45, 4/97, 4/101
Q32	6 bimetal sensors (NC contacts) for alarm and tripping (4 terminals)		2/102, 2/109, 3/21, 4/41, 4/45, 4/97, 4/101
Q33	3 bimetal sensors (NC contacts) for tripping (6 terminals)		2/102, 2/109, 3/21, 4/41, 4/45, 4/97, 4/101
Q34	6 bimetal sensors (NC contacts) for alarm and tripping (12 terminals)		2/102, 2/109, 3/21, 4/41, 4/45, 4/101
Q35	1 Pt1000 resistance thermometer (2 terminals)		2/102, 2/109, 3/21, 4/41, 4/45, 4/97, 4/101, 5/38, 5/42
Q36	2 Pt1000 resistance thermometers (4 terminals)		2/102, 2/109, 3/21, 4/41, 4/45, 4/97, 4/101, 5/38, 5/42
Q60	3 Pt100 resistance thermometers – 2-wire input (6 terminals)		2/102, 2/109, 3/21, 4/41, 4/45, 4/97, 4/101
Q61	6 Pt100 resistance thermometers – 2-wire input (12 terminals)		2/102, 2/109, 3/21, 4/41, 4/97
Q62	1 Pt100 resistance thermometers – 2-wire input (2 terminals)		2/102, 2/109, 3/21, 4/41, 4/45, 4/97, 4/101
Q63	3 Pt100 resistance thermometers – 3-wire input (9 terminals)		2/102, 2/109, 3/21, 4/41, 4/45, 4/97, 4/101
Q64	6 Pt100 resistance thermometers – 3-wire input (18 terminals)		2/102, 2/109, 3/21, 4/41, 4/45, 4/97, 4/101
Q72	2 Pt100 screw-in thermometers in basic configuration for bearings (2 terminals)		2/102, 2/109, 3/21, 4/41, 4/45, 4/97, 4/101, 5/42
Q78	2 Pt100 screw-in thermometers in 3-wire input for bearing (6 terminals)		2/102, 2/109, 3/21, 4/41, 4/45, 4/97, 4/101, 5/42
Q79	2 Pt100 double screw-in thermometers in 3-wire input for bearing (12 terminals)		2/102, 2/109, 3/21, 4/41, 4/45, 4/97, 4/101, 5/42
Q80	Extension of the liability for defects period by 12 months to a total of 24 months (2 years) from delivery	Extension of the liability for defects	2/115, 3/26, 4/48, 4/104
Q81 <i>New!</i>	Extension of the liability for defects period by 18 months to a total of 30 months (2.5 years) from delivery		3/26
Q82	Extension of the liability for defects period by 24 months to a total of 36 months (3 years) from delivery		2/115, 3/26, 4/48, 4/104
Q83 <i>New!</i>	Extension of the liability for defects period by 30 months to a total of 42 months (3.5 years) from delivery		3/26
Q84 <i>New!</i>	Extension of the liability for defects period by 36 months to a total of 48 months (4 years) from delivery		3/26
Q85 <i>New!</i>	Extension of the liability for defects period by 42 months to a total of 60 months (5 years) from delivery		3/26
R10	Rotation of the terminal box through 90°, entry from DE	Motor connection and terminal boxes	2/102, 2/109, 3/21, 4/41, 4/45, 4/97, 4/101, 5/38, 5/42
R11	Rotation of the terminal box through 90°, entry from NDE		2/102, 2/109, 3/21, 4/41, 4/45, 4/97, 4/101, 5/38, 5/42
R12	Rotation of the terminal box through 180°		2/102, 2/110, 3/22, 4/41, 4/45, 4/97, 4/101, 5/38, 5/42, 6/21, 6/23
R13	Terminal box in position 0°; connection from right		2/102, 4/41, 4/97, 6/21, 6/23
R14	One EMC cable gland		2/110, 3/22, 4/45, 4/101
R15	One metal cable gland		2/102, 2/110, 3/22, 4/41, 4/45, 4/97, 4/101
R16	EMC cable gland, maximum configuration		2/110, 3/22, 4/45, 4/101
R17	Stud terminal for cable connection, accessories pack (3 items)		2/110, 3/22, 4/101, 5/42
R18	Metal cable gland, maximum configuration		2/102, 2/110, 3/22, 4/41, 5/38, 5/42
R19	Saddle terminal for connection without cable lug, accessories pack		2/110, 3/22, 4/101, 5/42
R20	3 cables protruding, 0.5 m long		2/102, 2/110, 4/41, 4/97
R21	3 cables protruding, 1.5 m long		2/102, 2/110, 3/22, 4/41
R22	6 cables protruding, 0.5 m long		2/102, 2/110, 4/41, 4/97
R23	6 cables protruding, 1.5 m long		2/102, 2/110, 3/22, 4/41
R24	6 cables protruding, 3 m long		2/103, 2/110, 3/22, 4/41
R30	Reduction piece for M cable gland in accordance with British Standard, mounted on both cable entries		2/103, 2/110
R50	Larger terminal box		2/103, 2/110, 3/22, 4/41, 4/45, 4/97, 4/101, 5/38, 5/42
R51	Terminal box without cable entry opening		2/110, 3/22, 4/45, 4/101
R52	Drilled removable entry plate		2/110, 3/22, 4/45, 4/101

Appendix

Indexes

Index of order codes

Order code	Special versions	Category	For further information, see page
R53	Undrilled removable entry plate	Motor connection and terminal boxes	2/110, 3/22, 4/45, 4/101
R60	Auxiliary terminal box, aluminum		2/103
R62	Cast-iron auxiliary terminal box (small)		2/110, 3/22, 4/45, 4/102, 5/42
R63 <i>New!</i>	Larger cast-iron terminal box		3/22
R70	Motor connector Han-Drive 10e for 230 VΔ/400 VY		2/103, 4/41, 4/97
R71	Motor connector Han-Drive 10e EMC for 230 VΔ/400 VY		2/103, 4/41, 4/97
R72	Small motor connector CQ12 with EMC		2/103
R73	Small motor connector CQ12 without EMC	Colors and paint finish	2/103
R74	Silicone-free version		2/110, 3/22, 4/102
S00	Unpainted (only cast-iron parts primed)		2/104, 2/111, 3/23, 4/42, 4/46, 4/98, 4/102, 5/39, 5/43, 6/21, 6/23
S01	Unpainted, only primed		2/104, 2/111, 3/23, 4/42, 4/46, 4/98, 4/102, 5/39, 5/43, 6/21, 6/23
S02	Special paint finish C3		2/104, 2/111, 3/23, 4/42, 4/46, 4/98, 4/102, 5/39, 5/43, 6/23
S03	Special paint finish sea air resistant C4		2/104, 2/111, 3/23, 4/42, 4/46, 4/98, 4/102, 5/39, 5/43, 6/21, 6/23
S04	Special paint for use offshore C5		2/111, 3/23, 4/46, 4/102, 5/43
S05	Internal coating		2/104, 2/111, 3/23, 4/42, 4/46, 4/98, 4/102, 6/23
S06	Top coat polyurethane		2/104, 2/111, 3/23, 5/39, 5/43, 6/21, 6/23
Y50 and spec. power, CT ... °C or IA ... m above sea level	Temperature class 155 (F), utilized acc. to 130 (B), with higher coolant temperature and/or installation altitude	Windings and insulation	2/103, 2/111, 3/22, 5/39, 5/43
Y52 and spec. power, CT ... °C or IA ... m above sea level	Temperature class 155 (F), utilized according to 155 (F), other requirements		2/103, 2/111, 3/22
Y53 and paint finish RAL....	Paint finish in other standard RAL colors: RAL 1002, 1013, 1015, 1019, 2003, 2004, 3000, 3007, 5007, 5009, 5010, 5012, 5015, 5017, 5018, 5019, 6011, 6019, 6021, 7000, 7001, 7004, 7011, 7016, 7022, 7031, 7032, 7033, 7035, 9001, 9002, 9005	Colors and paint finish	2/104, 2/111, 3/23, 4/46, 4/98, 4/102, 5/39, 5/43, 6/21, 6/23
Y56 and paint finish RAL....	Paint finish in special RAL colors: For RAL colors, see "Special paint finish in special RAL colors"		2/104, 2/111, 3/23, 4/42, 4/46, 4/98, 4/102, 5/39, 5/43, 6/21, 6/23
Y58 and customer specifications	Non-standard cylindrical shaft extension, DE	Shaft and rotor	2/106, 2/114, 3/26, 4/43, 4/47, 4/99, 4/104, 5/40, 5/45, 6/22, 6/24
Y59 and customer specifications	Non-standard cylindrical shaft extension, NDE		2/106, 2/114, 3/26, 4/43, 4/47, 4/99, 4/104, 5/40, 5/45, 6/22, 6/24
Y60 and customer specifications	Special shaft steel		2/114, 3/26, 4/47, 4/104, 6/22, 6/24
Y61 and customer specifications	Non-standard threaded through hole (NPT or G thread)	Motor connection and terminal boxes	2/110, 3/22, 4/45, 4/102
Y68 and converter type	Operating data such as the B40 order code with alternative SINAMICS converter on the rating plate • G120 with PM230 • G120 with PM240 • G120C • G120P with PM230 • G120P with PM240-2 • G120P with PM240P-2 • G120P with PM330 • G130, G150, G180 • S120 (BLM/SLM) • V20 Operating data such as the B41 order code with alternative SINAMICS converter on the rating plate • S120 (ALM)	Version for converter operation	5/38, 5/42

Index of order codes

Order code	Special versions	Category	For further information, see page
Y70 • and customer specifications	Mounting of a special type of rotary pulse encoder	Special technology	4/46, 4/102
Y74 • and spec. speed rpm	Mounting of rotary pulse encoder HOG 10 DN 1024 I + FSL, (integrated centrifugal switch, speed ... rpm), terminal box moisture protection		2/112, 3/24
Y75 • and spec. power, CT ... °C or IA m above sea level	Temperature class 180 (H), utilized according to 155 (F)	Windings and insulation	2/103, 2/111, 3/22
Y76 • and spec. speed rpm	Mounting of rotary pulse encoder HOG 10 DN 1024 I + FSL, (integrated centrifugal switch, speed rpm), terminal box dust protection	Special technology	2/112, 3/24
Y79 • and spec. speed (max. 3) rpm	Mounting of rotary pulse encoder HOG 10 DN 1024 I + ESL 93, (integrated electronic speed switch, speed ... rpm), terminal box dust protection		2/112, 3/24
Y80 • and customer specifications	Additional rating plate with deviating rating plate data	Rating plate and additional rating plates	2/106, 2/115, 3/26, 5/40, 5/45, 6/22, 6/24
Y81 • and customer specifications	Separately driven fan with non-standard voltage and/or frequency	Heating and ventilation	2/115, 3/26, 4/104
Y82 • and customer specifications	Additional rating plate with customer specifications	Rating plate and additional rating plates	2/106, 2/115, 3/26, 4/43, 4/48, 4/99, 4/104, 5/40, 5/45, 6/22, 6/24
Y84 • and customer specifications	Additional information on rating plate and on package label (max. 20 characters)		2/106, 2/115, 3/26, 4/43, 4/48, 4/99, 4/104, 5/40, 5/45, 6/22, 6/24
Y85 • and customer specifications	Adhesive label, supplied loose (printed with: Article No., Serial No.; 2 lines of text)		2/106, 2/115, 3/26, 4/43, 4/48, 4/99, 4/104
Y98 • and customer specifications	Printed Operating Instructions (Compact) for explosion-proof motors enclosed in other official EU languages	Packaging, safety notes, documentation and test certificates	5/41, 5/45

Appendix

Metal surcharges

Explanation of the raw material/metal surcharges¹⁾

Surcharge calculation

To compensate for variations in the price of the raw materials silver, copper, aluminum, lead, gold, dysprosium²⁾ and/or neodym²⁾, surcharges are calculated on a daily basis using the so-called metal factor for products containing these raw materials. A surcharge for the respective raw material is calculated as a supplement to the price of a product if the basic official price of the raw material in question is exceeded.

The surcharges are calculated in accordance with the following criteria:

- Basic official price of the raw material
Basic official price from the day prior to receipt of the order or prior to release order (daily price) for³⁾
- Silver (sales price, processed)
- Gold (sales price, processed)
and for⁴⁾
- Copper (lower DEL notation + 1 %)
- Aluminum (aluminum in cables)
- Lead (lead in cables)
- Metal factor of the products
Certain products are displayed with a metal factor. The metal factor determines the official price (for those raw materials concerned) as of which the metal surcharges are applied and the calculation method used (weight or percentage method). An exact explanation is given below.

Structure of the metal factor

The metal factor consists of several digits; the first digit indicates whether the percentage method of calculation refers to the list price or a possible discounted price (customer net price) (L = list price / N = customer net price).

The remaining digits indicate the method of calculation used for the respective raw material. If no surcharge is added for a raw material, a "-" is used.

1st digit	List or customer net price using the percentage method
2nd digit	for silver (AG)
3rd digit	for copper (CU)
4th digit	for aluminum (AL)
5th digit	for lead (PB)
6th digit	for gold (AU)
7th digit	for dysprosium (Dy) ²⁾
8th digit	for neodym (Nd) ²⁾

Weight method

The weight method uses the basic official price, the daily price and the raw material weight. In order to calculate the surcharge, the basic official price must be subtracted from the daily price. The difference is then multiplied by the raw material weight.

The basic official price can be found in the table below using the number (1 to 9) of the respective digit of the metal factor. The raw material weight can be found in the respective product descriptions.

Percentage method

Use of the percentage method is indicated by the letters A-Z at the respective digit of the metal factor.

The surcharge is increased - dependent on the deviation of the daily price compared with the basic official price - using the percentage method in "steps" and consequently offers surcharges that remain constant within the framework of this "step range". A higher percentage rate is charged for each new step. The respective percentage level can be found in the table below.

Metal factor examples

Explanation of the raw material/metal surcharges for dysprosium and neodym (rare earths)

Surcharge calculation

To compensate for variations in the price of the raw materials silver¹⁾, copper¹⁾, aluminum¹⁾, lead¹⁾, gold¹⁾, dysprosium and/or neodym, surcharges are calculated on a daily basis using the so-called metal factor for products containing these raw materials. The surcharge for dysprosium and neodym is calculated as a supplement to the price of a product if the basic official price of the raw material in question is exceeded.

The surcharge is calculated in accordance with the following criteria:

- Basic official price of the raw material²⁾
Three-month basic average price (see below) in the period before the quarter in which the order was received or the release order took place (= average official price) for
- dysprosium (Dy metal, 99 % min. FOB China; USD/kg)
- neodym (Nd metal, 99 % min. FOB China; USD/kg)
- Metal factor of the products
Certain products are displayed with a metal factor. The metal factor indicates (for those raw materials concerned) the basic official price as of which the surcharges for dysprosium and neodym are calculated using the weight method. An exact explanation of the metal factor is given below.

Three-month average price

The prices of rare earths vary according to the foreign currency, and there is no freely accessible stock exchange listing. This makes it more difficult for all parties involved to monitor changes in price. In order to avoid continuous adjustment of the surcharges, but to still ensure fair, transparent pricing, an average price is calculated over a three-month period using the average monthly foreign exchange rate from USD to EUR (source: European Central Bank). Since not all facts are immediately available at the start of each month, a one-month buffer is allowed before the new average price applies.

Examples of calculation of the average official price:

Period for calculation of the average price:	Period during which the order/release order is effected and the average price applies:
Sep 2012 - Nov 2012	Q1 in 2013 (Jan - Mar)
Dec 2012 - Feb 2013	Q2 in 2013 (Apr - Jun)
Mar 2013 - May 2013	Q3 in 2013 (Jul - Sep)
Jun 2013 - Aug 2013	Q4 in 2013 (Oct - Dec)

Structure of the metal factor

The metal factor consists of several digits; the first digit is not relevant to the calculation of dysprosium and neodym.

The remaining digits indicate the method of calculation used for the respective raw material. If no surcharge is added for a raw material, a "-" is used.

1st digit	List or customer net price using the percentage method
2nd digit	for silver (AG) ¹⁾
3rd digit	for copper (CU) ¹⁾
4th digit	for aluminum (AL) ¹⁾
5th digit	for lead (PB) ¹⁾
6th digit	for gold (AU) ¹⁾
7th digit	for dysprosium (Dy)
8th digit	for neodym (Nd)

Weight method

The weight method uses the basic official price, the average price and the raw material weight. In order to calculate the surcharge, the basic official price must be subtracted from the average price. The difference is then multiplied by the raw material weight.

The basic official price can be found in the table below using the number (1 to 9) of the respective digit of the metal factor. Your Sales contact can inform you of the raw material weight.

Metal factor examples

----- 7 1

- No basis necessary
- No surcharge for silver
- No surcharge for copper
- No surcharge for aluminum
- No surcharge for lead
- No surcharge for gold
- Dysprosium acc. to weight, basic official price 300 €
- Neodym acc. to weight, basic official price 50 €

¹⁾ For a different method of calculation, refer to the separate explanation for these raw materials on the previous page.

1. General Provisions

By using this catalog you can acquire hardware and software products described therein from Siemens AG subject to the following Terms and Conditions of Sale and Delivery (hereinafter referred to as "T&C"). Please note that the scope, the quality and the conditions for supplies and services, including software products, by any Siemens entity having a registered office outside Germany, shall be subject exclusively to the General Terms and Conditions of the respective Siemens entity. The following T&C apply exclusively for orders placed with Siemens Aktiengesellschaft, Germany.

1.1 For customers with a seat or registered office in Germany

For customers with a seat or registered office in Germany, the following applies subordinate to the T&C:

- for installation work the "General Conditions for Erection Works – Germany"¹⁾ ("Allgemeine Montagebedingungen – Deutschland" (only available in German at the moment)) and/or
- for Plant Analytics Services the "Standard Terms and Conditions for Plant Analytics Services – for Customer in Germany"¹⁾ ("Allgemeine Geschäftsbedingungen für das Plant Analytics Services – für Kunden in Deutschland" (only available in German at the moment)) and/or
- for stand-alone software products and software products forming a part of a product or project, the "General License Conditions for Software Products for Automation and Drives for Customers with a Seat or registered Office in Germany"¹⁾ and/or
- for other supplies and/or services the "General Conditions for the Supply of Products and Services of the Electrical and Electronics Industry"¹⁾.
In case such supplies and/or services should contain Open Source Software, the conditions of which shall prevail over the "General Conditions for the Supply of Products and Services of the Electrical and Electronics Industry"¹⁾. A notice will be contained in the scope of delivery in which the applicable conditions for Open Source Software are specified. This shall apply mutatis mutandis for notices referring to other third party software components.

1.2 For customers with a seat or registered office outside Germany

For customers with a seat or registered office outside Germany, the following applies subordinate to the T&C:

- for Plant Analytics Services the "Standard Terms and Conditions for Plant Analytics Services"¹⁾ and/or
- for services the "International Terms & Conditions for Services"¹⁾ supplemented by "Software Licensing Conditions"¹⁾ and/or
- for other supplies of hard- and/or software the "International Terms & Conditions for Products"¹⁾ supplemented by "Software Licensing Conditions"¹⁾

1.3 For customers with master or framework agreement

To the extent our supplies and/or services offered are covered by an existing master or framework agreement, the terms and conditions of that agreement shall apply instead of T&C.

2. Prices

The prices are in € (Euro) ex point of delivery, exclusive of packaging.

The sales tax (value added tax) is not included in the prices. It shall be charged separately at the respective rate according to the applicable statutory legal regulations.

Prices are subject to change without prior notice. We will charge the prices valid at the time of delivery.

To compensate for variations in the price of raw materials (e.g. silver, copper, aluminum, lead, gold, dysprosium and neodym), surcharges are calculated on a daily basis using the so-called metal factor for products containing these raw materials. A surcharge for the respective raw material is calculated as a supplement to the price of a product if the basic official price of the raw material in question is exceeded.

The metal factor of a product indicates the basic official price (for those raw materials concerned) as of which the surcharges on the price of the product are applied, and with what method of calculation.

You will find a detailed explanation of the metal factor on the page headed "Metal surcharges".

To calculate the surcharge (except in the cases of dysprosium and neodym), the official price from the day prior to that on which the order was received or the release order was effected is used.

To calculate the surcharge applicable to dysprosium and neodym ("rare earths"), the corresponding three-month basic average price in the quarter prior to that in which the order was received or the release order was effected is used with a one-month buffer (details on the calculation can be found in the explanation of the metal factor).

3. Additional Terms and Conditions

The dimensions are in mm. In Germany, according to the German law on units in measuring technology, data in inches apply only to devices for export.

Illustrations are not binding.

Insofar as there are no remarks on the individual pages of this catalog - especially with regard to data, dimensions and weights given - these are subject to change without prior notice.

¹⁾ The text of the Terms and Conditions of Siemens AG can be downloaded at www.siemens.com/automation/salesmaterial-as/catalog/en/terms_of_trade_en.pdf

Appendix

Conditions of sale and delivery

4. Export regulations

We shall not be obligated to fulfill any agreement if such fulfillment is prevented by any impediments arising out of national or international foreign trade or customs requirements or any embargoes and/or other sanctions.

Export may be subject to license. We shall indicate in the delivery details whether licenses are required under German, European and US export lists.

Our products are controlled by the U.S. Government (when labeled with "ECCN" unequal "N") and authorized for export only to the country of ultimate destination for use by the ultimate consignee or end-user(s) herein identified. They may not be resold, transferred, or otherwise disposed of, to any other country or to any person other than the authorized ultimate consignee or end-user(s), either in their original form or after being incorporated into other items, without first obtaining approval from the U.S. Government or as otherwise authorized by U.S. law and regulations.

The export indications can be viewed in advance in the description of the respective goods on the Industry Mall, our online catalog system. Only the export labels "AL" and "ECCN" indicated on order confirmations, delivery notes and invoices are authoritative.

Products labeled with "AL" unequal "N" are subject to European / national export authorization. Products without label, with label "AL:N" / "ECCN:N", or label "AL:9X9999" / "ECCN: 9X9999" may require authorization from responsible authorities depending on the final end-use, or the destination.

If you transfer goods (hardware and/or software and/or technology as well as corresponding documentation, regardless of the mode of provision) delivered by us or works and services (including all kinds of technical support) performed by us to a third party worldwide, you must comply with all applicable national and international (re-)export control regulations.

If required for the purpose of conducting export control checks, you (upon request by us) shall promptly provide us with all information pertaining to the particular end customer, final disposition and intended use of goods delivered by us respectively works and services provided by us, as well as to any export control restrictions existing in this relation.

The products listed in this catalog may be subject to European/German and/or US export regulations. Any export requiring approval is therefore subject to authorization by the relevant authorities.

Errors excepted and subject to change without prior notice.

Further information can be obtained from our branch offices listed at www.siemens.com/automation-contact

<i>Digital: SIPART Controllers and Software</i>		MP 31	
Products for Weighing Technology		WT 10	
<i>Digital: Process Analytical Instruments</i>		AP 01	
<i>Digital: Process Analytics, Components for Continuous Emission Monitoring</i>		AP 11	
Low-Voltage Power Distribution and Electrical Installation Technology			
SENTRON · SIVACON · ALPHA		LV 10	
Protection, Switching, Measuring and Monitoring Devices, Switchboards and Distribution Systems			
Standards-Compliant Components for Photovoltaic Plants		LV 11	
Electrical Components for the Railway Industry		LV 12	
Power Monitoring Made Simple		LV 14	
Components for Industrial Control Panels according to UL Standards		LV 16	
3WT Air Circuit Breakers up to 4000 A		LV 35	
3VT Molded Case Circuit Breakers up to 1600 A		LV 36	
<i>Digital: SIVACON System Cubicles, System Lighting and System Air-Conditioning</i>		LV 50	
<i>Digital: ALPHA Distribution Systems</i>		LV 51	
ALPHA FIX Terminal Blocks		LV 52	
SIVACON S4 Power Distribution Boards		LV 56	
SIVACON 8PS Busbar Trunking Systems		LV 70	
<i>Digital: DELTA Switches and Socket Outlets</i>		ET D1	
Vacuum Switching Technology and Components for Medium Voltage		HG 11.01	
Motion Control			
SINUMERIK 840 Equipment for Machine Tools		NC 62	
SINUMERIK 808 Equipment for Machine Tools		NC 81.1	
SINUMERIK 828 Equipment for Machine Tools		NC 82	
SIMOTION Equipment for Production Machines		PM 21	
<i>Digital: Drive and Control Components for Cranes</i>		CR 1	
Power Supply			
SITOP Power supply		KT 10.1	
Safety Integrated			
Safety Technology for Factory Automation		SI 10	
SIMATIC HMI / PC-based Automation			
Human Machine Interface Systems/PC-based Automation		ST 80/ST PC	
SIMATIC Ident			
Industrial Identification Systems		ID 10	
SIMATIC Industrial Automation Systems			
Products for Totally Integrated Automation		ST 70	
SIMATIC PCS 7 Process Control System System components		ST PCS 7	
SIMATIC PCS 7 Process Control System Technology components		ST PCS 7 T	
Add-ons for the SIMATIC PCS 7 Process Control System		ST PCS 7 AO	
SIMATIC S7-400 advanced controller		ST 400	
SIMATIC NET			
Industrial Communication		IK PI	
SIRIUS Industrial Controls			
<i>Digital: SIRIUS Industrial Controls</i>		IC 10	

Information and Download Center

Digital versions of the catalogs are available on the Internet at:

www.siemens.com/industry/infocenter

There you'll find additional catalogs in other languages.

Please note the section "Downloading catalogs" on page "Online services" in the appendix of this catalog.

Digital: These catalogs are only available as a PDF.

Security information

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, systems, machines and networks.

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens' products and solutions constitute one element of such a concept.

Customers are responsible for preventing unauthorized access to their plants, systems, machines and networks. Such systems, machines and components should only be connected to an enterprise network or the internet if and to the extent such a connection is necessary and only when appropriate security measures (e.g. firewalls and/or network segmentation) are in place.

For additional information on industrial security measures that may be implemented, please visit
<https://www.siemens.com/industrialsecurity>

Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends that product updates are applied as soon as they are available and that the latest product versions are used. Use of product versions that are no longer supported, and failure to apply the latest updates may increase customer's exposure to cyber threats.

To stay informed about product updates, subscribe to the Siemens Industrial Security RSS Feed under
